

## Annex I to ED Decision 2018/001/R

### ‘Acceptable Means of Compliance (AMCs) and Guidance Material (GM) to Part-FCL Amendment 4’

The text of the amendment is arranged to show deleted text, new or amended text as shown below:

- (a) deleted text is ~~struck through~~;
- (b) new or amended text is highlighted in grey;
- (c) an ellipsis ‘[...]’ indicates that the rest of the text is unchanged.

#### 1. New AMC1 to FCL.025(a)(2) is inserted:

##### **‘AMC1 FCL.025(a)(2) Theoretical knowledge examinations for the issue of licences and ratings**

###### **COMPLETION OF THE AREA 100 KSA ASSESSMENT BEFORE FINAL EXAMINATION**

Before being recommended by an ATO to sit the final examination paper at the first attempt, an applicant for a professional licence should have successfully completed the applicable Area 100 KSA summative assessments and mental maths test at the ATO.’

#### 2. AMC1 FCL.310; FCL.515(b); FCL.615(b) is amended as follows:

The table of contents and all tables are deleted and replaced by the following:

##### **‘AMC1 FCL.310; FCL.515(b); FCL.615(b) Theoretical knowledge examinations**

###### **LEARNING OBJECTIVES FOR ATPL, CPL, IR, CB-IR(A) and EIR**

###### **(a) Aeroplanes and helicopters**

###### **GENERAL**

In the tables of this AMC, the applicable LOs for each licence or rating are marked with an ‘X’.

The LOs define the subject knowledge and applied knowledge, skills and attitudes that a student pilot should have assimilated during the theoretical knowledge course.

The LOs are intended to be used by an approved training organisation (ATO) when developing the Part-FCL theoretical knowledge elements of the appropriate course. It should be noted, however, that the LOs do not provide a ready-made ground training syllabus for individual ATOs, and should not be seen by organisations as a substitute for thorough course design. Adherence to the LOs should become part of the ATO’s compliance monitoring scheme as required by ORA.GEN.200(a)(6).

ATOs are required to produce a training plan for each of their courses based on the instructional systems design (ISD) methodology as specified in AMC2 ORA.ATO.230.

Additional guidance on the meaning and taxonomy of the verbs used in the LOs can be found in GM1 FCL.310, FCL.515(b), and FCL.615(b).

**TRAINING AIMS**

After completion of the training, a student pilot should:

- be able to understand and apply the subject knowledge in order to be able to identify and manage threats and errors effectively;
- meet at least the Area 100 KSA minimum standard.

**INTERPRETATION**

The abbreviations used are ICAO abbreviations listed in ICAO Doc 8400 'ICAO Abbreviations and Codes', or those listed in GM1 FCL.010.

Where an LO refers to a definition, e.g. 'Define the following terms' or 'Define and understand' or 'Explain the definitions in ...', candidates are also expected to be able to recognise a given definition.

Below is a table showing the short references to applicable legislation and standards:

| Reference   | Legislation/Standard  |
|---|---|
| The Basic Regulation                                | Regulation (EC) No 216/2008 of the European Parliament and of the Council of 20 February 2008 (as amended)  |
| The Aircrew Regulation                              | Commission Regulation (EU) No 1178/2011 of 3 November 2011 (as amended)   |
| Part-FCL  | Annex I to Commission Regulation (EU) No 1178/2011 of 3 November 2011 (as amended)  |
| Part-MED  | Annex IV to Commission Regulation (EU) No 1178/2011 of 3 November 2011 (as amended)   |
| CS-23, CS-25, CS-27, CS-29, CS-E and CS-Definitions | Refer to the CS parts in Book 1 of the correspondingly numbered EASA Certification Specifications   |
| AMC-23, AMC-25, etc.                                | Refer to the AMC parts in Book 2 of the correspondingly numbered EASA Certification Specifications  |
| Single European Sky Regulations                     | <p>Regulation (EC) No 549/2004 of the European Parliament and of the Council of 10 March 2004 laying down the framework for the creation of the single European sky (the framework Regulation)</p> <p>Regulation (EC) No 550/2004 of the European Parliament and of the Council of 10 March 2004 on the provision of air navigation services in the single European sky (the service provision Regulation)</p> <p>Regulation (EC) No 551/2004 of the European Parliament and of the Council of 10 March 2004 on the organisation and use of the airspace in the single European sky (the airspace Regulation)</p> <p>Regulation (EC) No 552/2004 of the European Parliament and of the Council of 10 March 2004 on the interoperability of the European Air Traffic</p> |

|                             |   |
|-----------------------------|---|
|                             | Management network (the interoperability Regulation)  |
| Passenger Rights Regulation | Regulation (EC) No 261/2004 of the European Parliament and of the Council of 11 February 2004 establishing common rules on compensation and assistance to passengers in the event of denied boarding and of cancellation or long delay of flights, and repealing Regulation (EEC) No 295/91 |
| RTCA/EUROCAE                | <i>Refers to correspondingly numbered documents:</i><br>Radio Technical Commission for Aeronautics/<br>European Organisation for Civil Aviation Equipment   |
| ITU Radio Regulation        | International Telecommunication Union Radio Regulation  |
| NASA TM-85652               | National Aeronautics and Space Administration —<br>Technical Memorandum 85652   |

‘Applicable operational requirements’ means Annexes I, II, III, IV and V to Commission Regulation (EU) No 965/2012 of 5 October 2012 (as amended).

The General Student Pilot Route Manual (GSPRM) contains planning data plus aerodrome and approach charts that may be used in theoretical knowledge training courses. The guidelines on its content can be found in this AMC, in front of the LO table for Subject 033 ‘Flight planning and monitoring’.

Excerpts from any aircraft manuals including but not limited to CAP 696, 697 and 698 for aeroplanes, and CAP 758 for helicopters may be used in training. Where questions refer to excerpts from aircraft manuals, the associated aircraft data will be provided in the examinations.

Some numerical data (e.g. speeds, altitudes/levels and masses) used in questions for theoretical knowledge examinations may not be representative for helicopter operations, but the data is satisfactory for the calculations required.

*Note: In all subject areas, the term ‘mass’ is used to describe a quantity of matter, and ‘weight’ when describing the force. However, the term ‘weight’ is normally used in aviation to colloquially describe mass. The pilot should always note the units to determine whether the term ‘weight’ is being used to describe a force (e.g. unit newton) or quantity of matter (e.g. unit kilogram).’*

#### DETAILED THEORETICAL KNOWLEDGE SYLLABUS AND LOs FOR ATPL, CPL, IR, CB-IR(A) and EIR

##### GENERAL

The detailed theoretical knowledge syllabus outlines the topics that should be taught and examined in order to meet the theoretical knowledge requirements appropriate to ATPL, MPL, CPL, IR, CB-IR(A) and EIR.

For each topic in the detailed theoretical knowledge syllabus, one or more LOs are set out in the appendices as shown below:

- Appendix 010 AIR LAW
- Appendix 021 AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT
- Appendix 022 AIRCRAFT GENERAL KNOWLEDGE — INSTRUMENTATION
- Appendix 031 FLIGHT PERFORMANCE AND PLANNING — MASS AND BALANCE

- Appendix 032 FLIGHT PERFORMANCE AND PLANNING — PERFORMANCE — AEROPLANES
- Appendix 033 FLIGHT PERFORMANCE AND PLANNING — FLIGHT PLANNING AND MONITORING
- Appendix 034 FLIGHT PERFORMANCE AND PLANNING — PERFORMANCE — HELICOPTERS
- Appendix 040 HUMAN PERFORMANCE AND LIMITATIONS
- Appendix 050 METEOROLOGY
- Appendix 061 NAVIGATION — GENERAL NAVIGATION
- Appendix 062 NAVIGATION — RADIO NAVIGATION
- Appendix 070 OPERATIONAL PROCEDURES
- Appendix 081 PRINCIPLES OF FLIGHT — AEROPLANES
- Appendix 082 PRINCIPLES OF FLIGHT — HELICOPTERS
- Appendix 090 RADIO COMMUNICATIONS (RESERVED)
- Appendix AREA 100 KNOWLEDGE, SKILLS AND ATTITUDES (KSA)

**3. New GM1 to FCL.310; FCL.515(b); FCL.615(b) is inserted:**

**‘GM1 FCL.310; FCL.515(b); FCL.615(b) Theoretical knowledge examinations**

**EXPLANATION OF THE VERBS USED IN THE BENJAMIN BLOOM TAXONOMY**

- (a) The depth or level of learning to be achieved during the training and the corresponding level of attainment to be examined or assessed is based on the following taxonomy. In each case, the level of knowledge or skill is signified by the learning objective (LO) verb.
- (b) The majority of the LOs relate to the cognitive domain. The taxonomy described by B. Bloom (1956) and Anderson & Krathwohl (2001) has been used as the standard.
- (c) The six sequential increasing levels of required cognitive learning are identified by the LO verb. Hence the lowest level ‘remember’ is signified by verbs such as ‘state’, ‘list’, ‘define’ and ‘recall’ whilst the next higher level of ‘understand’ is signified by verbs such as ‘describe’ and ‘explain’. The third level of ‘apply’ is signified by the verbs ‘calculate’, ‘interpret’, ‘relate’ and ‘solve’. However, the higher levels of ‘analyse’, which would be signified by the verbs ‘plan’ or ‘discuss’ and ‘evaluate’ and ‘create’ are less common due at least partially to questions presently possible in the ECQB examination.
- (d) The LOs used in Area 100 KSA differ in that they require a combination of knowledge and skills. However, the ‘skill’ level does not relate to Bloom’s psychomotor taxonomy but is more closely aligned to the higher taxonomy levels required in medicine, because knowledge and skills must be combined by the student pilot in a strategy.
- (e) The verbs ‘demonstrate’ and ‘show’, with their meanings defined below, have therefore been used to supplement the cognitive LO verbs for the Area 100 KSA LOs.
  - (1) ‘Demonstrate’ means the selection and use of the appropriate knowledge, skills and attitudes within a strategy to achieve an effective outcome. It signifies a high taxonomy level and would normally be assessed using multiple indicators from more than one core competency.
  - (2) ‘Show’ means the attainment of knowledge, skill or attitude. It signifies a lower taxonomy level than ‘demonstrate’ and would normally be assessed by a single indicator.’

**4. AMC1 FCL.615(b) 'IR — Theoretical knowledge and flight instruction' is amended as follows:**

**'AMC1 FCL.615(b) IR — Theoretical knowledge and flight instruction**

**SYLLABUS OF THEORETICAL KNOWLEDGE FOR THE IR FOLLOWING THE COMPETENCY-BASED MODULAR COURSE AND EIR**

- (a) ~~The following tables contain the detailed theoretical knowledge syllabus for the IR following the competency-based modular route (IR(A)) and the EIR. The syllabus for the theoretical knowledge instruction and examination for the ATPL, MPL, CPL and IR in AMC1 FCL.310, FCL.515(b) and FCL.615(b) should be used for the CB-IR(A) and the EIR respectively.~~
- (b) Aspects related to threat and error management (TEM) ~~non-technical skills~~ should be included in an integrated manner, taking into account the particular risks associated to the licence and the activity.
- (c) An applicant who has completed a modular IR(A) course according to Appendix 6 Section A and passed the IR(A) theoretical knowledge examination should be fully credited towards the requirements of theoretical knowledge instruction and examination for a competency-based IR(A) or EIR within the validity period of the examination. An applicant wishing to transfer to a competency-based IR(A) or EIR course during a modular IR(A) course should be credited towards the requirements of theoretical knowledge instruction and examination for a competency-based IR(A) or EIR for those subjects or theory items already completed.
- (d) An applicant for an IR(A), who has completed an EIR theoretical knowledge course and passed the EIR theoretical knowledge examination according to FCL.825, should be fully credited towards the requirements of theoretical knowledge instruction and examination for a competency-based IR(A) according to Annex 6 Section Aa.

## 8. AMC2 FCL.825(d) 'En-route instrument rating (EIR)' is amended as follows:

## 'AMC2 FCL.825(d) En-route instrument rating (EIR)

## THEORETICAL KNOWLEDGE INSTRUCTION AND EXAMINATION

## (a) GENERAL

The theoretical knowledge instruction and examination is the same as for the instrument rating following the competency-based modular course according to Appendix 6 Section Aa.

(b) THEORETICAL KNOWLEDGE

The applicant should complete an approved competency-based IR(A) or EIR theoretical knowledge (TK) course. The approved CB-IR(A) or EIR TK course may contain, ~~computer-based training, e-learning elements, interactive video, slide/tape presentation, learning carrels and other media as approved by the authority,~~ in suitable proportions:

- (1) classroom work;
- (2) lessons;
- (3) tutorials;
- (4) demonstrations, including those supported by demonstration equipment;
- (5) exercises carried out as groups or individuals and based on pre-flight and en-route planning, communications, presentations and projects;
- (6) exercises that use demonstration equipment or training devices;
- (7) directed study including workbook exercises or assignments;
- (8) aerodrome or aviation industry field trips;
- (9) computer-based training and e-learning elements;
- (10) progress tests; and
- (11) other training methods, media and tools approved by the competent authority.

Approved distance-learning (correspondence) courses may also be offered as part of the course. The minimum amount of classroom ~~teaching~~ instruction, as required by ORA.ATO.305, ~~has to be provided,~~ may include all of the above except item (b)(9).

The approved CB-IR(A) or EIR TK course hours should be divided between the subjects, as based on the ATO's course established through instructional systems design, and agreed upon between the competent authority and the ATO.

(c) THEORETICAL KNOWLEDGE EXAMINATION

The number of questions per subject, the distribution of questions and the time allocated to each subject ~~is~~are detailed in ~~AMC2 ARA.FCL.300(b)~~ AMC1 ARA.FCL.300(b).'

9. GM1 FCL.825(d) 'En-route instrument rating (EIR)' is amended as follows:

'GM1 FCL.825(d) En-route instrument rating (EIR)

DETAILED THEORETICAL KNOWLEDGE SYLLABUS AND LEARNING OBJECTIVES FOR EIR

For the detailed theoretical knowledge syllabus and learning objectives, refer to ~~GM1 FCL.615(b)~~ AMC1 FCL.310, FLC.515(b), FCL.615(b) and AMC1 FCL.615(b).'

10. AMC1 to Appendix 3 'Training courses for the issue of a CPL and an ATPL' is amended as follows:

'AMC1 to Appendix 3 Training courses for the issue of a CPL and an ATPL

**THEORETICAL KNOWLEDGE**

- (c) The 750 hours of instruction, which also cover the Area 100 KSA, may include ~~can include classroom work, interactive video, slide or tape presentation, learning carrels, computer-based training, and other media as approved by the competent authority,~~ in suitable proportions:

- (1) classroom work;
- (2) lessons;
- (3) tutorials;
- (4) demonstrations, including those supported by demonstration equipment;
- (5) exercises carried out as groups or individuals and based on pre-flight and en-route planning, communications, presentations and projects;
- (6) exercises that use demonstration equipment or training devices;
- (7) directed study including workbook exercises or assignments;
- (8) aerodrome or aviation industry field trips;
- (9) computer-based training and e-learning elements;
- (10) progress tests, Area 100 KSA assessments and mental maths test(s); and
- (11) other training methods, media and tools approved by the competent authority.

The 750 hours of instruction should be divided in such a way that in each subject the minimum hours are:

|                                       |              |
|---------------------------------------|--------------|
| (1) Air law                           | 40 35 hours  |
| (2) Aircraft general knowledge        | 80 100 hours |
| (3) Flight performance and planning   | 90 120 hours |
| (4) Human performance and limitations | 50 35 hours  |
| (5) Meteorology                       | 60 hours     |
| (6) Navigation                        | 150 90 hours |
| (7) Operational procedures            | 20 25 hours  |
| (8) Principles of flight              | 30 55 hours  |
| (9) Communications                    | 30 20 hours  |

Other subdivisions of hours may be agreed upon between the competent authority and the ATO.

**B. ATP modular theoretical knowledge course: aeroplanes**

- (a) The aim of this course is to train pilots who have not received the theoretical knowledge instruction during an integrated course to the level of theoretical knowledge required for the ATPL.
- (b) An approved course may contain in suitable proportions: ~~should include formal classroom work and may include the use of such facilities as interactive video, slide or tape presentation, learning carrels and computer-based training and other media distance learning (correspondence) courses as approved by the competent authority.~~

- (1) classroom work;

- (2) lessons;
- (3) tutorials;
- (4) demonstrations, including those supported by demonstration equipment;
- (5) exercises carried out as groups or individuals and based on pre-flight and en-route planning, communications, presentations and projects;
- (6) exercises that use demonstration equipment or training devices;
- (7) directed study including workbook exercises or assignments;
- (8) aerodrome or aviation industry field trips;
- (9) computer-based training and e-learning elements;
- (10) progress tests, Area 100 KSA assessments and mental maths test(s); and
- (11) other training methods, media and tools approved by the competent authority.

Approved distance-learning (correspondence) courses may also be offered as part of the course. The minimum amount of classroom instruction, as required by ORA.ATO.305, may include all of the above except item (b)(9).

- (c) The ATP modular training course should last 18 months. This period may be extended where additional training is provided by the ATO. The flight instruction and skill test need to be completed within the period of validity of the pass in the theoretical examinations.

### C. CPL/IR integrated course: aeroplanes

[...]

#### THEORETICAL KNOWLEDGE

- (c) The 500 hours of instruction, which also cover the Area 100 KSA, may include ~~can include classroom work, interactive video, slide or tape presentation, learning carrels, computer based training, and other media as approved by the competent authority,~~ in suitable proportions:

- (1) classroom work;
- (2) lessons;
- (3) tutorials;
- (4) demonstrations, including those supported by demonstration equipment;
- (5) exercises carried out as groups or individuals and based on pre-flight and en-route planning, communications, presentations and projects;
- (6) exercises that use demonstration equipment or training devices;
- (7) directed study including workbook exercises or assignments;
- (8) aerodrome or aviation industry field trips;
- (9) computer-based training and e-learning elements;
- (10) progress tests, Area 100 KSA assessments and mental maths test(s); and
- (11) other training methods, media and tools approved by the competent authority.

The 500 hours of instruction should be divided in such a way that in each subject the minimum hours are:

|     |                                   |              |
|-----|-----------------------------------|--------------|
| (1) | Air law                           | 30 25 hours  |
| (2) | Aircraft general knowledge        | 50 75 hours  |
| (3) | Flight performance and planning   | 60 80 hours  |
| (4) | Human performance and limitations | 15 20 hours  |
| (5) | Meteorology                       | 40 40 hours  |
| (6) | Navigation                        | 100 55 hours |
| (7) | Operational procedures            | 10 15 hours  |
| (8) | Principles of flight              | 25 35 hours  |
| (9) | Communications                    | 30 15 hours  |

Other subdivisions of hours may be agreed upon between the competent authority and the ATO.

**SECTION Aa IR(A) — COMPETENCY-BASED MODULAR FLYING TRAINING COURSE**

- (a) THEORETICAL KNOWLEDGE INSTRUCTION

- (1) The theoretical knowledge instruction may be given at an ~~ATO approved training organisation~~ conducting theoretical knowledge instruction only, in which case the ~~head of training HT~~ of that ~~ATO organisation~~ should supervise that part of the course.
- (2) ~~The required theoretical knowledge instruction for the IR following the competency-based route may contain computer-based training, e-learning elements, interactive video, slide/tape presentation, learning carrels and other media as approved by the authority, in suitable proportions. Approved distance learning (correspondence) courses may also be offered as part of the course. The minimum amount of classroom teaching has to be provided as required by ORA.ATO.305. The hours required for the theoretical knowledge instruction for the IR following the competency-based training route should be divided between the subjects and include the application of threat and error management (TEM) as based on the ATO's systems course design and agreed upon between the competent authority and the ATO.~~

An approved course, which also covers the Area 100 KSA, may contain in suitable proportions: ~~should include formal classroom work and may include the use of such facilities as interactive video, slide or tape presentation, learning carrels and computer-based training and other media distance learning (correspondence) courses as approved by the competent authority.~~

- (i) classroom work;
- (ii) lessons;
- (iii) tutorials;
- (iv) demonstrations, including those supported by demonstration equipment;
- (v) exercises carried out as groups or individuals and based on pre-flight and en-route planning, communications, presentations and projects;
- (vi) exercises that use demonstration equipment or training devices;
- (vii) directed study including workbook exercises or assignments;
- (viii) aerodrome or aviation industry field trips;
- (ix) computer-based training and e-learning elements;
- (x) progress tests, Area 100 KSA assessments and mental maths test(s); and
- (xi) other training methods, media and tools approved by the competent authority.

Approved distance-learning (correspondence) courses may also be offered as part of the course. The minimum amount of classroom instruction, as required by ORA.ATO.305, may include all of the above except item (a)(2)(ix).'

**Appendix to Annex I to ED Decision 2018/001/R**

**‘Acceptable Means of Compliance (AMCs) and Guidance Material (GM) to Part-FCL  
Amendment 4’**

**Appendix**

**‘SUBJECT 10 — AIR LAW’**

**to**

**AMC1 FCL.310; FCL.515(b); FCL.615(b)**

**‘Theoretical knowledge examinations’**

**SUBJECT 010 — AIR LAW**

*Note that the term ‘mass’ is used to describe a quantity of matter, and ‘weight’ when describing the force. However, the term ‘weight’ is normally used in aviation to colloquially describe mass. The professional pilot should always note the units to determine whether the term ‘weight’ is being used to describe a force (e.g. unit newton) or quantity of matter (e.g. unit kilogram).*

- (1) The subjects ‘Air law’ and ‘ATC procedures’ are primarily based on ICAO documentation and European Union regulations.
- (2) National law should not be taken into account for theoretical examination purposes; it should remain relevant though during practical training and operational flying.

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (02)                |    | Describe the operating environments where the risk of corrosion is increased and how to minimise the effects of the environmental factors.  | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Explain that aircraft have highly corrosive fluids on board as part of their systems and equipment.   | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | Explain fatigue, how it affects the useful life of an aircraft, and the effect of the following factors on the development of fatigue:<br>— corrosion;<br>— number of cycles;<br>— type of flight manoeuvres;<br>— stress level;<br>— level and quality of maintenance. | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 01 04 00</b> |    | <b><i>Intentionally left blank</i></b>  |           |     |            |      |     |    |                  |         |
| <b>021 01 05 00</b> |    | <b>Maintenance</b>  |           |     |            |      |     |    |                  |         |
| <b>021 01 05 01</b> |    | <b><i>Maintenance methods: hard-time and on-condition monitoring</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the following terms:<br>— hard-time or fixed-time maintenance;<br>— on-condition maintenance;<br>— condition monitoring.  | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 02 00 00</b> |    | <b>AIRFRAME</b>   |           |     |            |      |     |    |                  |         |
| <b>021 02 01 00</b> |    | <b>Attachment methods</b>   |           |     |            |      |     |    |                  |         |
| <b>021 02 01 01</b> |    | <b><i>Attachment methods and detecting the development of faulty attachments</i></b>  |           |     |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (01)                |    | Describe the following attachment methods used for aircraft parts and components:<br>— riveting;<br>— welding;<br>— bolting;<br>— pinning;<br>— adhesives (bonding);<br>— screwing.  | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Explain how the development of a faulty attachment between aircraft parts or components can be detected by a pilot during the pre-flight inspection.   | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 02 02 00</b> |    | <b>Materials</b>   |           |     |            |      |     |    |                  |         |
| <b>021 02 02 01</b> |    | <b>Composite and other materials</b>   |           |     |            |      |     |    |                  |         |
| (01)                | X  | Explain the principle of a composite material, and give examples of typical non-metallic materials used on aircraft:<br>— carbon;<br>— glass;<br>— Kevlar aramid;<br>— resin or filler.  | X         | X   | X          | X    | X   |    |                  |         |
| (02)                | X  | State the advantages and disadvantages of composite materials compared with metal alloys by considering the following:<br>— strength-to-weight ratio;<br>— capability to tailor the strength to the direction of the load;<br>— stiffness;<br>— electrical conductivity (lightning);<br>— resistance to fatigue and corrosion; | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | — resistance to cost;<br>— discovering damage during a pre-flight inspection.  |           |     |            |      |     |    |                  |         |
| (03)                |    | State that several types of materials are used on aircraft and that they are chosen based on type of structure or component and the required/desired material properties.          | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 02 03 00</b> |    | <b>Aeroplane: wings, tail surfaces and control surfaces</b>  |           |     |            |      |     |    |                  |         |
| <b>021 02 03 01</b> |    | <b>Design</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the following types of design and explain their advantages and disadvantages:<br>— high-mounted wing;<br>— low-mounted wing;<br>— low- or mid-set tailplane;<br>— T-tail. | X         | X   |            |      |     |    |                  |         |
| <b>021 02 03 02</b> |    | <b>Structural components</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the function of the following structural components:<br>— spar and its components (web and girder or cap);<br>— rib;<br>— stringer;<br>— skin;<br>— torsion box.          | X         | X   |            |      |     |    |                  |         |
| <b>021 02 03 03</b> |    | <b>Loads, stresses and aeroelastic vibrations (flutter)</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the vertical and horizontal loads on the ground and during normal flight.   | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Describe the vertical and horizontal loads during asymmetric flight following an engine failure for a multi-engine aeroplane,  | X         | X   |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | and how a pilot may potentially overstress the structure during the failure scenario.   |           |     |            |      |     |    |                  |         |
| (03)                |    | Explain the principle of flutter and resonance for the wing and control surfaces.   | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Explain the following countermeasures used to achieve stress relief and reduce resonance: <ul style="list-style-type: none"> <li>— chord-wise and span-wise position of masses (e.g. engines, fuel, balance masses for wing and control balance masses);</li> <li>— torsional stiffness;</li> <li>— bending flexibility;</li> <li>— fuel-balancing procedures during flight (automatic or applied by the pilot).</li> </ul> | X         | X   |            |      |     |    |                  |         |
| <b>021 02 04 00</b> |    | <b>Fuselage, landing gear, doors, floor, windscreen and windows</b>   |           |     |            |      |     |    |                  |         |
| <b>021 02 04 01</b> |    | <b>Construction, functions, loads</b>   |           |     |            |      |     |    |                  |         |
| (01)                | X  | Describe the following types of fuselage construction: <ul style="list-style-type: none"> <li>— monocoque,</li> <li>— semi-monocoque.</li> </ul>  | X         | X   | X          | X    | X   |    |                  |         |
| (01)                |    | Describe the construction and the function of the following structural components of a fuselage: <ul style="list-style-type: none"> <li>— frames;</li> <li>— bulkhead;</li> <li>— pressure bulkhead;</li> <li>— stiffeners, stringers, longerons;</li> <li>— skin, doublers;</li> <li>— floor suspension (crossbeams);</li> <li>— floor panels;</li> </ul>  | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                    |    | — firewall.  |           |     |            |      |     |    |                  |         |
| (03)               |    | Describe the loads on the fuselage due to pressurisation.  | X         | X   |            |      |     |    |                  |         |
| (04)               |    | Describe the following loads on a main landing gear:<br>— touch-down loads (vertical and horizontal);<br>— taxi loads on bogie gear (turns).                                   | X         | X   |            |      |     |    |                  |         |
| (05)               |    | Describe the structural danger of a nose-wheel landing with respect to:<br>— fuselage loads;<br>— nose-wheel strut loads.  | X         | X   |            |      |     |    |                  |         |
| (06)               |    | Describe the structural danger of a tail strike with respect to:<br>— fuselage and aft bulkhead damage (pressurisation).   | X         | X   |            |      |     |    |                  |         |
| (07)               |    | Describe the door and hatch construction for pressurised and unpressurised aeroplanes including:<br>— door and frame (plug type);<br>— hinge location;<br>— locking mechanism. | X         | X   |            |      |     |    |                  |         |
| (08)               | X  | Explain the advantages and disadvantages of the following fuselage cross sections:<br>— circular;<br>— double bubble;<br>— oval;<br>— rectangular.                             | X         | X   |            |      |     |    |                  |         |
| (09)               |    | Explain why flight-deck windows are constructed with different layers.   | X         | X   |            |      |     |    |                  |         |
| (10)               |    | Explain the function of window heating for structural purposes.  | X         | X   |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (11)                |    | Explain the implication of a direct-vision window (see CS 25.773(b)(3)).  | X         | X   |            |      |     |    |                  |         |
| (12)                |    | Explain the need for an eye-reference position.   | X         | X   |            |      |     |    |                  |         |
| (13)                |    | Explain the function of floor venting (blow-out panels).  | X         | X   |            |      |     |    |                  |         |
| (14)                |    | Describe the construction and fitting of sliding doors.   |           |     | X          | X    | X   |    |                  |         |
| <b>021 02 05 00</b> |    | <b>Helicopter: structural aspects of flight controls</b>  |           |     |            |      |     |    |                  |         |
| <b>021 02 05 01</b> |    | <b>Design and construction</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | List the functions of flight controls.  |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain why vertical and horizontal stabilisers may have different shapes and alignments.   |           |     | X          | X    | X   |    |                  |         |
| <b>021 02 05 02</b> |    | <b>Structural components and materials</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the fatigue life and methods of checking for serviceability of the components and materials of flight and control surfaces.  |           |     | X          | X    | X   |    |                  |         |
| <b>021 02 05 03</b> |    | <b>Loads, stresses and aeroelastic vibrations</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the dangers and stresses regarding safety and serviceability in flight when the manufacturer's design envelope is exceeded.  |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain that blade tracking is important both to minimise vibration and to help ensure uniformity of flow through the disc.   |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Describe the early indications and vibrations which are likely to be experienced when the main-rotor blades and tail rotor are out of balance or tracking, including the possible early indications due to possible fatigue and overload. |           |     | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (04)                |    | Explain how a vibration harmonic can be set up in other components which can lead to their early failure.  |           |     | X          | X    | X   |    |                  |         |
| (05)                |    | State the three planes of vibration measurement, i.e. vertical, lateral, fore and aft.   |           |     | X          | X    | X   |    |                  |         |
| <b>021 02 06 00</b> |    | <b>Structural limitations</b>  |           |     |            |      |     |    |                  |         |
| <b>021 02 06 01</b> |    | <b>Maximum structural masses</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Define and explain the following maximum structural masses:<br>— maximum ramp mass;<br>— maximum take-off mass;<br>— maximum zero fuel mass;<br>— maximum landing mass.<br><i>Remark: These limitations may also be found in the relevant part of Subjects 031 'Mass and balance', 032 'Performance (aeroplane)' and 034 'Performance (helicopter)'.</i> | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Explain that airframe life is limited by fatigue, created by alternating stress and the number of load cycles.   | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Explain the maximum structural masses:<br>— maximum take-off mass.   |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Explain that airframe life is limited by fatigue, created by load cycles.  |           |     | X          | X    | X   |    |                  |         |
| <b>021 03 00 00</b> |    | <b>HYDRAULICS</b>  |           |     |            |      |     |    |                  |         |
| <b>021 03 01 00</b> |    | <b>Hydromechanics: basic principles</b>  |           |     |            |      |     |    |                  |         |
| <b>021 03 01 01</b> |    | <b>Concepts and basic principles</b>   |           |     |            |      |     |    |                  |         |
| (01)                | X  | Explain the concept and basic principles of hydromechanics   | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | including:<br>— hydrostatic pressure;<br>— Pascal's law;<br>— the relationship between pressure, force and area;<br>— transmission of power: multiplication of force, decrease of displacement. |           |     |            |      |     |    |                  |         |
| <b>021 03 02 00</b> |    | <b>Hydraulic systems</b>  |           |     |            |      |     |    |                  |         |
| <b>021 03 02 01</b> |    | <b>Hydraulic fluids: types, characteristics, limitations</b>  |           |     |            |      |     |    |                  |         |
| (01)                | X  | List and explain the desirable properties of a hydraulic fluid with regard to:<br>— thermal stability;<br>— corrosiveness;<br>— flashpoint and flammability;<br>— volatility;<br>— viscosity.   | X         | X   | X          | X    | X   |    |                  |         |
| (02)                | X  | State that hydraulic fluids are irritating to skin and eyes.  | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | List the two different types of hydraulic fluids:<br>— synthetic;<br>— mineral.   | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | State that different types of hydraulic fluids cannot be mixed.   | X         | X   | X          | X    | X   |    |                  |         |
| (05)                | X  | State that at the pressures being considered, hydraulic fluid is considered incompressible.   | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 03 02 02</b> |    | <b>System components: design, operation, degraded modes of operation, indications and warnings</b>  |           |     |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (01)               |    | Explain the working principle of a hydraulic system.  | X         | X   | X          | X    | X   |    |                  |         |
| (02)               |    | Describe the difference in the principle of operation between a constant pressure system and a system pressurised only on specific demand.                              | X         | X   | X          | X    | X   |    |                  |         |
| (03)               |    | State the differences in the principle of operation between a passive hydraulic system (without a pressure pump) and an active hydraulic system (with a pressure pump). | X         | X   | X          | X    | X   |    |                  |         |
| (04)               | X  | List the main advantages and disadvantages of system actuation by hydraulic or purely mechanical means with respect to:<br>— weight;<br>— size;<br>— force.             | X         | X   | X          | X    | X   |    |                  |         |
| (05)               |    | List the main uses of hydraulic systems.  | X         | X   | X          | X    | X   |    |                  |         |
| (06)               |    | State that hydraulic systems can be classified as either high pressure (typically 3000 psi or higher) or low pressure (typically up to 2000 psi).                       | X         | X   | X          | X    | X   |    |                  |         |
| (07)               |    | State that a high-pressure hydraulic system is typically operating at 3000 psi but on some aircraft a hydraulic pressure of 4000 to 5000 psi may also be used.          | X         | X   | X          | X    | X   |    |                  |         |
| (08)               |    | Explain the working principle of a low-pressure (0–2000 psi) system.  | X         | X   | X          | X    | X   |    |                  |         |
| (09)               |    | Explain the advantages and disadvantages of a high-pressure system over a low-pressure system.  | X         | X   | X          | X    | X   |    |                  |         |
| (10)               |    | Describe the working principle and functions of pressure pumps including:<br>— constant pressure pump (swash plate or cam plate);                                       | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                    |    | — pressure pump whose output is dependent on pump revolutions per minute (rpm) (gear type).  |           |     |            |      |     |    |                  |         |
| (11)               |    | Explain the following different sources of hydraulic pressure, their typical application and potential operational limitations:<br>— manual;<br>— engine gearbox;<br>— electrical;<br>— air (pneumatic and ram-air turbine);<br>— hydraulic (power transfer unit) or reversible motor pumps;<br>— accessory.   | X         | X   |            |      |     |    |                  |         |
| (12)               |    | Explain the following different sources of hydraulic pressure, their typical application and potential operational limitations:<br>— manual;<br>— engine;<br>— gearbox;<br>— electrical.   |           |     | X          | X    | X   |    |                  |         |
| (13)               |    | Describe the working principle and functions of the following hydraulic system components:<br>— reservoir (pressurised and unpressurised);<br>— accumulators;<br>— case drain lines and fluid cooler return lines;<br>— piston actuators (single- and double-acting);<br>— hydraulic motors;<br>— filters;<br>— non-return (check) valves;<br>— relief valves; | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | <ul style="list-style-type: none"> <li>— torsion links;</li> <li>— locks (over centre);</li> <li>— gear doors.</li> </ul>   |           |     |            |      |     |    |                  |         |
| (03)                |    | Name the different components of a landing gear, using the diagram appended to these LOs (021).   | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | Describe the sequence of events during normal operation of the landing gear.  | X         | X   | X          | X    | X   |    |                  |         |
| (05)                |    | State how landing-gear position indication and alerting is implemented.   | X         | X   | X          | X    | X   |    |                  |         |
| (06)                |    | Describe the various protection devices to avoid inadvertent gear retraction on the ground and explain the implications of taking off with one or more protection devices in place: <ul style="list-style-type: none"> <li>— ground lock (pins);</li> <li>— protection devices in the gear retraction mechanism.</li> </ul> | X         | X   | X          | X    | X   |    |                  |         |
| (07)                |    | Explain the speed limitations for gear operation (VLO (maximum landing gear operating speed) and VLE (maximum landing gear extended speed)).  | X         | X   | X          | X    | X   |    |                  |         |
| (08)                |    | Describe the sequence for emergency gear extension: <ul style="list-style-type: none"> <li>— unlocking;</li> <li>— operating;</li> <li>— down-locking.</li> </ul>   | X         | X   | X          | X    | X   |    |                  |         |
| (09)                |    | Describe some methods for emergency gear extension including: <ul style="list-style-type: none"> <li>— gravity/free fall;</li> <li>— air or nitrogen pressure;</li> <li>— manually/mechanically.</li> </ul>   | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 04 02 00</b> |    | <b>Nose-wheel steering</b>  |           |     |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| <b>021 04 02 01</b> |    | <b>Design, operation</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the operating principle of nose-wheel steering.  | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Explain, for a helicopter, the functioning of differential braking with free-castoring nose wheel.   |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Describe, for an aeroplane, the functioning of the following systems:<br>— differential braking with free-castoring nose wheel;<br>— tiller or hand wheel steering;<br>— rudder pedal nose-wheel steering. | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Explain the centring mechanism of the nose wheel.  | X         | X   | X          | X    | X   |    |                  |         |
| (05)                |    | Define the term 'shimmy' and the possible consequences of shimmy for the nose- and the main-wheel system and explain the purpose of a shimmy damper to reduce the severity of shimmy.                      | X         | X   |            |      |     |    |                  |         |
| (06)                |    | Explain the purpose of main-wheel (body) steering.   | X         | X   |            |      |     |    |                  |         |
| <b>021 04 03 00</b> |    | <b>Brakes</b>  |           |     |            |      |     |    |                  |         |
| <b>021 04 03 01</b> |    | <b>Types and materials</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the basic operating principle of a disc brake.  | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | State the different materials used in a disc brake (steel, carbon).  | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Describe the characteristics, advantages and disadvantages of steel and carbon brake discs with regard to:<br>— weight;<br>— temperature limits;<br>— internal-friction coefficient;                       | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | — wear.  |           |     |            |      |     |    |                  |         |
| <b>021 04 03 02</b> |    | <b>System components, design, operation, indications and warnings</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the limitation of brake energy and describe the operational consequences.  | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Explain how brakes are actuated:<br>— hydraulically,<br>— electrically.  | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Explain the purpose of an in-flight wheel brake system.  | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Describe the function of a brake accumulator.  | X         | X   | X          | X    | X   |    |                  |         |
| (05)                |    | Describe the function of the parking brake.  | X         | X   | X          | X    | X   |    |                  |         |
| (06)                |    | Explain the function of brake-wear indicators.   | X         | X   |            |      |     |    |                  |         |
| (07)                |    | Explain the reason for the brake-temperature indicator.  | X         | X   |            |      |     |    |                  |         |
| <b>021 04 03 03</b> |    | <b>Anti-skid</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the operating principle of anti-skid where excessive brake pressure applied is automatically reduced for optimum breaking performance.  | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Explain that the anti-skid computer compares wheel speed to aeroplane reference speed to provide the following:<br>— slip ratio for maximum braking performance;<br>— locked-wheel prevention (protection against deep skid on one wheel);<br>— touchdown protection (protection against brake-pressure application during touchdown);<br>— hydroplane protection. | X         | X   |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (03)                |    | Give examples of the impact of an anti-skid system on performance, and explain the implications of anti-skid system failure.  | X         | X   |            |      |     |    |                  |         |
| <b>021 04 03 04</b> |    | <b>Autobrake</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the operating principle of an autobrake system.  | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Explain why the anti-skid system must be available when using autobrakes.   | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Explain the difference between the three modes of operation of an autobrake system:<br>— OFF (system off or reset);<br>— Armed (the system is ready to operate under certain conditions);<br>— Activated/Deactivated (application of pressure on brakes). | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Describe how an autobrake system setting will either apply maximum braking (RTO or MAX) or result in a given rate of deceleration, where the amount of braking applied may be affected by:<br>— the use of reverse thrust;<br>— slippery runway.          | X         | X   |            |      |     |    |                  |         |
| <b>021 04 04 00</b> |    | <b>Wheels, rims and tyres</b>   |           |     |            |      |     |    |                  |         |
| <b>021 04 04 01</b> |    | <b>Types, structural components and materials, operational limitations, thermal plugs</b>   |           |     |            |      |     |    |                  |         |
| (01)                | X  | Describe the different types of tyres such as:<br>— tubeless;<br>— diagonal (cross ply);  | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | — radial (circumferential bias).   |           |     |            |      |     |    |                  |         |
| (02)                | X  | Define the following terms:<br>— ply rating;<br>— tyre tread;<br>— tyre creep;<br>— retread (cover).   | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Explain the function of thermal/fusible plugs.   | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Explain the implications of and how to identify tread separation and wear or damage with associated increased risk of tyre burst.                              | X         | X   |            |      |     |    |                  |         |
| (05)                |    | Explain why the ground speed of tyres is limited.  | X         | X   |            |      |     |    |                  |         |
| (06)                |    | Describe the following tyre checks a pilot will perform during the pre-flight inspection and identify probable causes:<br>— cuts and damages;<br>— flat spots. | X         | X   |            |      |     |    |                  |         |
| <b>021 04 05 00</b> |    | <b>Helicopter equipment</b>  |           |     |            |      |     |    |                  |         |
| <b>021 04 05 01</b> |    | <b>Flotation devices</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain flotation devices, how they are operated, and their limitations.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain why indicated airspeed (IAS) limitations before, during and after flotation-device deployment must be observed.  |           |     | X          | X    | X   |    |                  |         |
| <b>021 05 00 00</b> |    | <b>FLIGHT CONTROLS</b>   |           |     |            |      |     |    |                  |         |
| <b>021 05 01 00</b> |    | <b>Aeroplane: primary flight controls</b>  |           |     |            |      |     |    |                  |         |
| <b>021 05 01 01</b> |    | <b>Definition and control surfaces</b>   |           |     |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (01)                |    | Define a 'primary flight control'.  | X         | X   |            |      |     |    |                  |         |
| (02)                |    | List the following primary flight control surfaces:<br>— elevator;<br>— aileron, roll spoilers, flaperon;<br>— rudder.                              | X         | X   |            |      |     |    |                  |         |
| (03)                |    | List the various means of control surface actuation including:<br>— manual;<br>— fully powered (irreversible);<br>— partially powered (reversible). | X         | X   |            |      |     |    |                  |         |
| <b>021 05 01 02</b> |    | <b>Manual controls</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the basic principle of a fully manual control system.   | X         | X   |            |      |     |    |                  |         |
| <b>021 05 01 03</b> |    | <b>Fully powered controls (irreversible)</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the basic principle of a fully powered control system.  | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Explain the concept of irreversibility in a flight control system.  | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Explain the need for a 'feel system' in a fully powered control system.   | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Explain the operating principle of a stabiliser trim system in a fully powered control system.  | X         | X   |            |      |     |    |                  |         |
| (05)                |    | Explain the operating principle of rudder and aileron trim in a fully powered control system.   | X         | X   |            |      |     |    |                  |         |
| <b>021 05 01 04</b> |    | <b>Partially powered controls (reversible)</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the basic principle of a partially powered control system.  | X         | X   |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (02)                |    | Explain why a 'feel system' is not necessary in a partially powered control system.   | X         | X   |            |      |     |    |                  |         |
| <b>021 05 01 05</b> |    | <b>System components, design, operation, indications and warnings, degraded modes of operation, jamming</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | List and describe the function of the following components of a flight control system:<br>— actuators;<br>— control valves;<br>— cables;<br>— electrical wiring;<br>— control surface position sensors. | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Explain how redundancy is obtained in primary flight control systems of large transport aeroplanes.   | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Explain the danger of control jamming and the means of retaining sufficient control capability.   | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Explain the methods of locking the controls on the ground and describe 'gust or control lock' warnings.   | X         | X   |            |      |     |    |                  |         |
| (05)                |    | Explain the concept of a rudder deflection limitation (rudder limiter) system and the various means of implementation (rudder ratio changer, variable stops, blow-back).                                | X         | X   |            |      |     |    |                  |         |
| <b>021 05 02 00</b> |    | <b>Aeroplane: secondary flight controls</b>   |           |     |            |      |     |    |                  |         |
| <b>021 05 02 01</b> |    | <b>System components, design, operation, degraded modes of operation, indications and warnings</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Define a 'secondary flight control'.  | X         | X   |            |      |     |    |                  |         |
| (02)                |    | List the following secondary flight control surfaces:   | X         | X   |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | <ul style="list-style-type: none"> <li>— lift-augmentation devices (flaps and slats);</li> <li>— speed brakes;</li> <li>— flight and ground spoilers;</li> <li>— trimming devices such as trim tabs, trimmable horizontal stabiliser.</li> </ul> |           |     |            |      |     |    |                  |         |
| (03)                |    | Describe secondary flight control actuation methods and sources of actuating power.  | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Explain the function of a mechanical lock when using hydraulic motors driving a screw jack.  | X         | X   |            |      |     |    |                  |         |
| (05)                |    | Describe the requirement for limiting flight speeds for the various secondary flight control surfaces.   | X         | X   |            |      |     |    |                  |         |
| (06)                |    | For lift-augmentation devices, explain the load-limiting (relief) protection devices and the functioning of an auto-retraction system.   | X         | X   |            |      |     |    |                  |         |
| (07)                |    | Explain how a flap/slat asymmetry protection device functions, and describe the implications of a flap/slat asymmetry situation.   | X         | X   |            |      |     |    |                  |         |
| (08)                |    | Describe the function of an auto-slat system.  | X         | X   |            |      |     |    |                  |         |
| (09)                |    | Explain the concept of control surface blow-back (aerodynamic forces overruling hydraulic forces).   | X         | X   |            |      |     |    |                  |         |
| <b>021 05 03 00</b> |    | <b>Helicopter: flight controls</b>   |           |     |            |      |     |    |                  |         |
| <b>021 05 03 01</b> |    | <b><i>Droop stops, control systems, trim systems, control stops</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the methods of locking the controls on the ground.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Describe main-rotor droop stops and how rotor flapping is restricted.  |           |     | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (03)               |    | Explain the principle of phase lag and advance angle.  |           |     | X          | X    | X   |    |                  |         |
| (04)               |    | Describe the following four axes of control operation, their operating principle and their associated cockpit controls:<br>— collective control;<br>— cyclic fore and aft (pitch axis);<br>— cyclic lateral (roll axis);<br>— yaw.   |           |     | X          | X    | X   |    |                  |         |
| (05)               |    | Describe the swash plate or azimuth star control system including the following:<br>— swash plate inputs;<br>— the function of the non-rotating swash plate;<br>— the function of the rotating swash plate;<br>— how swash plate tilt is achieved;<br>— swash plate pitch axis;<br>— swash plate roll axis;<br>— balancing of pitch/roll/collective inputs to the swash plate to equalise torsional loads on the blades. |           |     | X          | X    | X   |    |                  |         |
| (06)               |    | Describe the operation of the spider control system.   |           |     | X          | X    | X   |    |                  |         |
| (07)               |    | State the need for artificial feel in a hydraulically actuated flight control system.  |           |     | X          | X    | X   |    |                  |         |
| (08)               |    | Describe and explain the purpose of a trim system using the following terms:<br>— force-trim switch;<br>— force gradient;<br>— parallel trim actuator;<br>— cyclic 4-way trim switch;  |           |     | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | — interaction of trim system with an SAS/SCAS/ASS stability system;<br>— trim-motor indicators.  |           |     |            |      |     |    |                  |         |
| (09)                |    | Describe the different types of control runs.  |           |     | X          | X    | X   |    |                  |         |
| (10)                |    | Explain the use of control stops.  |           |     | X          | X    | X   |    |                  |         |
| <b>021 05 04 00</b> |    | <b>Aeroplane: fly-by-wire (FBW) control systems</b>  |           |     |            |      |     |    |                  |         |
| <b>021 05 04 01</b> |    | <b>Composition, explanation of operation, modes of operation</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain that an FBW flight control system is composed of the following:<br>— pilot's input command (control column/sidestick/rudder pedals);<br>— electrical signalling paths, including:<br>• pilot input to computer;<br>• computer to flight control surfaces;<br>• feedback from aircraft response to computer;<br>— flight control computers;<br>— actuators;<br>— flight control surfaces. | X         | X   |            |      |     |    |                  |         |
| (02)                |    | State the advantages and disadvantages of an FBW system in comparison with a conventional flight control system including:<br>— weight;<br>— pilot workload;<br>— flight-envelope protection.  | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Explain why an FBW system is always irreversible.  | X         | X   |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (04)                |    | Explain the different modes of operation:<br>— normal operation (e.g. normal law or normal mode);<br>— downgraded operation (e.g. alternate law or secondary mode);<br>— direct law.  | X         | X   |            |      |     |    |                  |         |
| (05)                |    | Describe the implications of mode degradation in relation to pilot workload and flight-envelope protection.   | X         | X   |            |      |     |    |                  |         |
| (06)                |    | Describe the implications for pilot workload during flight in normal operation (normal law/normal mode) during the following scenarios:<br>— an undetected system error activates the envelope protection;<br>— aircraft departs from intended flight path;<br>— aircraft does not respond as expected to control inputs. | X         | X   |            |      |     |    |                  |         |
| (07)                |    | For aircraft using sidestick for manual control, describe the implications of:<br>— dual control input made by the pilot;<br>— the control takeover facility available to the pilot.  | X         | X   |            |      |     |    |                  |         |
| (08)                |    | Describe solutions or actions to regain control.  | X         | X   |            |      |     |    |                  |         |
| <b>021 05 05 00</b> |    | <b>Helicopter: fly-by-wire (FBW) control systems</b>  |           |     |            |      |     |    |                  |         |
|                     |    | To be introduced at a later date.   |           |     | X          | X    | X   |    |                  |         |
| <b>021 06 00 00</b> |    | <b>PNEUMATICS — PRESSURISATION AND AIR-CONDITIONING SYSTEMS</b>   |           |     |            |      |     |    |                  |         |
| <b>021 06 01 00</b> |    | <b>Pneumatic/bleed-air supply</b>   |           |     |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| <b>021 06 01 01</b> |    | <b>Piston-engine air supply</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the following means of supplying air for the pneumatic systems for piston-engine aircraft:<br>— compressor;<br>— vacuum pump.   | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | State that an air supply is required for the following systems:<br>— instrumentation;<br>— heating;<br>— de-icing.   | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 06 01 02</b> |    | <b>Gas turbine engine: bleed-air supply</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State that the possible bleed-air sources for gas turbine engine aircraft are the following:<br>— engine;<br>— auxiliary power unit (APU);<br>— ground supply.   | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | State that for an aeroplane a bleed-air supply can be used for the following systems or components:<br>— ice protection;<br>— engine air starter;<br>— pressurisation of a hydraulic reservoir;<br>— air-driven hydraulic pumps;<br>— pressurisation and air conditioning. | X         | X   |            |      |     |    |                  |         |
| (03)                |    | State that for a helicopter a bleed-air supply can be used for the following systems or components:<br>— anti-icing;   |           |     | X          | X    | X   |    |                  |         |

|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | <ul style="list-style-type: none"> <li>— engine air starter;</li> <li>— pressurisation of a hydraulic reservoir.</li> </ul>   |           |     |            |      |     |    |                  |         |
| (04)                |    | State that the bleed-air supply system can comprise the following: <ul style="list-style-type: none"> <li>— pneumatic ducts;</li> <li>— isolation valve;</li> <li>— pressure-regulating valve;</li> <li>— engine bleed valve (HP/IP valves);</li> <li>— fan-air pre-cooler;</li> <li>— temperature and pressure sensors.</li> </ul> | X         | X   | ✗          | ✗    | ✗   |    |                  |         |
| (05)                |    | Interpret a basic pneumatic system schematic to the level of detail as found in an FCOM.  | X         | X   | X          | X    | X   |    |                  |         |
| (06)                |    | Describe the cockpit indications for bleed-air systems.   | X         | X   | X          | X    | X   |    |                  |         |
| (07)                |    | Explain how the bleed-air supply system is controlled and monitored.  | X         | X   | X          | X    | X   |    |                  |         |
| (08)                |    | State the following bleed-air malfunctions: <ul style="list-style-type: none"> <li>— over-temperature;</li> <li>— over-pressure;</li> <li>— low pressure;</li> <li>— overheat/duct leak;</li> </ul> and describe the potential consequences.  | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 06 02 00</b> |    | <b>Helicopter: air-conditioning systems</b>   |           |     |            |      |     |    |                  |         |
| <b>021 06 02 01</b> |    | <b><i>Types, system components, design, operation, degraded modes of operation, indications and warnings</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the purpose of an air-conditioning system.   |           |     | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (02)                |    | Explain how an air-conditioning system is controlled.   |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Describe the vapour cycle air-conditioning system including system components, design, operation, degraded modes of operation and system malfunction indications.   |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Identify the following components from a diagram of an air-conditioning system and describe the operating principle and function:<br>— air-cycle machine (pack, bootstrap system);<br>— pack-cooling fan;<br>— water separator;<br>— mixing valves;<br>— flow-control valves;<br>— isolation valves;<br>— recirculation fans;<br>— filters for recirculation;<br>— temperature sensors. |           |     | X          | X    | X   |    |                  |         |
| (05)                |    | List and describe the controls, indications and warnings related to an air-conditioning system.   |           |     | X          | X    | X   |    |                  |         |
| <b>021 06 03 00</b> |    | <b>Aeroplane: pressurisation and air-conditioning system</b>  |           |     |            |      |     |    |                  |         |
| <b>021 06 03 01</b> |    | <b>System components, design, operation, degraded modes of operation, indications and warnings</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain that a pressurisation and an air-conditioning system of an aeroplane controls:<br>— ventilation;<br>— temperature;<br>— pressure.   | X         | X   |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (02)               |    | Explain how humidity is controlled.   | X         | X   |            |      |     |    |                  |         |
| (03)               |    | Explain that the following components constitute a pressurisation system: <ul style="list-style-type: none"> <li>— pneumatic system as the power source;</li> <li>— outflow valve;</li> <li>— outflow valve actuator;</li> <li>— pressure controller;</li> <li>— excessive differential pressure-relief valve;</li> <li>— negative differential pressure-relief valve.</li> </ul>   | X         | X   |            |      |     |    |                  |         |
| (04)               |    | Explain that the following components constitute an air-conditioning system and describe their operating principles and function: <ul style="list-style-type: none"> <li>— air-cycle machine (pack, bootstrap system);</li> <li>— pack-cooling fan;</li> <li>— water separator;</li> <li>— mixing valves;</li> <li>— flow-control valves (outflow valve);</li> <li>— isolation valves;</li> <li>— ram-air valve;</li> <li>— recirculation fans;</li> <li>— filters for recirculated air;</li> <li>— temperature sensors.</li> </ul> <i>Remark: The bootstrap system is the only air-conditioning system considered for Part-FCL aeroplane examinations.</i> | X         | X   |            |      |     |    |                  |         |
| (05)               |    | Describe the use of hot trim air.   | X         | X   |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (06)                |    | Define the following terms:<br>— cabin altitude;<br>— cabin vertical speed;<br>— differential pressure;<br>— ground pressurisation.   | X         | X   |            |      |     |    |                  |         |
| (07)                |    | Describe the operating principle of a pressurisation system.  | X         | X   |            |      |     |    |                  |         |
| (08)                |    | Describe the emergency operation by manual setting of the outflow valve position.   | X         | X   |            |      |     |    |                  |         |
| (09)                |    | Describe the working principle of an electronic cabin-pressure controller.  | X         | X   |            |      |     |    |                  |         |
| (10)                |    | State how the maximum operating altitude is determined.   | X         | X   |            |      |     |    |                  |         |
| (11)                |    | Explain:<br>— why the maximum allowed value of cabin altitude is limited;<br>— a typical value of maximum differential pressure for large transport aeroplanes;<br>— the relation between cabin altitude, the maximum differential pressure and maximum aeroplane operating altitude. | X         | X   |            |      |     |    |                  |         |
| (12)                |    | Explain the typical warning on a transport category aircraft when cabin altitude exceeds 10 000 ft.   | X         | X   |            |      |     |    |                  |         |
| (13)                |    | List and interpret typical indications of the pressurisation system.  | X         | X   |            |      |     |    |                  |         |
| (14)                |    | Describe the main operational differences between a bleed-air-driven air-conditioning system and an electrically driven air-conditioning system as found on aircraft without engine bleed-air system.   | X         | X   |            |      |     |    |                  |         |
| <b>021 07 00 00</b> |    | <b>ANTI-ICING AND DE-ICING SYSTEMS</b>  |           |     |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| <b>021 07 01 00</b> |    | <b>Types, operation, indications</b>  |           |     |            |      |     |    |                  |         |
| <b>021 07 01 01</b> |    | <b><i>Types, design, operation, indications and warnings, operational limitations</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the concepts of anti-icing and de-icing.  | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Name the components of an aircraft which can be protected from ice accretion.   | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | State that on some aeroplanes the tail does not have an ice-protection system.  | X         | X   |            |      |     |    |                  |         |
| (04)                |    | State the different types of anti-icing/de-icing systems and describe their operating principle:<br>— hot air;<br>— electrical;<br>— fluid.   | X         | X   | X          | X    | X   |    |                  |         |
| (05)                |    | Describe the operating principle of the inflatable boot de-icing system.  | X         | X   |            |      |     |    |                  |         |
| <b>021 07 02 00</b> |    | <b>Ice warning systems</b>  |           |     |            |      |     |    |                  |         |
| <b>021 07 02 01</b> |    | <b><i>Types, operation, and indications</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the different operating principles of the following ice detectors:<br>— mechanical systems using air pressure;<br>— electromechanical systems using resonance frequencies. | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Describe the principle of operation of ice warning systems.   | X         | X   |            |      |     |    |                  |         |
| <b>021 07 03 00</b> |    | <b>Helicopter blade heating systems</b>   |           |     |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| <b>021 07 03 01</b> |    | <b>Limitations</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the limitations on blade heating and the fact that on some helicopters the heating does not heat all the main-rotor blades at the same time.  |           |     | X          | X    | X   |    |                  |         |

| <b>021 08 01 00</b> |    | <b>Piston engine</b>  |           |     |            |      |     |    |                  |         |
| <b>021 08 01 01</b> |    | <b>Fuel: types, characteristics, limitations</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State the types of fuel used by a piston engine and their associated limitations:<br>— diesel;<br>— JET-A1 (for high-compression engines);<br>— AVGAS;<br>— MOGAS.  | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | State the main characteristics of these fuels and give typical values regarding their flash points, freezing points and density.  | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 08 01 02</b> |    | <b>Design, operation, system components, indications</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State the tasks of the fuel system.   | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Name the following main components of a fuel system, and state their location and their function:<br>— lines;<br>— boost pump;<br>— pressure valves;<br>— filter, strainer;<br>— tanks (wing, tip, fuselage); | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | <ul style="list-style-type: none"> <li>— vent system;</li> <li>— sump;</li> <li>— drain;</li> <li>— fuel-quantity sensor;</li> <li>— fuel-temperature sensor.</li> </ul>   |           |     |            |      |     |    |                  |         |
| (03)                |    | Describe a gravity fuel feed system and a pressure feed fuel system.   | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | Describe the construction of the different types of fuel tanks and state their advantages and disadvantages: <ul style="list-style-type: none"> <li>— drum tank;</li> <li>— bladder tank;</li> <li>— integral tank.</li> </ul> | X         | X   | X          | X    | X   |    |                  |         |
| (05)                |    | Explain the function of cross-feed.  | X         | X   | X          | X    | X   |    |                  |         |
| (06)                |    | Define the term ‘unusable fuel’.   | X         | X   | X          | X    | X   |    |                  |         |
| (07)                |    | List the following parameters that are monitored for the fuel system: <ul style="list-style-type: none"> <li>— fuel quantity (low-level warning);</li> <li>— fuel temperature.</li> </ul>                                      | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 08 02 00</b> |    | <b>Turbine engine</b>  |           |     |            |      |     |    |                  |         |
| <b>021 08 02 01</b> |    | <b>Fuel: types, characteristics, limitations</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | State the types of fuel used by a gas turbine engine: <ul style="list-style-type: none"> <li>— JET-A;</li> <li>— JET-A1;</li> <li>— JET-B.</li> </ul>  | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (02)                |    | State the main characteristics of these fuels and give typical values regarding their flash points, freezing points and density.   | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | State the existence of additives for freezing.   | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 08 02 02</b> |    | <b>Design, operation, system components, indications</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the function of the fuel system: <ul style="list-style-type: none"> <li>— lines;</li> <li>— centrifugal boost pump;</li> <li>— pressure valves;</li> <li>— fuel shut-off valve;</li> <li>— filter, strainer;</li> <li>— tanks (wing, tip, fuselage, tail);</li> <li>— bafflers/baffles;</li> <li>— sump;</li> <li>— vent system;</li> <li>— drain;</li> <li>— fuel-quantity sensor;</li> <li>— fuel-temperature sensor;</li> <li>— refuelling/defueling system;</li> <li>— fuel dump/jettison system.</li> </ul> | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Name the main components of the fuel system and state their location and their function: <ul style="list-style-type: none"> <li>— trim fuel tanks;</li> <li>— bafflers;</li> <li>— refuelling/defueling system;</li> <li>— fuel dump/jettison system.</li> </ul>   | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | <i>Remark: For completion of list, please see 021 08 01 02 (02).</i>  |           |     |            |      |     |    |                  |         |
| (03)                |    | Interpret a typical fuel system schematic to the level of detail as found in an aircraft FCOM.  | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | Explain the limitations in the event of loss of booster pump fuel pressure.   | X         | X   | X          | X    | X   |    |                  |         |
| (05)                |    | Describe the use and purpose of drip sticks (manual magnetic indicators) (may also be known as dip stick or drop stick).  | X         | X   |            |      |     |    |                  |         |
| (06)                |    | Explain the considerations for fitting a fuel dump/jettison system and, if fitted, its function.  | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 09 00 00</b> |    | <b>ELECTRICS</b>  |           |     |            |      |     |    |                  |         |
|                     |    | <i>Remark: For any reference to the direction of current flow, the conventional current flow shall be used, i.e. from positive to negative.</i>                   |           |     |            |      |     |    |                  |         |
| <b>021 09 01 00</b> |    | <b>General, definitions, basic applications: circuit breakers, logic circuits</b>   |           |     |            |      |     |    |                  |         |
| <b>021 09 01 01</b> |    | <b>Static electricity</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain static electricity and describe the flying conditions where aircraft are most susceptible to build-up of static electricity.                              | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Describe a static discharger and explain the following:<br>— its purpose;<br>— typical locations;<br>— pilot's role of observing it during pre-flight inspection. | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Explain why an aircraft must first be grounded before refuelling/defueling.   | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | Explain the reason for electrical bonding.  | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| <b>021 09 01 02</b> |    | <b>Direct current (DC)</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the term ‘direct current’ (DC), and state that current can only flow in a closed circuit.   | X         | X   | X          | X    | X   |    |                  |         |
| (02)                | X  | Explain the basic principles of conductivity and give examples of conductors, semiconductors and insulators.  | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Describe the difference in use of the following mechanical switches and explain the difference in observing their state (e.g. ON/OFF), and why some switches are guarded:<br>— toggle switch;<br>— rocker switch;<br>— pushbutton switch;<br>— rotary switch.<br>Explain the difference in observing their state (e.g. ON/OFF) and why some switches are guarded. | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | Define voltage and current, and state their unit of measurement.  | X         | X   | X          | X    | X   |    |                  |         |
| (05)                | X  | Explain Ohm’s law in qualitative terms.   | X         | X   | X          | X    | X   |    |                  |         |
| (06)                | X  | Explain the effect on total resistance when resistors are connected in series or in parallel.   | X         | X   | X          | X    | X   |    |                  |         |
| (07)                | X  | State that resistances can have a positive or a negative temperature coefficient (PTC/NTC) and state their use.   | X         | X   | X          | X    | X   |    |                  |         |
| (08)                |    | Define electrical power and state the unit of measurement.  | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 09 01 03</b> |    | <b>Alternating current (AC)</b>   |           |     |            |      |     |    |                  |         |
| (01)                | X  | Explain the term ‘alternating current’ (AC), and compare its use to DC with regard to complexity.   | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (02)                |    | Define the term 'phase', and explain the basic principle of single-phase and three-phase AC.  | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | State that aircraft can use single-phase or three-phase AC.   | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | Define frequency and state the unit of measurement.   | X         | X   | X          | X    | X   |    |                  |         |
| (05)                | X  | Define 'phase shift' in qualitative terms.  | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 09 01 04</b> |    | <b>Intentionally left blank</b>   |           |     |            |      |     |    |                  |         |
| <b>021 09 01 05</b> |    | <b>Intentionally left blank</b>   |           |     |            |      |     |    |                  |         |
| <b>021 09 01 06</b> |    | <b>Electromagnetism</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | State that an electrical current produces a magnetic field.   | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Describe how the strength of the magnetic field changes with the magnitude of the current.  | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Explain the purpose and the working principle of a solenoid.  | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | Explain the purpose and the working principle of a relay.   | X         | X   | X          | X    | X   |    |                  |         |
| (05)                |    | Explain the principle of electromagnetic induction and how two electrical components or systems may affect each other through this principle. | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 09 01 07</b> |    | <b>Circuit protection</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the working principle of a fuse and a circuit breaker.  | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Explain how a fuse is rated.  | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Describe the principal difference between the following types of circuit breakers:  | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | — thermal circuit breaker sensing magnitude of current;<br>— magnetic circuit breaker sensing direction of current.  |           |     |            |      |     |    |                  |         |
| (04)                |    | Describe how circuit breakers may be used to reset aircraft systems/computers in the event of system failure (when part of a described procedure).   | X         | X   | X          | X    | X   |    |                  |         |
| (05)                |    | Explain a short circuit in practical terms using Ohm's Law, power and energy expressions highlighting the risk of fire due to power transfer and extreme energy dissipation.   | X         | X   | X          | X    | X   |    |                  |         |
| (06)                |    | Explain the risk of fire resulting from excessive heat in a circuit subjected to overcurrent.  | X         | X   | X          | X    | X   |    |                  |         |
| (07)                |    | Explain that overcurrent situations may be transient.  | X         | X   | X          | X    | X   |    |                  |         |
| (08)                |    | Explain the hazards of multiple resets of a circuit breaker or the use of incorrect fuse rating when replacing blown fuses.  | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 09 01 08</b> |    | <b>Semiconductors and logic circuits</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the effect of temperature on semiconductors with regard to function and longevity of the component.   | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Describe the following five basic logic functions, as used in aircraft FCOM documentation, and recognise their schematic symbols according to the ANSI/MIL standard:<br>— AND;<br>— OR;<br>— NOT;<br>— NOR;<br>— NAND. | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Interpret a typical logic circuit schematic to the level of detail as found in an aircraft FCOM.   | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| <b>021 09 02 00</b> |    | <b>Batteries</b>  |           |     |            |      |     |    |                  |         |
| <b>021 09 02 01</b> |    | <b><i>Types, characteristics and limitations</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State the function of an aircraft battery.  | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Name the types of rechargeable batteries used in aircraft:<br>— lead-acid;<br>— nickel-cadmium;<br>— lithium-ion;<br>— lithium-polymer.           | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Compare the different battery types with respect to:<br>— load behaviour;<br>— charging characteristics;<br>— risk of thermal runaway.            | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | Explain the term ‘cell voltage’ and describe how a battery may consist of several cells that combined provide the desirable voltage and capacity. | X         | X   | X          | X    | X   |    |                  |         |
| (05)                |    | Explain the difference between battery voltage and charging voltage.  | X         | X   | X          | X    | X   |    |                  |         |
| (06)                |    | Define the term ‘capacity of batteries’ and state the unit of measurement used.   | X         | X   | X          | X    | X   |    |                  |         |
| (07)                |    | State the effect of temperature on battery capacity and performance.  | X         | X   | X          | X    | X   |    |                  |         |
| (08)                |    | State that in the case of loss of all generated power (battery power only) the remaining electrical power is time-limited.                        | X         | X   | X          | X    | X   |    |                  |         |
| (09)                |    | Explain how lithium-type batteries pose a threat to aircraft safety and what affects this risk:   | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | <ul style="list-style-type: none"> <li>— numbers of batteries on board an aircraft including those brought on board by passengers;</li> <li>— temperature, of both battery and environment;</li> <li>— physical condition of the battery;</li> <li>— battery charging.</li> </ul>  |           |     |            |      |     |    |                  |         |
| (10)                |    | Describe how to contain a battery thermal runaway highlighting the following: <ul style="list-style-type: none"> <li>— how one cell can affect the neighbouring cells;</li> <li>— challenges if it happens in an aircraft during flight.</li> </ul>  | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 09 03 00</b> |    | <b>Generation</b>  |           |     |            |      |     |    |                  |         |
|                     |    | <i>Remark: For standardisation purposes, the following standard expressions are used:</i> <ul style="list-style-type: none"> <li>— <i>DC generator: produces DC output;</i></li> <li>— <i>DC alternator: produces AC, rectified by integrated rectifying unit, the output is DC;</i></li> <li>— <i>DC alternator: producing a DC output by using a rectifier;</i></li> <li>— <i>AC generator: produces AC output;</i></li> <li>— <i>starter generator: integrated combination of a generator and a starter motor;</i></li> <li>— <i>permanent magnet alternator/ generator: self-exciting AC generator.</i></li> </ul> | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 09 03 01</b> |    | <b>DC generation</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the basic working principle of a simple DC generator or DC alternator.  | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Explain the principle of voltage control and why it is required.   | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (03)                |    | Explain the purpose of reverse current protection from the battery/busbar to the alternator.  | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | Describe the basic operating principle of a starter generator and state its purpose.  | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 09 03 02</b> |    | <b>AC generation</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the working principle of a brushless three-phase AC generator.   | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | State that the generator field current is used to control voltage.  | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | State the relationship between output frequency and the rpm of a three-phase AC generator.  | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | Explain the term ‘frequency wild generator’.  | X         | X   | X          | X    | X   |    |                  |         |
| (05)                |    | List the following different power sources that can be used for an aeroplane to drive an AC generator:<br>— engine;<br>— APU;<br>— RAT;<br>— hydraulic. | X         | X   |            |      |     |    |                  |         |
| (06)                |    | List the following different power sources that can be used for a helicopter to drive an AC generator:<br>— engine;<br>— APU;<br>— gearbox.             |           |     | X          | X    | X   |    |                  |         |
| <b>021 09 03 03</b> |    | <b>Constant speed drive (CSD) and integrated drive generator (IDG) systems</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the function of a CSD.   | X         | X   |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (02)                |    | Explain the parameters of a CSD that are monitored.  | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Describe the function of an IDG.   | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Explain the consequences of a mechanical disconnection during flight for a CSD and an IDG.   | X         | X   |            |      |     |    |                  |         |
| (05)                |    | Explain that a CSD/IDG has its own, independent oil system and how a leak from this may appear as an engine oil leak.  | X         | X   |            |      |     |    |                  |         |
| <b>021 09 03 04</b> |    | <b>Transformers, transformer rectifier units (TRUs), static inverters</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State the function of a transformer.   | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | State the function of a TRU and its purpose, including type of output.   | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | State the function of a static inverter and its purpose, including type of output.   | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 09 04 00</b> |    | <b>Distribution</b>  |           |     |            |      |     |    |                  |         |
| <b>021 09 04 01</b> |    | <b>General</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the function of a busbar.  | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Describe the function of the following buses:<br>— AC bus;<br>— DC bus;<br>— emergency AC or DC bus;<br>— essential AC or DC bus;<br>— battery bus;<br>— hot bus, ground servicing or maintenance bus. | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | State that the aircraft structure can be used as a part of the   | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | electrical circuit (common earth) and explain the implications for electrical bonding.  |           |     |            |      |     |    |                  |         |
| (04)                |    | Explain the function of external power.   | X         | X   | X          | X    | X   |    |                  |         |
| (05)                |    | State that a priority sequence exists between the different sources of electrical power on ground and in flight.  | X         | X   | X          | X    | X   |    |                  |         |
| (06)                |    | Explain the term 'load sharing'.  | X         | X   | X          | X    | X   |    |                  |         |
| (07)                |    | Explain the term 'load shedding'.   | X         | X   | X          | X    | X   |    |                  |         |
| (08)                |    | Describe typical systems that can be shed in the event of a supply failure, such as passenger entertainment system and galley power.                            | X         | X   | X          | X    | X   |    |                  |         |
| (09)                |    | Interpret a typical electrical system schematic to the level of detail as found in an aircraft FCOM.  | X         | X   | X          | X    | X   |    |                  |         |
| (10)                |    | Explain the difference between a supply (e.g. generator) failure and a bus failure, and the operating consequences of either.                                   | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 09 04 02</b> |    | <b>DC distribution</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe a simple DC electrical system of a single-engine aircraft.   | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Describe a DC electrical system of a multi-engine aircraft (CS-23/CS-27) including the distribution consequences of loss of generator(s) or bus failure.        | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Describe the DC part of an electrical system of a transport aircraft (CS-25/CS-29) including the distribution consequences of loss of DC supply or bus failure. | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | Give examples of DC consumers.  | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 09 04 03</b> |    | <b>AC distribution</b>  |           |     |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (01)                |    | Explain the difference in the principle of operation for a split AC electrical system and a parallel AC electrical system.  | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Describe the following distribution consequences:<br>— power transfer between different power supplies;<br>— power transfer in the event of a supply failure;<br>— loss of all normal AC supplies.  | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Give examples of AC consumers.  | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | Explain the conditions to be met for paralleling AC generators.   | X         | X   | X          | X    | X   |    |                  |         |
| (05)                |    | State that volt-ampere (VA) is the unit for total power consumed in an AC system.   | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 09 04 04</b> |    | <b><i>Electrical load management and monitoring systems: automatic generators and bus switching during normal and failure operation, indications and warnings</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Give examples of system control, monitoring and annunciators using the following terms:<br>— generator control unit (GCU) for monitoring generator output and providing network protection;<br>— exciter contactor/breaker/relay for control of generator exciter field;<br>— generator contactor/breaker/relay for connecting the generator to the network;<br>— bus-tie contactor/breaker/relay for connecting busbars together;<br>— generator switch on the flight deck for manual control of exciter contactor;<br>— IDG/CSD disconnect switch on the flight deck for mechanical | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | disconnection of the generator;<br>— bus-tie switch on the flight deck with AUTO and OFF positions only.  |           |     |            |      |     |    |                  |         |
| (02)                |    | Describe, for normal and degraded modes of operation, the following functions of an electrical load management system on ground and in flight using the terms in 021 09 04 04 (01):<br>— distribution;<br>— monitoring;<br>— protection in the event of incorrect voltage;<br>— protection in the event of incorrect frequency;<br>— protection in the event of a differential fault. | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Describe the requirement for monitoring the aircraft batteries.   | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | Explain the importance of monitoring the temperature of nickel-cadmium and lithium-type batteries.  | X         | X   | X          | X    | X   |    |                  |         |
| (05)                |    | Interpret various different ammeter indications of an ammeter which monitors the charge current of the battery.   | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 09 05 00</b> |    | <b>Electrical motors</b>  |           |     |            |      |     |    |                  |         |
| <b>021 09 05 01</b> |    | <b>General</b>  |           |     |            |      |     |    |                  |         |
| (01)                | X  | State that the purpose of an electrical motor is to convert electrical energy into mechanical energy.   | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | State that because of the similarity in design, a generator and an electrical motor may be combined into a starter generator.   | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Explain that the size of the engine determines how much energy is required for starting, and state the following:<br>— small turbine engines may be able to use the battery for a   |           |     |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | very limited number of start attempts;<br>— large turbine engines require one or more power sources, either external or on-board.                              |           |     |            |      |     |    |                  |         |
| <b>021 09 05 02</b> |    | <b>Operating principle</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe how the torque of an electrical motor is determined by the supplied voltage and current, and the resulting magnetic fields within the engine.         | X         | X   | X          | X    | X   |    |                  |         |
| (02)                | X  | State that electrical motors can be either AC or DC.   | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Explain the consequences of the following:<br>— rotor seizure;<br>— rotor runaway.   | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 09 05 03</b> |    | <b>Components</b>  |           |     |            |      |     |    |                  |         |
| (01)                | X  | Name the following components of an electrical motor:<br>— rotor (rotating part of an electrical motor);<br>— stator (stationary part of an electrical motor). | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 10 00 00</b> |    | <b>PISTON ENGINES</b>  |           |     |            |      |     |    |                  |         |
|                     |    | <i>Remark: This topic includes diesel and petrol engines.</i>  |           |     |            |      |     |    |                  |         |
| <b>021 10 01 00</b> |    | <b>General</b>   |           |     |            |      |     |    |                  |         |
| <b>021 10 01 01</b> |    | <b>Types of internal-combustion engines: basic principles, definitions</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Define the following terms and expressions:<br>— rpm;<br>— torque;<br>— manifold absolute pressure (MAP);  | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | <ul style="list-style-type: none"> <li>— power output;</li> <li>— specific fuel consumption;</li> <li>— compression ratio, clearance volume, swept (displaced) volume, total volume.</li> </ul>  |           |     |            |      |     |    |                  |         |
| <b>021 10 01 02</b> |    | <b>Engine: design, operation, components</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the basic operating principle of a piston engine: <ul style="list-style-type: none"> <li>— crankcase;</li> <li>— crankshaft;</li> <li>— connecting rod;</li> <li>— piston;</li> <li>— piston pin;</li> <li>— piston rings;</li> <li>— cylinder;</li> <li>— cylinder head;</li> <li>— valves;</li> <li>— valve springs;</li> <li>— push rod;</li> <li>— camshaft;</li> <li>— rocker arm;</li> <li>— camshaft gear;</li> <li>— bearings.</li> </ul> | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Name and identify the various types of engine design with regard to cylinder arrangement and their advantages/disadvantages: <ul style="list-style-type: none"> <li>— horizontally opposed;</li> <li>— in line;</li> <li>— radial;</li> </ul>  | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | — and working cycle (four stroke: petrol and diesel).   |           |     |            |      |     |    |                  |         |
| (03)                |    | Describe the differences between petrol and diesel engines with respect to:<br>— means of ignition;<br>— maximum compression ratio;<br>— regulating air or mixture supply to the cylinder;<br>— pollution from the exhaust. | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 10 02 00</b> |    | <b>Fuel</b>   |           |     |            |      |     |    |                  |         |
| <b>021 10 02 01</b> |    | <b>Types, grades, characteristics, limitations</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Name the type of fuel used for petrol engines including its colour (AVGAS);<br>— 100 (green);<br>— 100LL (blue).  | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Name the type of fuel normally used for aviation diesel engines (JET-A1).   | X         | X   | X          | X    | X   |    |                  |         |
| (03)                | X  | Define the term 'octane rating'.  | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | Define the term 'detonation' and describe the causes and effects of detonation for both petrol and diesel engines.  | X         | X   | X          | X    | X   |    |                  |         |
| (05)                |    | Define the term 'pre-ignition' and describe the causes and effects of pre-ignition for both petrol and diesel engines.  | X         | X   | X          | X    | X   |    |                  |         |
| (06)                |    | Identify the conditions and power settings that promote detonation for petrol engines.  | X         | X   | X          | X    | X   |    |                  |         |
| (07)                |    | Describe how detonation in petrol engines is recognised.  | X         | X   | X          | X    | X   |    |                  |         |
| (08)                |    | Describe the method and occasions for checking the fuel for water content.  | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (09)                |    | State the typical value of fuel density for aviation gasoline and diesel fuel.  | X         | X   | X          | X    | X   |    |                  |         |
| (10)                |    | Explain volatility, viscosity and vapour locking for petrol and diesel fuels.   | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 10 03 00</b> |    | <b>Engine fuel pumps</b>  |           |     |            |      |     |    |                  |         |
| <b>021 10 03 01</b> |    | <b><i>Engine-driven fuel pump</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the need for a separate engine-driven fuel pump.  | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 10 04 00</b> |    | <b>Carburettor/injection system</b>   |           |     |            |      |     |    |                  |         |
| <b>021 10 04 01</b> |    | <b><i>Carburettor: design, operation, degraded modes of operation, indications and warnings</i></b>                                 |           |     |            |      |     |    |                  |         |
| (01)                |    | State the purpose of a carburettor.   | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Describe the operating principle of the simple float chamber carburettor.   | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Describe the methods of obtaining mixture control over the whole operating engine power setting range (compensation jet, diffuser). | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | Describe the methods of obtaining mixture control over the whole operating altitude range.  | X         | X   | X          | X    | X   |    |                  |         |
| (05)                |    | Explain the purpose and the operating principle of an accelerator pump.   | X         | X   | X          | X    | X   |    |                  |         |
| (06)                |    | Explain the purpose of power enrichment.  | X         | X   | X          | X    | X   |    |                  |         |
| (07)                |    | Describe the function of the carburettor heat system.   | X         | X   | X          | X    | X   |    |                  |         |
| (08)                |    | Explain the effect of carburettor heat on mixture ratio and power output.   | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (05)                |    | Describe the operating principle of a single-acting and a double-acting variable pitch propeller for single- and multi-engine aeroplanes.                | X         | X   |            |      |     |    |                  |         |
| (06)                |    | Describe the function and the basic operating principle of synchronising and synchro-phasing systems.  | X         | X   |            |      |     |    |                  |         |
| (07)                |    | Explain the purpose and the basic operating principle of an auto-feathering system and unfeathering.   | X         | X   |            |      |     |    |                  |         |
| <b>021 10 09 03</b> |    | <b>Reduction gearing: design</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | State the purpose of reduction gearing.  | X         | X   |            |      |     |    |                  |         |
| <b>021 10 09 04</b> |    | <b>Propeller handling: associated control levers, degraded modes of operation, indications and warnings</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the checks to be carried out on a constant-speed propeller system after engine start.   | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Describe the operation of a constant-speed propeller system during flight at different true airspeeds (TAS) and rpm including an overspeeding propeller. | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Describe the operating principle of a variable pitch propeller when feathering and unfeathering, including the operation of cockpit controls.            | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Describe the operating principle of a variable pitch propeller when reverse pitch is selected, including the operation of cockpit controls.              | X         | X   |            |      |     |    |                  |         |
| (05)                |    | Describe the operation of the propeller levers during different phases of flight.  | X         | X   |            |      |     |    |                  |         |
| <b>021 10 10 00</b> |    | <b>Performance and engine handling</b>   |           |     |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| <b>021 10 10 01</b> |    | <b>Performance</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the effect on power output of a petrol and diesel engine taking into consideration the following parameters:<br>— ambient pressure, exhaust back pressure;<br>— temperature;<br>— density altitude;<br>— humidity. | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Explain the term ‘normally aspirated engine’.   | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Power-augmentation devices: explain the requirement for power augmentation (turbocharging) of a piston engine.  | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | Describe the function and the principle of operation of the following main components of a turbocharger:<br>— turbine;<br>— compressor;<br>— waste gate;<br>— waste-gate actuator.  | X         | X   | X          | X    | X   |    |                  |         |
| (05)                |    | Explain the difference between an altitude-boosted turbocharger and a ground-boosted turbocharger.  | X         | X   | X          | X    | X   |    |                  |         |
| (06)                |    | Explain turbo lag.  | X         | X   | X          | X    | X   |    |                  |         |
| (07)                |    | Define the term ‘critical altitude’.  | X         | X   | X          | X    | X   |    |                  |         |
| (08)                |    | Explain the function of an intercooler.   | X         | X   | X          | X    | X   |    |                  |         |
| (09)                |    | Define the terms ‘full-throttle height’ and ‘rated altitude’.   | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 10 10 02</b> |    | <b>Engine handling</b>  |           |     |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (01)                |    | State the correct procedures for setting the engine controls when increasing or decreasing power.   | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Define the following terms:<br>— take-off power;<br>— maximum continuous power.   | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Describe the start problems associated with extreme cold weather.   | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | Describe the principal difference between a full-authority digital engine control (FADEC) system-controlled engine and traditional manual engine controls.                            | X         | X   | X          | X    | X   |    |                  |         |
| (05)                |    | Describe the engine controls available on the flight deck for a FADEC-controlled engine.  | X         | X   | X          | X    | X   |    |                  |         |
| (06)                |    | Explain that the FADEC has full authority of the control of all engine parameters ensuring efficient and correct running of the engine, including protection in the event of failure. | X         | X   | X          | X    | X   |    |                  |         |
| (07)                |    | Explain the need for FADEC redundancy with regard to power supply and data input and output.  | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 11 00 00</b> |    | <b>TURBINE ENGINES</b>  |           |     |            |      |     |    |                  |         |
| <b>021 11 01 00</b> |    | <b>Basic principles</b>   |           |     |            |      |     |    |                  |         |
| <b>021 11 01 01</b> |    | <b>Basic generation of thrust and the thrust formula</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe how thrust is produced by a basic gas turbine engine.  | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Describe the simple form of the thrust formula for a basic, straight jet engine and perform simple calculations (including pressure thrust).  | X         | X   |            |      |     |    |                  |         |
| (03)                |    | State that thrust can be considered to remain approximately   | X         | X   |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | constant over the whole aeroplane subsonic speed range.  |           |     |            |      |     |    |                  |         |
| <b>021 11 01 02</b> |    | <b>Design, types and components of turbine engines</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | List the main components of a basic gas turbine engine:<br>— inlet;<br>— compressor;<br>— combustion chamber;<br>— turbine;<br>— outlet.   | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Describe the variation of static pressure, temperature and axial velocity in a gas turbine engine under normal operating conditions and with the aid of a working cycle diagram. | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Describe the differences between absolute, circumferential (tangential) and axial velocity.  | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | List the different types of gas turbine engines:<br>— straight jet;<br>— turbofan;<br>— turboprop.   | X         | X   |            |      |     |    |                  |         |
| (05)                |    | State that a gas turbine engine can have one or more spools.   | X         | X   | X          | X    | X   |    |                  |         |
| (06)                |    | Describe how thrust is produced by turbojet and turbofan engines.  | X         | X   |            |      |     |    |                  |         |
| (07)                |    | Describe how power is produced by turboprop engines.   | X         | X   |            |      |     |    |                  |         |
| (08)                |    | Describe the term 'equivalent horsepower' (= thrust horsepower + shaft horsepower).  | X         | X   |            |      |     |    |                  |         |
| (09)                |    | Explain the principle of a free turbine or free-power turbine.   | X         | X   | X          | X    | X   |    |                  |         |
| (10)                |    | Define the term 'bypass ratio' and perform simple calculations to  | X         | X   |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | determine it.   |           |     |            |      |     |    |                  |         |
| (11)                |    | Define the terms 'propulsive power', 'propulsive efficiency', 'thermal efficiency' and 'total efficiency'.                      | X         | X   |            |      |     |    |                  |         |
| (12)                |    | Describe the influence of compressor-pressure ratio on thermal efficiency.  | X         | X   | X          | X    | X   |    |                  |         |
| (13)                |    | Explain the variations of propulsive efficiency with forward speed for turbojet, turbofan and turboprop engines.                | X         | X   |            |      |     |    |                  |         |
| (14)                |    | Define the term 'specific fuel consumption' for turbojets and turboprops.   | X         | X   |            |      |     |    |                  |         |
| <b>021 11 01 03</b> |    | <b><i>Coupled turbine engine: design, operation, components and materials</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Name the main assembly parts of a coupled turbine engine and explain its operation.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain the limitations of the materials used with regard to maximum turbine temperature, engine and drive train torque limits. |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Describe the possible effects on engine components when limits are exceeded.  |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Explain that when engine limits are exceeded, this event must be reported.  |           |     | X          | X    | X   |    |                  |         |
| <b>021 11 01 04</b> |    | <b><i>Free-turbine engine: design, components and materials</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the design methods to keep the engine's size small for installation in helicopters.                                    |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | List the main components of a free-turbine engine.  |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Describe how the power is developed by a turboshaft/free-turbine  |           |     | X          | X    | X   |    |                  |         |

|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | engine.  |           |     |            |      |     |    |                  |         |
| (04)                |    | Explain how the exhaust gas temperature is used to monitor turbine stress.   |           |     | X          | X    | X   |    |                  |         |
| <b>021 11 02 00</b> |    | <b>Main-engine components</b>  |           |     |            |      |     |    |                  |         |
| <b>021 11 02 01</b> |    | <b>Aeroplane: air intake</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | State the functions of the engine air inlet/air intake.  | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Describe the geometry of a subsonic (pitot-type) air inlet.  | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Explain the gas-parameter changes in a subsonic air inlet at different flight speeds.  | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Describe the reasons for, and the dangers of, the following operational problems concerning the engine air inlet:<br>— airflow separation;<br>— inlet icing;<br>— inlet damage;<br>— foreign object damage (FOD);<br>— heavy in-flight turbulence. | X         | X   |            |      |     |    |                  |         |
| <b>021 11 02 02</b> |    | <b>Compressor and diffuser</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | State the purpose of the compressor.   | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Describe the working principle of a centrifugal and an axial flow compressor.  | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Name the following main components of a single stage and describe their function for a centrifugal compressor:<br>— impeller;<br>— diffuser.   | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (04)               |    | Name the following main components of a single stage and describe their function for an axial compressor:<br>— rotor vanes;<br>— stator vanes.          | X         | X   | X          | X    | X   |    |                  |         |
| (05)               |    | Describe the gas-parameter changes in a compressor stage.   | X         | X   | X          | X    | X   |    |                  |         |
| (06)               |    | Define the term 'pressure ratio' and state a typical value for one stage of a centrifugal and an axial flow compressor and for the complete compressor. | X         | X   | X          | X    | X   |    |                  |         |
| (07)               |    | State the advantages and disadvantages of increasing the number of stages in a centrifugal compressor.  | X         | X   | X          | X    | X   |    |                  |         |
| (08)               |    | Explain the difference in sensitivity for FOD of a centrifugal compressor compared with an axial flow type.   | X         | X   | X          | X    | X   |    |                  |         |
| (09)               |    | Explain the convergent air annulus through an axial flow compressor.  | X         | X   | X          | X    | X   |    |                  |         |
| (10)               |    | Describe the reason for twisting the compressor blades.   | X         | X   | X          | X    | X   |    |                  |         |
| (11)               |    | State the tasks of inlet guide vanes (IGVs).  | X         | X   | X          | X    | X   |    |                  |         |
| (12)               |    | State the reason for the clicking noise whilst the compressor slowly rotates on the ground.   | X         | X   | X          | X    | X   |    |                  |         |
| (13)               |    | State the advantages of increasing the number of spools.  | X         | X   | X          | X    | X   |    |                  |         |
| (14)               |    | Explain the implications of tip losses and describe the design features to minimise the problem.  | X         | X   | X          | X    | X   |    |                  |         |
| (15)               |    | Explain the problems of blade bending and flapping and describe the design features to minimise the problem.  | X         | X   | X          | X    | X   |    |                  |         |
| (16)               |    | Explain the following terms:<br>— compressor stall;   | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | — engine surge.   |           |     |            |      |     |    |                  |         |
| (17)                |    | State the conditions that are possible causes of stall and surge.   | X         | X   | X          | X    | X   |    |                  |         |
| (18)                |    | Describe the indications of stall and surge.  | X         | X   | X          | X    | X   |    |                  |         |
| (19)                |    | Describe the design features used to minimise the occurrence of stall and surge.  | X         | X   | X          | X    | X   |    |                  |         |
| (20)                |    | Describe a compressor map (surge envelope) with rpm lines, stall limit, steady state line and acceleration line.                    | X         | X   | X          | X    | X   |    |                  |         |
| (21)                |    | Describe the function of the diffuser.  | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 11 02 03</b> |    | <b>Combustion chamber</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Define the purpose of the combustion chamber.   | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | List the requirements for combustion.   | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Describe the working principle of a combustion chamber.   | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | Explain the reason for reducing the airflow axial velocity at the combustion chamber inlet (snout).                                 | X         | X   | X          | X    | X   |    |                  |         |
| (05)                |    | State the function of the swirl vanes (swirler).  | X         | X   | X          | X    | X   |    |                  |         |
| (06)                |    | State the function of the drain valves.   | X         | X   | X          | X    | X   |    |                  |         |
| (07)                |    | Define the terms 'primary airflow' and 'secondary airflow', and explain their purpose.  | X         | X   | X          | X    | X   |    |                  |         |
| (08)                |    | Explain the following two mixture ratios:<br>— primary airflow to fuel;<br>— total airflow (within the combustion chamber) to fuel. | X         | X   | X          | X    | X   |    |                  |         |
| (09)                |    | Describe the gas-parameter changes in the combustion chamber.   | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (10)                |    | State a typical maximum value of the outlet temperature of the combustion chamber.   | X         | X   | X          | X    | X   |    |                  |         |
| (11)                |    | Describe the following types of combustion chambers and state the differences between them:<br>— can type;<br>— can-annular, cannular or turbo-annular;<br>— annular;<br>— reverse-flow annular. | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 11 02 04</b> |    | <b>Turbine</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the purpose of a turbine in different types of gas turbine engines.  | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Describe the principles of operation of impulse, reaction and impulse-reaction axial flow turbines.  | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Name the main components of a turbine stage and their function.  | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | Describe the working principle of a turbine.   | X         | X   | X          | X    | X   |    |                  |         |
| (05)                |    | Describe the gas-parameter changes in a turbine stage.   | X         | X   | X          | X    | X   |    |                  |         |
| (06)                |    | Describe the function and the working principle of active clearance control.   | X         | X   |            |      |     |    |                  |         |
| (07)                |    | Describe the implications of tip losses and the means to minimise them.  | X         | X   | X          | X    | X   |    |                  |         |
| (08)                |    | Explain why the available engine thrust is limited by the turbine inlet temperature.   | X         | X   |            |      |     |    |                  |         |
| (09)                |    | Explain the divergent gas-flow annulus through an axial-flow turbine.  | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (10)                |    | Explain the high mechanical thermal stress in the turbine blades and wheels/discs.   | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 11 02 05</b> |    | <b>Aeroplane: exhaust</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Name the following main components of the exhaust unit and their function:<br>— jet pipe;<br>— propelling nozzle;<br>— exhaust cone.   | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Describe the working principle of the exhaust unit.  | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Describe the gas-parameter changes in the exhaust unit.  | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Define the term ‘choked exhaust nozzle’ (not applicable to turboprops).  | X         |     |            |      |     |    |                  |         |
| (05)                |    | Explain how jet exhaust noise can be reduced.  | X         | X   |            |      |     |    |                  |         |
| <b>021 11 02 06</b> |    | <b>Helicopter: air intake</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Name and explain the main task of the engine air intake.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Describe the use of a convergent air-intake ducting on helicopters.  |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Describe the reasons for and the dangers of the following operational problems concerning engine air intake:<br>— airflow separations;<br>— intake icing;<br>— intake damage;<br>— FOD;<br>— heavy in-flight turbulence. |           |     | X          | X    | X   |    |                  |         |

|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (04)                |    | Describe the conditions and circumstances during ground operations when FOD is most likely to occur.   |           |     | X          | X    | X   |    |                  |         |
| (05)                |    | Describe and explain the principles of air intake filter systems that can be fitted to some helicopters for operations in icing and sand conditions.   |           |     | X          | X    | X   |    |                  |         |
| (06)                |    | Describe the function of the heated pads on some helicopter air intakes.   |           |     | X          | X    | X   |    |                  |         |
| <b>021 11 02 07</b> |    | <b>Helicopter: exhaust</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the working principle of the exhaust unit.  |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Describe the gas-parameter changes in the exhaust unit.  |           |     | X          | X    | X   |    |                  |         |
| <b>021 11 03 00</b> |    | <b>Additional components and systems</b>   |           |     |            |      |     |    |                  |         |
| <b>021 11 03 01</b> |    | <b>Engine fuel system</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Name the main components of the engine fuel system and state their function:<br>— filters;<br>— low-pressure (LP) pump;<br>— high-pressure (HP) pump;<br>— fuel manifold;<br>— fuel nozzles;<br>— HP fuel cock;<br>— fuel control; or<br>— hydromechanical unit. | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Name the two types of engine-driven high-pressure pumps, such as:  | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | — gear-type;<br>— swash plate-type.   |           |     |            |      |     |    |                  |         |
| (03)                |    | State the tasks of the fuel control unit.   | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | List the possible input parameters to a fuel control unit to achieve a given thrust/power setting.  | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 11 03 02</b> |    | <b>Engine control system</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State the tasks of the engine control system.   | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | List the following different types of engine control systems:<br>— hydromechanical;<br>— hydromechanical with a limited authority electronic supervisor;<br>— single-channel FADEC with hydromechanical backup;<br>— dual-channel FADEC with no backup or any other combination.  | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Describe a FADEC as a full-authority dual-channel system including functions such as an electronic engine control unit, wiring, sensors, variable vanes, active clearance control, bleed configuration, electrical signalling of thrust lever angle (TLA) (see also AMC to CS-E-50), and an EGT protection function and engine overspeed. | X         |     | X          | X    |     |    |                  |         |
| (04)                |    | Explain how redundancy is achieved by using more than one channel in a FADEC system.  | X         |     | X          | X    |     |    |                  |         |
| (05)                |    | State the consequences of a FADEC single input data failure.  | X         |     | X          | X    |     |    |                  |         |
| (06)                |    | State that all input and output data is checked by both channels in a FADEC system.   | X         |     | X          | X    |     |    |                  |         |
| (07)                |    | State that a FADEC system uses its own sensors and that, in some  | X         |     | X          | X    |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | cases, also data from aircraft systems is used.  |           |     |            |      |     |    |                  |         |
| (08)                |    | State that a FADEC must have its own source of electrical power.   | X         |     | X          | X    |     |    |                  |         |
| <b>021 11 03 03</b> |    | <b>Engine lubrication</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State the tasks of an engine lubrication system.   | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Name the following main components of a lubrication system and state their function:<br>— oil tank and centrifugal breather;<br>— oil pumps (pressure and scavenge pumps);<br>— oil filters (including the bypass);<br>— oil sumps;<br>— chip detectors;<br>— coolers. | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Explain that each spool is fitted with at least one ball bearing and two or more roller bearings.  | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Explain the use of compressor air in oil-sealing systems (e.g. labyrinth seals).   | X         | X   |            |      |     |    |                  |         |
| <b>021 11 03 04</b> |    | <b>Engine auxiliary gearbox</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State the tasks of the auxiliary gearbox.  | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Describe how the gearbox is driven and lubricated.   | X         | X   |            |      |     |    |                  |         |
| <b>021 11 03 05</b> |    | <b>Engine ignition</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | State the task of the ignition system.   | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Name the following main components of the ignition system and state their function:  | X         | X   |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | — power sources;<br>— igniters.   |           |     |            |      |     |    |                  |         |
| (03)                |    | State why jet turbine engines are equipped with two electrically independent ignition systems.  | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Explain the different modes of operation of the ignition system.  | X         | X   |            |      |     |    |                  |         |
| <b>021 11 03 06</b> |    | <b>Engine starter</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Name the main components of the starting system and state their function.   | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Explain the principle of a turbine engine start.  | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Describe the following two types of starters:<br>— electric;<br>— pneumatic.  | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Describe a typical start sequence (on ground/in flight) for a turbofan.   | X         | X   |            |      |     |    |                  |         |
| (05)                |    | Define 'self-sustaining rpm'.   | X         | X   |            |      |     |    |                  |         |
| <b>021 11 03 07</b> |    | <b>Reverse thrust</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Name the following main components of a reverse-thrust system and state their function:<br>— reverse-thrust select lever;<br>— power source (pneumatic or hydraulic);<br>— actuators;<br>— doors;<br>— annunciations. | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Explain the principle of a reverse-thrust system.   | X         | X   |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (03)                |    | Identify the advantages and disadvantages of using reverse thrust.  | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Describe and explain the following different types of thrust-reverser systems:<br>— hot-stream reverser;<br>— clamshell or bucket-door system;<br>— cold-stream reverser (only turbofan engines);<br>— blocker doors;<br>— cascade vanes. | X         | X   |            |      |     |    |                  |         |
| (05)                |    | Explain the implications of reversing the cold stream (fan reverser) only on a high bypass ratio engine.  | X         | X   |            |      |     |    |                  |         |
| (06)                |    | Describe the protection features against inadvertent thrust-reverse deployment in flight as present on most transport aeroplanes.   | X         | X   |            |      |     |    |                  |         |
| (07)                |    | Describe the controls and indications provided for the thrust-reverser system.  | X         | X   |            |      |     |    |                  |         |
| <b>021 11 03 08</b> |    | <b>Helicopter specifics on design, operation and components for additional components and systems such as lubrication system, ignition circuit, starter, accessory gearbox</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State the task of the lubrication system.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | List and describe the common helicopter lubrication systems.  |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Name the following main components of a helicopter lubrication system:<br>— reservoir;<br>— pump assembly;<br>— external oil filter;  |           |     | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | <ul style="list-style-type: none"> <li>— magnetic chip detectors, electronic chip detectors;</li> <li>— thermostatic oil coolers;</li> <li>— breather.</li> </ul>  |           |     |            |      |     |    |                  |         |
| (04)                |    | Identify and name the components of a helicopter lubrication system from a diagram.  |           |     | X          | X    | X   |    |                  |         |
| (05)                |    | Identify the indications used to monitor a lubrication system including warning systems.   |           |     | X          | X    | X   |    |                  |         |
| (06)                |    | Explain the differences and appropriate use of straight oil and compound oil, and describe the oil numbering system for aviation use.  |           |     | X          | X    | X   |    |                  |         |
| (07)                |    | Explain and describe the ignition circuit for engine start and engine relight facility when the selection is set for both automatic and manual functions.  |           |     | X          | X    | X   |    |                  |         |
| (08)                |    | Explain and describe the starter motor and the sequence of events when starting, and that for most helicopters the starter becomes the generator after the starting sequence is over.                                  |           |     | X          | X    | X   |    |                  |         |
| (09)                |    | Explain and describe why the engine drives the accessory gearbox.  |           |     | X          | X    | X   |    |                  |         |
| <b>021 11 04 00</b> |    | <b>Engine operation and monitoring</b>   |           |     |            |      |     |    |                  |         |
| <b>021 11 04 01</b> |    | <b>General</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the following aeroplane engine ratings: <ul style="list-style-type: none"> <li>— take-off;</li> <li>— go-around;</li> <li>— maximum continuous thrust/power;</li> <li>— maximum climb thrust/power.</li> </ul> | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Explain spool-up time.   | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (03)               |    | Explain the reason for the difference between ground and approach flight idle values (rpm).  | X         | X   |            |      |     |    |                  |         |
| (04)               |    | State the parameters that can be used for setting and monitoring the thrust/power.   | X         | X   | X          | X    | X   |    |                  |         |
| (05)               |    | Describe the terms 'alpha range', 'beta range' and 'reverse thrust' as applied to a turboprop power lever.   | X         | X   |            |      |     |    |                  |         |
| (06)               |    | Explain the dangers of inadvertent beta-range selection in flight for a turboprop.   | X         | X   |            |      |     |    |                  |         |
| (07)               |    | Explain the purpose of engine trending.  | X         | X   |            |      |     |    |                  |         |
| (08)               |    | Explain how the exhaust gas temperature is used to monitor turbine stress.   | X         | X   | X          | X    | X   |    |                  |         |
| (09)               |    | Describe the effect of engine acceleration and deceleration on the EGT.  | X         | X   | X          | X    |     |    |                  |         |
| (10)               |    | Describe the possible effects on engine components when EGT limits are exceeded.   | X         | X   | X          | X    | X   |    |                  |         |
| (11)               |    | Explain why engine-limit exceedances must be reported.   | X         | X   | X          | X    | X   |    |                  |         |
| (12)               |    | Explain the limitations on the use of the thrust-reverser system at low forward speed.   | X         | X   |            |      | X   |    |                  |         |
| (13)               |    | Explain the term 'engine seizure'.   | X         | X   | X          | X    | X   |    |                  |         |
| (14)               |    | State the possible causes of engine seizure and explain their preventative measures.   | X         | X   | X          | X    | X   |    |                  |         |
| (15)               |    | Describe the potential consequences of a leak in the following two designs of fuel and oil heat exchanger:<br>— oil pressure higher than fuel pressure with oil leaking into the fuel system, potentially affecting the combustion and running | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | of the engine;<br>— fuel pressure higher than oil pressure with fuel leaking into the oil system, potentially increasing the risk of a fire due to fuel entering warm parts of the engine that should be free from fuel.                                     |           |     |            |      |     |    |                  |         |
| (16)                |    | Explain oil-filter clogging (blockage) and the implications for the lubrication system.  | X         | X   | X          | X    | X   |    |                  |         |
| (17)                |    | Give examples of monitoring instruments of an engine.  | X         | X   | X          | X    | X   |    |                  |         |
| (18)                |    | Describe how to identify and assess engine damage based on instrument indications.   | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 11 04 02</b> |    | <b>Starting malfunctions</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the indications and the possible causes of the following aeroplane starting malfunctions:<br>— false (dry or wet) start;<br>— tailpipe fire (torching);<br>— hot start;<br>— abortive (hung) start;<br>— no N1 rotation;<br>— no FADEC indications. | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Describe the indications and the possible causes of the following helicopter starting malfunctions:<br>— false (dry or wet) start;<br>— tailpipe fire (torching);<br>— hot start;<br>— abortive (hung) start;<br>— no N1 rotation;                           |           |     | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

|                     |    | — freewheel failure;<br>— no FADEC indications.  |           |     |            |      |     |    |                  |         |
| <b>021 11 04 03</b> |    | <b>Relight envelope</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the relight envelope.  | X         | X   |            |      |     |    |                  |         |
| <b>021 11 05 00</b> |    | <b>Performance aspects</b>   |           |     |            |      |     |    |                  |         |
| <b>021 11 05 01</b> |    | <b>Thrust, performance aspects, and limitations</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the variation of thrust and specific fuel consumption with altitude at constant TAS.  | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Describe the variation of thrust and specific fuel consumption with TAS at constant altitude.  | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Explain the term ‘flat-rated engine’ by describing the change of take-off thrust, turbine inlet temperature and engine rpm with outside air temperature (OAT). | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Define the term ‘engine pressure ratio’ (EPR).   | X         | X   |            |      |     |    |                  |         |
| (05)                |    | Explain the use of reduced (flexible) and derated thrust for take-off, and explain the advantages and disadvantages when compared with a full-rated take-off.  | X         | X   |            |      |     |    |                  |         |
| (06)                |    | Describe the effects of use of bleed air on rpm, EGT, thrust, and specific fuel consumption.   | X         | X   |            |      |     |    |                  |         |
| <b>021 11 05 02</b> |    | <b>Helicopter engine ratings, engine performance and limitations, engine handling: torque, performance aspects and limitations</b>                             |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe engine rating torque limits for take-off, transient and maximum continuous.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Describe turbine outlet temperature (TOT) limits for take-off.   |           |     | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (03)                |    | Explain why TOT is a limiting factor for helicopter performance.   |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Describe and explain the relationship between maximum torque available and density altitude, which leads to decreasing torque available with the increase of density altitude. |           |     | X          | X    | X   |    |                  |         |
| (05)                |    | Explain that hovering downwind, on some helicopters, will noticeably increase the engine TOT.  |           |     | X          | X    | X   |    |                  |         |
| (06)                |    | Explain the reason why the engine performance is less when aircraft accessories (i.e. anti-ice, heating, hoist, filters) are switched on.                                      |           |     | X          | X    | X   |    |                  |         |
| (07)                |    | Describe the effects of use of bleed air on engine parameters.   |           |     | X          | X    | X   |    |                  |         |
| (08)                |    | Explain that, on some helicopters, exceeding the TOT limit may cause the main rotor to droop (slow down).  |           |     | X          | X    | X   |    |                  |         |
| (09)                |    | Describe overtorquing and explain the consequences.  |           |     | X          | X    | X   |    |                  |         |
| <b>021 11 06 00</b> |    | <b>Auxiliary power unit (APU)</b>  |           |     |            |      |     |    |                  |         |
| <b>021 11 06 01</b> |    | <b>Design, operation, functions, operational limitations</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | State that an APU is a gas turbine engine and list its tasks.  | X         |     | X          | X    |     |    |                  |         |
| (02)                |    | State the difference between the two types of APU inlets.  | X         |     | X          | X    |     |    |                  |         |
| (03)                |    | Define 'maximum operating and maximum starting altitude'.  | X         |     | X          | X    |     |    |                  |         |
| (04)                |    | Name the typical APU control and monitoring instruments.   | X         |     | X          | X    |     |    |                  |         |
| (05)                |    | Describe the APU's automatic shutdown protection.  | X         |     | X          | X    |     |    |                  |         |
| <b>021 12 00 00</b> |    | <b>PROTECTION AND DETECTION SYSTEMS</b>  |           |     |            |      |     |    |                  |         |
| <b>021 12 01 00</b> |    | <b>Smoke detection</b>   |           |     |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| <b>021 12 01 01</b> |    | <b>Types, design, operation, indications and warnings</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the operating principle of the following types of smoke detection sensors:<br>— optical;<br>— ionising.               | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Give an example of warnings, indications and function tests.  | X         | X   | X          | X    | X   |    |                  |         |
| <b>021 12 02 00</b> |    | <b>Fire-protection systems</b>  |           |     |            |      |     |    |                  |         |
| <b>021 12 02 01</b> |    | <b>Fire extinguishing (engine and cargo compartments)</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the operating principle of a built-in fire-extinguishing system and describe its components.                          | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | State that two discharges must be provided for each engine (see CS 25.1195(c) Fire-extinguisher systems).                     | X         | X   |            |      |     |    |                  |         |
| <b>021 12 02 02</b> |    | <b>Fire detection</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the following principles of fire detection:<br>— resistance and capacitance;<br>— gas pressure.                       | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Explain fire-detection applications such as:<br>— bimetallic;<br>— continuous loop;<br>— gaseous loop (gas-filled detectors). | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Explain why generally double-loop systems are used.   | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | Give an example of warnings, indications and function tests of a fire-protection system.                                      | X         | X   | X          | X    | X   |    |                  |         |

| <b>021 12 03 00</b> |    | <b>Rain-protection system</b>  |           |     |            |      |     |    |                  |         |
| <b>021 12 03 01</b> |    | <b><i>Principle and method of operation</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the principle and method of operation of the following windshield rain-protection systems for an aeroplane:<br>— wipers;<br>— liquids (rain-repellent);<br>— coating.        | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Explain the principle and method of operation of wipers for a helicopter.  |           |     | X          | X    | X   |    |                  |         |
| <b>021 13 00 00</b> |    | <b>OXYGEN SYSTEMS</b>  |           |     |            |      |     |    |                  |         |
| <b>021 13 01 00</b> |    | <b>Cockpit, portable and chemical oxygen systems</b>   |           |     |            |      |     |    |                  |         |
| <b>021 13 01 01</b> |    | <b><i>Operating principles, actuation methods, comparison</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the basic operating principle of a cockpit oxygen system and describe the following different modes of operation:<br>— normal (diluter demand);<br>— 100 %;<br>— emergency. | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Describe the operating principle and the purposes of the following two portable oxygen systems:<br>— smoke hood;<br>— portable bottle.   | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Describe the following two oxygen systems that can be used to supply oxygen to passengers:<br>— fixed system (chemical oxygen generator or gaseous system);                          | X         | X   |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | — portable.   |           |     |            |      |     |    |                  |         |
| (04)                |    | Describe the actuation methods (automatic and manual) and the functioning of a passenger oxygen mask.                         | X         | X   |            |      |     |    |                  |         |
| (05)                |    | Compare chemical oxygen generators to gaseous systems with respect to:<br>— capacity;<br>— flow regulation.                   | X         | X   |            |      |     |    |                  |         |
| (06)                |    | State the dangers of grease or oil related to the use of oxygen systems.  | X         | X   |            |      |     |    |                  |         |
| <b>021 14 00 00</b> |    | <b>HELICOPTER: MISCELLANEOUS SYSTEMS</b>  |           |     |            |      |     |    |                  |         |
| <b>021 14 01 00</b> |    | <b>Variable rotor speed, active vibration suppression, night-vision goggles (NVG)</b>   |           |     |            |      |     |    |                  |         |
| <b>021 14 01 01</b> |    | <b>Variable rotor speed</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the system for ‘beeping’ the $N_R$ to its upper limit.  |           |     | X          | X    | X   |    |                  |         |
| <b>021 14 01 02</b> |    | <b>Active vibration suppression</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain and describe how the active vibration suppression system works through high-speed actuators and accelerometer inputs. |           |     | X          | X    | X   |    |                  |         |
| <b>021 14 01 03</b> |    | <b>NVG</b>  |           |     |            |      |     |    |                  |         |
|                     |    | To be introduced at a later date.   |           |     | X          | X    | X   |    |                  |         |
| <b>021 15 00 00</b> |    | <b>HELICOPTER: ROTOR HEADS</b>  |           |     |            |      |     |    |                  |         |
| <b>021 15 01 00</b> |    | <b>Main rotor</b>   |           |     |            |      |     |    |                  |         |
| <b>021 15 01 01</b> |    | <b>Types</b>  |           |     |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (01)                |    | Describe the following rotor-head systems:<br>— teetering (semi-articulated);<br>— articulated;<br>— hingeless (rigid);<br>— bearingless (semi-articulated). |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Describe in basic terms the following configuration of rotor systems and their advantages and disadvantages:<br>— tandem;<br>— coaxial;<br>— side by side.   |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Explain how flapping, dragging and feathering is achieved in each rotor-head system.   |           |     | X          | X    | X   |    |                  |         |
| <b>021 15 01 02</b> |    | <b>Structural components and materials, stresses, structural limitations</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Identify from a diagram the main structural components of the main types of rotor-head systems.  |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | List and describe the methods used to detect damage and cracks.  |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Explain and describe the structural limitations to respective rotor systems, including the dangers of negative G inputs to certain rotor-head systems.       |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Describe the various rotor-head lubrication methods.   |           |     | X          | X    | X   |    |                  |         |
| <b>021 15 01 03</b> |    | <b>Design and construction</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the material technology used in rotor-head design, including construction, using the following materials or mixture of materials:                   |           |     | X          | X    | X   |    |                  |         |

|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| <b>021 16 02 00</b> |    | <b>Rotor brake</b>  |           |     |            |      |     |    |                  |         |
| <b>021 16 02 01</b> |    | <b><i>Types, operational considerations</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the main function of the disc type of rotor brake.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Describe both hydraulic- and cable-operated rotor-brake systems.  |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Describe the different options for the location of the rotor brake.   |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | List the following operational considerations for the use of rotor brakes:<br>— rotor speed at engagement of rotor brake;<br>— risk of blade sailing in windy conditions;<br>— risk of rotor-brake overheating and possible fire when brake is applied above the maximum limit, particularly when spilled hydraulic fluid is present;<br>— avoid stopping blades over jet-pipe exhaust with engine running;<br>— cockpit annunciation of rotor-brake operation. |           |     | X          | X    | X   |    |                  |         |
| <b>021 16 03 00</b> |    | <b>Auxiliary systems</b>  |           |     |            |      |     |    |                  |         |
| <b>021 16 03 01</b> |    | <b><i>Powering the air-conditioning system</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain how power for the air-conditioning system is taken from the auxiliary gearbox.  |           |     | X          | X    | X   |    |                  |         |
| <b>021 16 04 00</b> |    | <b>Driveshaft and associated installation</b>   |           |     |            |      |     |    |                  |         |
| <b>021 16 04 01</b> |    | <b><i>Power, construction, materials, speed and torque</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe how power is transmitted from the engine to the main-rotor gearbox.  |           |     | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (02)                |    | Describe the material and construction of the driveshaft.  |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Explain the need for alignment between the engine and the main-rotor gearbox.  |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Identify how temporary misalignment occurs between driving and driven components.  |           |     | X          | X    | X   |    |                  |         |
| (05)                |    | Explain the relationship between driveshaft speed and torque.  |           |     | X          | X    | X   |    |                  |         |
| (06)                |    | Describe the methods with which power is delivered to the tail rotor.  |           |     | X          | X    | X   |    |                  |         |
| (07)                |    | Describe and identify the construction and materials of tail-rotor/Fenestron driveshafts.  |           |     | X          | X    | X   |    |                  |         |
| <b>021 16 05 00</b> |    | <b>Intermediate and tail gearbox</b>   |           |     |            |      |     |    |                  |         |
| <b>021 16 05 01</b> |    | <b>Lubrication, gearing</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain and describe the various arrangements when the drive changes direction and the need for an intermediate or tail gearbox. |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain the lubrication requirements for intermediate and tail-rotor gearboxes and methods of checking levels.                   |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Explain how on most helicopters the tail-rotor gearbox contains gearing, etc., for the tail-rotor pitch-change mechanism.        |           |     | X          | X    | X   |    |                  |         |
| <b>021 16 06 00</b> |    | <b>Clutches</b>  |           |     |            |      |     |    |                  |         |
| <b>021 16 06 01</b> |    | <b>Purpose, operation, components, serviceability</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the purpose of a clutch.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Describe and explain the operation of a:   |           |     | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | — centrifugal clutch;<br>— actuated clutch.   |           |     |            |      |     |    |                  |         |
| (03)                |    | List the typical components of the various clutches.  |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Identify the following methods by which clutch serviceability can be ascertained:<br>— brake-shoe dust;<br>— vibration;<br>— main-rotor run-down time;<br>— engine speed at time of main-rotor engagement;<br>— belt tensioning;<br>— start protection in a belt-drive clutch system. |           |     | X          | X    | X   |    |                  |         |
| <b>021 16 07 00</b> |    | <b>Freewheels</b>   |           |     |            |      |     |    |                  |         |
| <b>021 16 07 01</b> |    | <b><i>Purpose, operation, components, location</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the purpose of a freewheel.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Describe and explain the operation of a:<br>— cam- and roller-type freewheel;<br>— sprag-clutch-type freewheel.   |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | List the typical components of the various freewheels.  |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Identify the various locations of freewheels in power plant and transmission systems.   |           |     | X          | X    | X   |    |                  |         |
| (05)                |    | Explain the implications regarding the engagement and disengagement of the freewheel.   |           |     | X          | X    | X   |    |                  |         |
| <b>021 17 00 00</b> |    | <b>HELICOPTER: BLADES</b>   |           |     |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| <b>021 17 01 00</b> |    | <b>Main-rotor design and blade design</b>  |           |     |            |      |     |    |                  |         |
| <b>021 17 01 01</b> |    | <b>Design, construction</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the different types of blade construction and the need for torsional stiffness.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Describe the principles of heating systems/pads on some blades for anti-icing/de-icing.  |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Describe the fully articulated rotor with hinges and feathering hinges.  |           |     | X          | X    | X   |    |                  |         |
| <b>021 17 01 02</b> |    | <b>Structural components and materials</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | List the materials used in the construction of main-rotor blades.  |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | List the main structural components of a main-rotor blade and their function.  |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Describe the drag hinge of the fully articulated rotor and the lag flexure in the hingeless rotor.   |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Explain the necessity for drag dampers.  |           |     | X          | X    | X   |    |                  |         |
| <b>021 17 01 03</b> |    | <b>Forces and stresses</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe main-rotor blade-loading on the ground and in flight.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Describe where the most common stress areas are on rotor blades.   |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Show how the centrifugal forces depend on rotor rpm and blade mass and how they pull on the blade's attachment to the hub. Justify the upper limit of the rotor rpm. |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Assume a rigid attachment and show how thrust may cause huge   |           |     | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | oscillating bending moments which stress the attachment.  |           |     |            |      |     |    |                  |         |
| (05)                |    | Explain why flapping hinges do not transfer such moments. Show the small flapping hinge offset on fully articulated rotors and zero offset in the case of teetering rotors. |           |     | X          | X    | X   |    |                  |         |
| (06)                |    | Describe the working principle of the flexible element in the hingeless rotor and describe the equivalent flapping hinge offset compared to that of the articulated rotor.  |           |     | X          | X    | X   |    |                  |         |
| <b>021 17 01 04</b> |    | <b>Structural limitations</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the structural limitations in terms of bending and rotor rpm.   |           |     | X          | X    | X   |    |                  |         |
| <b>021 17 01 05</b> |    | <b>Adjustment</b>   |           |     |            |      |     |    |                  |         |
| (01)                | X  | Explain the use of trim tabs.   |           |     | X          | X    | X   |    |                  |         |
| <b>021 17 01 06</b> |    | <b>Tip shape</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the various blade-tip shapes used by different manufacturers and compare their advantages and disadvantages.   |           |     | X          | X    | X   |    |                  |         |
| <b>021 17 01 07</b> |    | <b>Origins of the vertical vibrations</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the lift (thrust) variations per revolution of a blade and the resulting vertical total rotor thrust (TRT) variation in the case of perfectly identical blades.     |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Show the resulting frequencies and amplitudes as a function of the number of blades.  |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Explain the thrust variation in the case of an out-of-track blade, causes, and frequencies (one-per-revolution).  |           |     | X          | X    | X   |    |                  |         |
| <b>021 17 01 08</b> |    | <b>Lateral vibrations</b>   |           |     |            |      |     |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (01)                |    | Explain blade imbalances, causes, and effects.   |           |     | X          | X    | X   |    |                  |         |
| <b>021 17 02 00</b> |    | <b>Tail-rotor design and blade design</b>  |           |     |            |      |     |    |                  |         |
| <b>021 17 02 01</b> |    | <b>Design, construction</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the most common design of tail-rotor blade construction, consisting of stainless steel shell reinforced by a honeycomb filler and stainless steel leading abrasive strip. |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain that ballast weights are located at the inboard trailing edge and tip of blades, and that the weights used are determined when the blades are manufactured.                |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Describe how, for some helicopters, anti-icing/de-icing systems are designed into the blade construction.  |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Describe the two-bladed rotor with a teetering hinge, and rotors with more than two blades.  |           |     | X          | X    | X   |    |                  |         |
| (05)                |    | Describe the dangers to ground personnel and to the rotor blades, and how to minimise these dangers.   |           |     | X          | X    | X   |    |                  |         |
| <b>021 17 02 02</b> |    | <b>Intentionally left blank</b>  |           |     |            |      |     |    |                  |         |
| <b>021 17 02 03</b> |    | <b>Stresses, vibrations and balancing</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the tail-rotor blade-loading on the ground and in flight.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain the sources of vibration of the tail rotor and the resulting high frequencies.   |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Explain balancing and tracking of the tail rotor.  |           |     | X          | X    | X   |    |                  |         |
| <b>021 17 02 04</b> |    | <b>Structural limitations</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the structural limitations of the tail-rotor blades.  |           |     | X          | X    | X   |    |                  |         |

## SUBJECT 021 — AIRCRAFT GENERAL KNOWLEDGE — AIRFRAME, SYSTEMS AND POWER PLANT

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (02)                |    | Describe the method of checking the strike indicators placed on the tip of some tail-rotor blades.       |           |     | X          | X    | X   |    |                  |         |
| <b>021 17 02 05</b> |    | <b>Adjustment</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the adjustment of yaw pedals in the cockpit to obtain full-control authority of the tail rotor. |           |     | X          | X    | X   |    |                  |         |
| <b>021 17 02 06</b> |    | <b>The Fenestron</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the technical layout of a Fenestron tail rotor.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain the advantages and disadvantages of a Fenestron tail rotor.                                      |           |     | X          | X    | X   |    |                  |         |
| <b>021 17 02 07</b> |    | <b>No tail rotor (NOTAR)</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the technical layout of a NOTAR design.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain the control concepts of a NOTAR.   |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Explain the advantages and disadvantages of a NOTAR design.  |           |     | X          | X    | X   |    |                  |         |

|                     |    | large aircraft.   |           |     |            |      |     |    |                  |         |
| (05)                |    | Explain the purpose of pitot/static system heating.   | X         | X   | X          | X    | X   | X  | X                |         |
| (06)                |    | Describe alternate static sources and their effects when used, particularly in unpressurised aircraft.  | X         | X   | X          | X    | X   | X  | X                |         |
| (07)                |    | Describe a modern pitot static system using solid-state sensors near the pitot probe or static port converting the air data to numerical data (electrical signals) before being sent to the air-data computer(s). | X         | X   | X          | X    | X   | X  |                  |         |
| <b>022 02 02 00</b> |    | <b>Temperature measurement</b>  |           |     |            |      |     |    |                  |         |
| <b>022 02 02 01</b> |    | <b>Definitions</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Define the following and explain the relationship between them:<br>— outside air temperature (OAT);<br>— total air temperature (TAT);<br>— static air temperature (SAT).  | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                |    | Explain the term 'ram rise' and convert TAT to SAT.   | X         |     |            |      |     | X  |                  |         |
| (03)                |    | Explain why TAT is often displayed and that TAT is the temperature input to the air-data computer.  | X         | X   | X          | X    | X   | X  | X                |         |
| <b>022 02 02 02</b> |    | <b>Design and operation</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Indicate typical locations for both direct-reading and remote-reading temperature probes, and describe the following errors:<br>— position error;<br>— instrument error.  | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| (02)                |    | Explain the purpose of temperature probe heating and interpret the effect of heating on sensed temperature unless automatically compensated for.                | X         | X   | X          | X    | X   | X  |                  |         |
| <b>022 02 03 00</b> |    | <b>Angle-of-attack (AoA) measurement</b>  |           |     |            |      |     |    |                  |         |
| <b>022 02 03 01</b> |    | <b>Sensor types, operating principles, ice protection, displays, incorrect indications</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the following two types of AoA sensors:<br>— null-seeking (slotted) probe;<br>— vane detector.   | X         | X   |            |      |     |    |                  |         |
| (02)                |    | For each type, explain the operating principles.  | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Explain how both types are protected against ice.   | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Give examples of systems that use the AoA as an input, such as:<br>— air-data computer;<br>— stall warning systems;<br>— flight-envelope protection systems.    | X         | X   |            |      |     |    |                  |         |
| (05)                |    | Give examples of and interpret different types of AoA displays:<br>— simple light arrays of green, amber and red lights;<br>— gauges showing a numerical scale. | X         | X   |            |      |     |    |                  |         |
| (06)                |    | Explain the implications for the pilot if the AoA indication becomes incorrect but still provides data, e.g. if the sensor is frozen in a fixed position.       | X         | X   |            |      |     |    |                  |         |
| (07)                |    | Explain how an incorrect AoA measurement can affect the   | X         | X   |            |      |     |    |                  |         |

| <b>022 04 04 01</b> |    | <b><i>Purpose, types, drift, alignment to compass heading</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the purpose of the directional gyroscope.  | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                |    | Identify the two types of gyro-driven direction indicators:<br>— direction indicator;<br>— horizontal situation indicator (HSI).   | X         | X   | X          | X    | X   | X  | X                |         |
| (03)                |    | Explain how the directional gyroscope will drift over time due to the following:<br>— rotation of the Earth;<br>— aircraft manoeuvring;<br>— aircraft movement over the Earth's surface/direction of travel. | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| (04)                |    | Describe the procedure for the pilot to align the directional gyroscope to the correct compass heading.   | X         | X   | X          | X    | X   | X  |                  |         |
| <b>022 04 05 00</b> |    | <b>Remote-reading compass systems</b>   |           |     |            |      |     |    |                  |         |
| <b>022 04 05 01</b> |    | <b><i>Operating principles, components, comparison with a direct-reading magnetic compass</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the principles of operation of a remote-reading compass system.  | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                |    | Using a block diagram, list and explain the function of the following components of a remote-reading compass system: <ul style="list-style-type: none"> <li>— flux detection unit;</li> <li>— gyro unit;</li> <li>— transducers, precession amplifiers, annunciator;</li> <li>— display unit (compass card, synchronising and set-heading knob, DG/compass/slave/free switch).</li> </ul>   | X         | X   | X          | X    | X   | X  | X                |         |
| (03)                |    | State the advantages and disadvantages of a remote-reading compass system compared to a direct-reading magnetic compass with regard to: <ul style="list-style-type: none"> <li>— design (power source, weight and volume);</li> <li>— deviation due to aircraft magnetism;</li> <li>— turning and acceleration errors;</li> <li>— attitude errors;</li> <li>— accuracy and stability of the information displayed;</li> <li>— availability of the information for several systems (compass card, RMI, automatic flight control system (AFCS)).</li> </ul> | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |   | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| 022 04 06 00       |    | <b>Solid-state systems — attitude and heading reference system (AHRS)</b>   | X         | X   | X          | X    | X   | X  |                  |         |
| 022 04 06 01       |    | <b>Components, indications</b>  |           |     |            |      |     |    |                  |         |
| (01)               |    | Explain that the AHRS is a replacement for traditional gyros using solid-state technology with no moving parts and is a single unit consisting of: <ul style="list-style-type: none"> <li>— solid-state accelerometers;</li> <li>— solid-state rate sensor gyroscopes;</li> <li>— solid-state magnetometers (measurement of the Earth's magnetic field).</li> </ul> | X         | X   | X          | X    | X   | X  | X                |         |
| (02)               |    | Explain that the AHRS senses rotation and acceleration for all three axes and senses the direction of the Earth's magnetic field where the indications are normally provided on electronic screens (electronic flight instrument system (EFIS)).  | X         | X   | X          | X    | X   | X  | X                |         |
| 022 05 00 00       |    | <b>INERTIAL NAVIGATION</b>  |           |     |            |      |     |    |                  |         |
| 022 05 01 00       |    | <b>Basic principles</b>   |           |     |            |      |     |    |                  |         |
| 022 05 01 01       |    | <b>Systems</b>  |           |     |            |      |     |    |                  |         |
| (01)               |    | State that inertial navigation/reference systems are the main source of attitude and one of the main sources of navigational data in commercial air transport aeroplanes.   | X         |     | X          | X    |     |    |                  |         |
| (02)               |    | State that inertial systems require no external input, except TAS, to determine aircraft attitude and navigational data.  | X         |     | X          | X    |     |    |                  |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| (03)               |    | State that earlier gyro mechanically stabilised platforms are (technically incorrectly but conventionally) referred to as inertial navigation systems (INSs) and more modern fixed (strap down) platforms are conventionally referred to as inertial reference systems (IRSs). INSs can be considered to be stand-alone, whereas IRSs are integrated with the FMS. | X         |     | X          | X    |     |    |                  |         |
| (04)               |    | Explain the basic principles of inertial navigation (including double integration of measured acceleration and the necessity for north–south, east–west and vertical components to be measured/extracted).   | X         |     | X          | X    |     |    |                  |         |
| (05)               |    | Explain the necessity of applying correction for transport precession, and Earth rate precession, coriolis and gravity.  | X         |     | X          | X    |     |    |                  |         |
| (06)               |    | State that in modern aircraft fitted with inertial reference system (IRS) and flight management system (FMS), the flight management computer (FMC) position is normally derived from a mathematical analysis of IRS, global positioning system (GPS), and distance measuring equipment (DME) data, VHF omnidirectional radio range (VOR) and LOC.                  | X         |     | X          | X    |     |    |                  |         |
| (07)               |    | List all navigational data that can be determined by a stand-alone inertial navigation system.   | X         |     | X          | X    |     |    |                  |         |
| (08)               |    | State that a strap-down system is fixed to the structure of the aircraft and normally consists of three laser ring gyros and three accelerometers.   | X         |     | X          | X    |     |    |                  |         |
| (09)               |    | State the differences between a laser ring gyro and a  | X         |     | X          | X    |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
|                     |    | conventional mechanical gyro.   |           |     |            |      |     |    |                  |         |
| <b>022 05 02 00</b> |    | <b>Alignment and operation</b>  |           |     |            |      |     |    |                  |         |
| <b>022 05 02 01</b> |    | <b><i>Alignment process, incorrect data entry, and control panels</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | State that during the alignment process, the inertial platform is levelled (INS) or the local vertical is determined (IRS), and true north/aircraft heading is established.   | X         |     | X          | X    |     |    |                  |         |
| (02)                |    | Explain that the aircraft must be stationary during alignment, the aircraft position is entered during the alignment phase, and that the alignment process takes around 10 to 20 minutes at mid latitudes (longer at high latitudes). | X         |     | X          | X    |     |    |                  |         |
| (03)                |    | State that in-flight realignment is not possible and loss of alignment leads to loss of navigational data although attitude information may still be available.   | X         |     | X          | X    |     |    |                  |         |
| (04)                |    | Explain that the inertial navigation system (INS) platform is maintained level and north-aligned after alignment is complete and the aircraft is in motion.   | X         |     | X          | X    |     |    |                  |         |
| (05)                |    | State that an incorrect entry of latitude may lead to a loss of alignment and is more critical than the incorrect entry of longitude.   | X         |     | X          | X    |     |    |                  |         |
| (06)                |    | State that the positional error of a stand-alone INS varies (a typical value can be quoted as 1–2 NM/h) and is dependent on the gyro drift rate, accelerometer bias, misalignment of the platform, and computational errors.          | X         |     | X          | X    |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| (07)                |    | Explain that, on a modern aircraft, there is likely to be an air-data inertial reference unit (ADIRU), which is an inertial reference unit (IRU) integrated with an air-data computer (ADC).  | X         |     | X          | X    |     |    |                  |         |
| (08)                |    | Identify examples of IRS control panels.  | X         |     | X          | X    |     |    |                  |         |
| (09)                |    | Explain the following selections on the IRU mode selector:<br>— NAV (normal operation);<br>— ATT (attitude only).   | X         |     | X          | X    |     |    |                  |         |
| (10)                |    | State that the majority of the IRS data can be accessed through the FMS control and display unit (CDU)/flight management and guidance system (FMGS) multifunctional control and display unit (MCDU).                                    | X         |     | X          | X    |     |    |                  |         |
| (11)                |    | Describe the procedure available to the pilot for assessing the performance of individual IRUs after a flight:<br>— reviewing the residual indicated ground speed when the aircraft has parked;<br>— reviewing the drift given as NM/h. | X         |     | X          | X    |     |    |                  |         |
| <b>022 06 00 00</b> |    | <b>AEROPLANE: AUTOMATIC FLIGHT CONTROL SYSTEMS</b>  |           |     |            |      |     |    |                  |         |
| <b>022 06 01 00</b> |    | <b>General</b>  |           |     |            |      |     |    |                  |         |
| <b>022 06 01 01</b> |    | <b>Definitions and control loops</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the following purposes of an automatic flight control system (AFCS):<br>— enhancement of flight controls;  | X         | X   |            |      |     | X  |                  |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
|                    |    | — reduction of pilot workload.   |           |     |            |      |     |    |                  |         |
| (02)               |    | Define and explain the following two functions of an AFCS:<br>— aircraft control: stabilise the aircraft around its centre of gravity (CG);<br>— aircraft guidance: guidance of the aircraft's flight path.  | X         | X   |            |      |     | X  |                  |         |
| (03)               |    | Describe the following two automatic control principles:<br>— closed loop, where a feedback from an action or state is compared to the desired action or state;<br>— open loop, where there is no feedback loop.   | X         | X   |            |      |     |    |                  |         |
| (04)               |    | List the following elements of a closed-loop control system and explain their basic function:<br>— input signal;<br>— error detector;<br>— signal processor providing a measured output signal according to set criteria or laws;<br>— control element such as an actuator;<br>— feedback signal to error detector for comparison with input signal. | X         | X   |            |      |     |    |                  |         |
| (05)               |    | Describe how a closed-loop system may enter a state of self-induced oscillation if the system overcompensates for deviations from the desired state.   | X         | X   |            |      |     |    |                  |         |
| (06)               |    | Explain how a state of self-induced oscillations may be detected and describe the effects of self-induced oscillations:<br>— aircraft controllability;   | X         | X   |            |      |     |    |                  |         |

|                     |    | <ul style="list-style-type: none"> <li>— aircraft safety;</li> <li>— timely manual intervention as a way of mitigating loss of control;</li> <li>— techniques that may be used to maintain positive control of the aircraft.</li> </ul>  |           |     |            |      |     |    |                  |         |
| <b>022 06 02 00</b> |    | <b>Autopilot system</b>  |           |     |            |      |     |    |                  |         |
| <b>022 06 02 01</b> |    | <b>Design and operation</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Define the three basic control channels.   | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Define the three different types of autopilots: <ul style="list-style-type: none"> <li>— single or 1 axis (roll);</li> <li>— 2 axes (pitch and roll);</li> <li>— 3 axes (pitch, roll and yaw);</li> </ul>  | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Describe the purpose of the following components of an autopilot system: <ul style="list-style-type: none"> <li>— flight control unit (FCU), mode control panel (MCP) or equivalent;</li> <li>— flight mode annunciator (FMA) (see Subject 022 06 04 00);</li> <li>— autopilot computer;</li> <li>— actuator.</li> </ul> | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Explain the following lateral modes: <ul style="list-style-type: none"> <li>— heading (HDG)/track (TRK);</li> <li>— VOR (VOR)/localiser (LOC);</li> <li>— lateral navigation/managed navigation (LNAV or NAV).</li> </ul>  | X         | X   |            |      |     |    |                  |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| (05)               |    | Describe the purpose of control laws for pitch and roll modes.   | X         | X   |            |      |     |    |                  |         |
| (06)               |    | Explain the following vertical modes:<br>— vertical speed (V/S);<br>— flight path angle (FPA);<br>— level change (LVL CHG)/open climb (OP CLB) or open descent (OP DES);<br>— speed reference system (SRS);<br>— altitude (ALT) hold;<br>— vertical navigation (VNAV)/managed climb (CLB) or descent (DES);<br>— glideslope (G/S). | X         | X   |            |      |     |    |                  |         |
| (07)               |    | Describe how the autopilot uses speed, aircraft configuration or flight phase as a measure for the magnitude of control inputs and how this may affect precision and stability.  | X         | X   |            |      |     |    |                  |         |
| (08)               |    | Explain the following mixed modes:<br>— take-off;<br>— go-around;<br>— approach (APP).   | X         | X   |            |      |     |    |                  |         |
| (09)               |    | Describe the two types of autopilot configurations and explain the implications to the pilot for either and when comparing the two principles:<br>— flight-deck controls move with the control surface when the autopilot is engaged;<br>— flight-deck controls remain static when the autopilot                                   | X         | X   |            |      |     |    |                  |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |   | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
|                    |    | is engaged.   |           |     |            |      |     |    |                  |         |
| (10)               |    | Describe the purpose of the following inputs and outputs for an autopilot system:<br>— attitude information;<br>— flight path/trajectory information;<br>— control surface position information;<br>— airspeed information;<br>— aircraft configuration information;<br>— FCU/MCP selections;<br>— FMAs.                                | X         | X   |            |      |     |    |                  |         |
| (11)               |    | Describe the purpose of the synchronisation function when engaging the autopilot and explain why the autopilot should be engaged when the aircraft is in trim.  | X         | X   |            |      |     |    |                  |         |
| (12)               |    | Define the control wheel steering (CWS) mode as manual manoeuvring of the aircraft through the autopilot computer and autopilot servos/actuators using the control column/control wheel.  | X         | X   |            |      |     |    |                  |         |
| (13)               |    | Describe the following elements of CWS:<br>— CWS as an autopilot mode;<br>— flight phases where CWS cannot be used;<br>— whether the pilot or the autopilot is controlling the flight path;<br>— the availability of flight path/performance protections;<br>— potential different feel and control response compared to manual flight. | X         | X   |            |      |     |    |                  |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |   | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| (14)               |    | Describe touch control steering (TCS) and highlight the differences when compared to CWS: <ul style="list-style-type: none"> <li>— autopilot remains engaged but autopilot servos/actuators are disconnected from the control surfaces;</li> <li>— manual control of the aircraft as long as TCS button is depressed;</li> <li>— autopilot servos/actuators reconnect when TCS button is released and the autopilot returns to previously engaged mode(s).</li> </ul> | X         | X   |            |      |     | X  |                  |         |
| (15)               |    | Explain that only one autopilot may be engaged at any time except for when APP is armed in order to facilitate a fail-operational autoland.   | X         | X   |            |      |     | X  |                  |         |
| (16)               |    | Explain the difference between an armed and an engaged mode: <ul style="list-style-type: none"> <li>— not all modes have an armed state available;</li> <li>— a mode will only become armed if certain criteria are met;</li> <li>— an armed mode will become engaged (replacing the previously engaged mode, if any) when certain criteria are met.</li> </ul>   | X         | X   |            |      |     | X  |                  |         |
| (17)               |    | Describe the sequence of events when a mode is engaged and the different phases: <ul style="list-style-type: none"> <li>— initial phase where attitude is changed to obtain a new trajectory in order to achieve the new parameter;</li> <li>— the trajectory will be based on rate of closure which</li> </ul>   | X         | X   |            |      |     | X  |                  |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
|                    |    | <p>is again based on the difference between the original parameter and the new parameter;</p> <ul style="list-style-type: none"> <li>— capture phase where the aircraft will follow a predefined rate of change of trajectory to achieve the new parameter without overshooting/undershooting;</li> <li>— tracking or hold phase where the aircraft will maintain the set parameter until a new change has been initiated.</li> </ul>  |           |     |            |      |     |    |                  |         |
| (18)               |    | <p>Explain automatic mode reversion and typical situations where it may occur:</p> <ul style="list-style-type: none"> <li>— no suitable data for the current mode such as flight plan discontinuity when in LNAV/managed NAV;</li> <li>— change of parameter during capture phase for original parameter such as change of altitude target during ALT ACQ/ALT*;</li> <li>— mismanagement of a mode resulting in engagement of the autopilot envelope protection, e.g. selecting excessive V/S resulting in a loss of speed control.</li> </ul> | X         | X   |            |      |     | X  |                  |         |
| (19)               |    | <p>Explain the dangers of mismanagement of the following modes:</p> <ul style="list-style-type: none"> <li>— use of V/S and lack of speed protection, i.e. excessive V/S or FPA may be selected with subsequent uncontrolled loss or gain of airspeed;</li> <li>— arming VOR/LOC or APP outside the protected area of the localiser or ILS.</li> </ul>   | X         | X   |            |      |     | X  |                  |         |
| (20)               |    | Describe how failure of other systems may influence the availability of the autopilot and how incorrect data   | X         | X   |            |      |     | X  |                  |         |

|                     |    | additional visual cues.   |           |     |            |      |     |    |                  |         |
| (06)                |    | Describe the consequences of not understanding what the FMAs imply or missing mode changes, and how it may lead to an undesirable aircraft state.   | X         | X   |            |      |     | X  |                  |         |
| <b>022 06 05 00</b> |    | <b>Autoland</b>   |           |     |            |      |     |    |                  |         |
| <b>022 06 05 01</b> |    | <b>Design and operation</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the purpose of an autoland system.  | X         |     |            |      |     | X  |                  |         |
| (02)                |    | Explain the significance of the following components required for an autoland:<br>— autopilot;<br>— autothrust;<br>— radio altimeter;<br>— ILS receivers.   | X         |     |            |      |     | X  |                  |         |
| (03)                |    | Explain the following terms (reference to CS-AWO 'All Weather Operations'):<br>— fail-passive automatic landing system;<br>— fail-operational automatic landing system;<br>— fail-operational hybrid landing system;<br>— alert height.                           | X         |     |            |      |     |    |                  |         |
| (04)                |    | Describe the autoland sequence including the following:<br>— FMAs regarding the landing capability of the aircraft;<br>— the significance of monitoring the FMAs to ensure the automatic arming/engagement of modes triggered by defined radio altitudes or other | X         |     |            |      |     |    |                  |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
|                    |    | thresholds;<br>— in the event of a go-around, that the aircraft performs the go-around manoeuvre both by reading the FMAs and supporting those readings by raw data;<br>— during the landing phase, that 'FLARE' mode engages at the appropriate radio altitude, including typical time frame and actions if 'FLARE' does not engage;<br>— after landing, that 'ROLL-OUT' mode engages and the significance of disconnecting the autopilot prior to vacating the runway. |           |     |            |      |     |    |                  |         |
| (05)               |    | Explain that there are operational limitations in order to legally perform an autoland beyond the technical capability of the aircraft.  | X         |     |            |      |     |    |                  |         |
| (06)               |    | Explain the purpose and significance of alert height, describe the indications and implications, and consider typical pilot actions for a failure situation:<br>— above the alert height;<br>— below the alert height.   | X         |     |            |      |     |    |                  |         |
| (07)               |    | Describe typical failures that, if occurring below the alert height, will trigger a warning:<br>— all autopilots disengage;<br>— loss of ILS signal or components thereof;<br>— excessive ILS deviations;<br>— radio-altimeter failure.  | X         |     |            |      |     |    |                  |         |
| (08)               |    | Describe how the failure of various systems, including systems not directly involved in the autoland process,  | X         |     |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
|                     |    | can influence the ability to perform an autoland or affect the minima down to which the approach may be conducted.   |           |     |            |      |     |    |                  |         |
| (09)                |    | Describe the fail-operational hybrid landing system as a primary fail-passive automatic landing system with a secondary independent guidance system such as a head-up display (HUD) to enable the pilot to complete a manual landing if the primary system fails.  | X         |     |            |      |     |    |                  |         |
| <b>022 07 00 00</b> |    | <b>HELICOPTER: AUTOMATIC FLIGHT CONTROL SYSTEMS</b>  |           |     |            |      |     |    |                  |         |
| <b>022 07 01 00</b> |    | <b>General principles</b>  |           |     |            |      |     |    |                  |         |
| <b>022 07 01 01</b> |    | <b>Stabilisation</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the similarities and differences between SAS and AFCS (the latter can actually fly the helicopter to perform certain functions selected by the pilot). Some AFCSs just have altitude and heading hold whilst others include a vertical speed or IAS hold mode, where a constant rate of climb/decent or IAS is maintained by the AFCS. |           |     | X          | X    | X   |    |                  |         |
| <b>022 07 01 02</b> |    | <b>Reduction of pilot workload</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Appreciate how effective the AFCS is in reducing pilot workload by improving basic aircraft control harmony and decreasing disturbances.   |           |     | X          | X    | X   |    |                  |         |
| <b>022 07 01 03</b> |    | <b>Enhancement of helicopter capability</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain how an AFCS improves helicopter flight safety during:<br>— search and rescue (SAR) because of increased  |           |     | X          | X    | X   |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
|                     |    | capabilities;<br>— flight by sole reference to instruments;<br>— underslung load operations;<br>— white-out conditions in snow-covered landscapes;<br>— an approach to land with lack of visual cues.  |           |     |            |      |     |    |                  |         |
| (02)                |    | Explain that the SAR modes of AFCS include the following functions:<br>— ability to autohover;<br>— facility for mark on target (MOT) approach to hover;<br>— automatically transition from cruise down to a predetermined point or over-flown point;<br>— ability for the rear crew to move the helicopter around in the hover;<br>— the ability to automatically transition from the hover back to cruise flight;<br>— the ability to fly various search patterns. |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Explain that earlier autohover systems use Doppler velocity sensors and modern systems use inertial sensors plus GPS, and normally include a two-dimensional hover-velocity indicator for the pilots.  |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Explain why some SAR helicopters have both radio-altimeter height hold and barometric altitude hold.   |           |     | X          | X    | X   |    |                  |         |
| <b>022 07 01 04</b> |    | <b>Failures</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the various redundancies and independent systems that are built into the AFCSS.  |           |     | X          | X    | X   |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| (02)                |    | Appreciate that the pilot can override the system in the event of a failure.  |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Explain a series actuator 'hard over' which equals aircraft attitude runaway.   |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Explain the consequences of a saturation of the series actuators.   |           |     | X          | X    | X   |    |                  |         |
| <b>022 07 02 00</b> |    | <b>Components: operation</b>  |           |     |            |      |     |    |                  |         |
| <b>022 07 02 01</b> |    | <b>Basic sensors</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the basic sensors in the system and their functions.  |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain that the number of sensors will be dependent on the number of coupled modes of the system.  |           |     | X          | X    | X   |    |                  |         |
| <b>022 07 02 02</b> |    | <b>Specific sensors</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the function of the microswitches and strain gauges in the system which sense pilot input to prevent excessive feedback forces from the system. |           |     | X          | X    | X   |    |                  |         |
| <b>022 07 02 03</b> |    | <b>Actuators</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the principles of operation of the series and parallel actuators, spring-box clutches and the autotrim system.                                  |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain the principle of operation of the electronic hydraulic actuators in the system.   |           |     | X          | X    | X   |    |                  |         |
| <b>022 07 02 04</b> |    | <b>Pilot–system interface: control panels, system indications, warnings</b>   |           |     |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| (01)                |    | Describe the typical layout of the AFCS control panel.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Describe the system indications and warnings.  |           |     | X          | X    | X   |    |                  |         |
| <b>022 07 02 05</b> |    | <b>Operation</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the functions of the redundant sensors' simplex and duplex channels (single/dual channel).   |           |     | X          | X    | X   |    |                  |         |
| <b>022 07 03 00</b> |    | <b>Stability augmentation system (SAS)</b>   |           |     |            |      |     |    |                  |         |
| <b>022 07 03 01</b> |    | <b>General principles and operation</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the general principles and operation of an SAS with regard to:<br>— rate damping;<br>— short-term attitude hold;<br>— effect on static stability;<br>— effect on dynamic stability;<br>— aerodynamic cross-coupling;<br>— effect on manoeuvrability;<br>— control response;<br>— engagement/disengagement;<br>— authority. |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain and describe the general working principles and primary use of an SAS by damping pitch, roll and yaw motions.  |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Describe a simple SAS with force trim system which uses magnetic clutch and springs to hold cyclic control in the position where it was last released.   |           |     | X          | X    | X   |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| (04)                |    | Explain the interaction of trim with SAS/stability and control augmentation system (SCAS).  |           |     | X          | X    | X   |    |                  |         |
| (05)                |    | Appreciate that the system can be overridden by the pilot and that individual channels can be deselected.   |           |     | X          | X    | X   |    |                  |         |
| (06)                |    | Describe the operational limits of the system.  |           |     | X          | X    | X   |    |                  |         |
| (07)                |    | Explain why the system should be turned off in severe turbulence or when extreme flight attitudes are reached.  |           |     | X          | X    | X   |    |                  |         |
| (08)                |    | Explain the safety design features built into some SASs to limit the authority of the actuators to 10–20 % of the full-control throw in order to allow the pilot to override if actuators demand an unsafe control input. |           |     | X          | X    | X   |    |                  |         |
| (09)                |    | Explain how cross-coupling produces an adverse effect on roll-to-yaw coupling when the helicopter is subjected to gusts.  |           |     | X          | X    | X   |    |                  |         |
| (10)                |    | Explain the collective-to-pitch coupling, side-slip-to-pitch coupling and inter-axis coupling.  |           |     | X          | X    | X   |    |                  |         |
| <b>022 07 04 00</b> |    | <b>Autopilot — automatic stability equipment</b>  |           |     |            |      |     |    |                  |         |
| <b>022 07 04 01</b> |    | <b>General principles</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the general autopilot principles with regard to:<br>— long-term attitude hold;<br>— fly-through;<br>— changing the reference (beep trim, trim release).   |           |     | X          | X    | X   |    |                  |         |
| <b>022 07 04 02</b> |    | <b>Basic modes (3/4 axes)</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the AFCS operation on cyclic axes (pitch/roll), yaw   |           |     | X          | X    | X   |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
|                     |    | axis, and on collective (fourth axis).  |           |     |            |      |     |    |                  |         |
| <b>022 07 04 03</b> |    | <b>Automatic guidance (upper modes of AFCS)</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the function of the attitude-hold system in an AFCS.  |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain the function of the heading-hold system in an AFCS.   |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Explain the function of the vertical-speed hold system in an AFCS.  |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Explain the function of the navigation-coupling system in an AFCS.  |           |     | X          | X    | X   |    |                  |         |
| (05)                |    | Explain the function of the VOR-/ILS-coupling system in an AFCS.  |           |     | X          | X    | X   |    |                  |         |
| (06)                |    | Explain the function of the hover-mode system in an AFCS (including Doppler and radio-altimeter systems).                     |           |     | X          | X    | X   |    |                  |         |
| (07)                |    | Explain the function of the SAR mode (automatic transition to hover and back to cruise) in an AFCS.                           |           |     | X          | X    | X   |    |                  |         |
| <b>022 07 04 04</b> |    | <b>Flight director: design and operation</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the purpose of a flight director system.  |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Describe the different types of display:<br>— pitch and roll crossbars;<br>— V-bar.   |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | State the difference between the flight director system and the autopilot system. Explain how each can be used independently. |           |     | X          | X    | X   |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter  |      |     | IR | CB-IR(A)<br>and EIR | Remarks |
|---------------------|----|---|-----------|-----|-------------|------|-----|----|---------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL<br>/IR | ATPL | CPL |    |                     |         |
| (04)                |    | List and describe the main components of the flight director system.  |           |     | X           | X    | X   |    |                     |         |
| (05)                |    | Give examples of different situations with the respective indications of the command bars.  |           |     | X           | X    | X   |    |                     |         |
| (06)                |    | Explain the architecture of the different flight directors fitted to helicopters and the importance to monitor other instruments as well as the flight director.                |           |     | X           | X    | X   |    |                     |         |
| (07)                |    | Explain how some helicopter types have the collective setting as a flight director command; however, the command does not provide protection against a transmission overtorque. |           |     | X           | X    | X   |    |                     |         |
| (08)                |    | Describe the collective setting and yaw depiction on flight director for some helicopters.  |           |     | X           | X    | X   |    |                     |         |
| <b>022 07 04 05</b> |    | <b>Automatic flight control panel (AFCP)</b>  |           |     |             |      |     |    |                     |         |
| (01)                |    | Explain the purpose and the importance of the AFCP.   |           |     | X           | X    | X   |    |                     |         |
| (02)                |    | State that the AFCP provides:<br>— AFCS basic and upper modes;<br>— flight director selection, SAS and AP engagement;<br>— failure and alert messages.                          |           |     | X           | X    | X   |    |                     |         |
| <b>022 08 00 00</b> |    | <b>TRIMS — YAW DAMPER — FLIGHT-ENVELOPE PROTECTION</b>  |           |     |             |      |     |    |                     |         |
| <b>022 08 01 00</b> |    | <b>Trim systems</b>   |           |     |             |      |     |    |                     |         |
| <b>022 08 01 01</b> |    | <b>Design and operation</b>   |           |     |             |      |     |    |                     |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| (01)                |    | Explain the purpose of the trim system and describe the layout with one trim system for each control axis, depending on the complexity of the aircraft.   | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Give examples of trim indicators and their function, and explain the significance of a 'green band/area' for the pitch trim.  | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Describe and explain an automatic pitch-trim system for a conventional aeroplane.   | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Describe and explain an automatic pitch-trim system for an FBW aeroplane and that it is also operating during manual flight; however, during certain phases it may be automatically disabled to alter the handling characteristics of the aircraft. | X         | X   |            |      |     |    |                  |         |
| (05)                |    | Describe the consequences of manual operation on the trim wheel when the automatic pitch-trim system is engaged.  | X         | X   |            |      |     |    |                  |         |
| (06)                |    | Describe and explain the engagement and disengagement conditions of the autopilot according to trim controls.   | X         | X   |            |      |     |    |                  |         |
| (07)                |    | Define 'Mach trim' and state that the Mach-trim system can be independent.  | X         | X   |            |      |     |    |                  |         |
| (08)                |    | Describe the implications for the pilot in the event of a runaway trim or significant out-of-trim state.  | X         | X   |            |      |     |    |                  |         |
| <b>022 08 02 00</b> |    | <b>Yaw damper</b>   |           |     |            |      |     |    |                  |         |
| <b>022 08 02 01</b> |    | <b>Design and operation</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the purpose of the yaw-damper system.   | X         | X   |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| (02)                |    | Explain the purpose of the Dutch-roll filter (filtering of the yaw input signal).   | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Explain the operation of a yaw-damper system and state the difference between a yaw-damper system and a 3-axis autopilot operation on the rudder channel.   | X         | X   |            |      |     |    |                  |         |
| <b>022 08 03 00</b> |    | <b>Flight-envelope protection (FEP)</b>   |           |     |            |      |     |    |                  |         |
| <b>022 08 03 01</b> |    | <b>Purpose, input parameters, functions</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the purpose of the FEP.   | X         | X   |            |      |     | X  |                  |         |
| (02)                |    | Explain typical input parameters to the FEP:<br>— AoA;<br>— aircraft configuration;<br>— airspeed information.  | X         | X   |            |      |     | X  |                  |         |
| (03)                |    | Explain the following functions of the FEP:<br>— stall protection;<br>— overspeed protection.   | X         | X   |            |      |     | X  |                  |         |
| (04)                |    | Explain how the stall-protection function and the overspeed-protection function apply to both mechanical/conventional and FBW control systems, but other functions (e.g. pitch or bank limitation) can only apply to FBW control systems. | X         | X   |            |      |     | X  |                  |         |
| <b>022 09 00 00</b> |    | <b>AUTOTHRUST — AUTOMATIC THRUST CONTROL SYSTEM</b>   |           |     |            |      |     |    |                  |         |
| <b>022 09 01 00</b> |    | <b>Autothrust system</b>  |           |     |            |      |     |    |                  |         |
| <b>022 09 01 01</b> |    | <b>Purpose, operation, overcompensation, speed control</b>  |           |     |            |      |     |    |                  |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| (01)               |    | Describe the purpose of the autothrust system and explain how the FMAs will be the only indication on active autothrust modes.   | X         |     |            |      |     |    |                  |         |
| (02)               |    | Explain the operation of an autothrust system with regard to the following modes:<br>— take-off/go-around (TOGA);<br>— climb or maximum continuous thrust (MCT), N1 or EPR targeted (THR CLB, THR MCT, N1, THR HOLD, EPR);<br>— speed (SPEED, MCP SPD);<br>— idle thrust (THR IDLE, RETARD/ARM);<br>— landing (RETARD, THR IDLE).                                  | X         |     |            |      |     |    |                  |         |
| (03)               |    | Describe the two main variants of autothrust systems:<br>— mode selections available on the FCU/MCP and thrust levers move with autothrust commands;<br>— mode selections made using the thrust levers which remain static during autothrust operation.  | X         |     |            |      |     |    |                  |         |
| (04)               |    | Explain how flight in turbulence/wind shear giving fluctuating airspeed indications may lead to the autothrust overcompensating in an oscillating manner and that manual thrust may be required to settle the airspeed. Airspeed indications/trend vectors may give an indication of appropriate thrust adjustments but any reaction should not be too aggressive. | X         |     |            |      |     |    |                  |         |
| (05)               |    | Explain the threats associated with the use of autothrust resulting in the pilot losing the sense of energy awareness (e.g. speed, thrust).  | X         |     |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| (06)                |    | Explain the relationship between autopilot pitch modes and autothrust modes, and how the autopilot and autothrust will interact upon selecting modes for one of the systems.  | X         |     |            |      |     |    |                  |         |
| (07)                |    | Explain the principles of speed control and how speed can be controlled:<br>— by varying the engine thrust;<br>— by varying the aircraft pitch.   | X         |     |            |      |     |    |                  |         |
| (08)                |    | Explain the potential implications on speed control when the autothrust controls speed and the autopilot pitch channel has a fixed pitch target for the following mode combinations:<br>— MCP SPD/SPEED and ALT HOLD/ALT;<br>— MCP SPD/SPEED and VSP (climb);<br>— MCP SPD/SPEED and VSP (descent). | X         |     |            |      |     |    |                  |         |
| (09)                |    | Explain the potential implications on speed control when the autothrust has a fixed thrust target and the autopilot pitch channel controls speed for the following mode combinations:<br>— N1/THR CLB and LVL CHG/OP CLB;<br>— ARM/THR IDLE and LVL CHG/OP DES.                                     | X         |     |            |      |     |    |                  |         |

|                     |    | <ul style="list-style-type: none"> <li>— failure of one CDU/MCDU;</li> <li>— failure of the cross-talk bus.</li> </ul>  |           |     |            |      |     |    |                  |         |
| (04)                |    | Describe how the FMS integrates with other systems and gathers data in order to provide outputs depending on its level of complexity.   | X         |     | X          | X    |     | X  |                  |         |
| (05)                |    | Explain how the FMS may provide the following functions: <ul style="list-style-type: none"> <li>— navigation;</li> <li>— lateral and vertical flight planning;</li> <li>— performance parameters.</li> </ul>  | X         | X   | X          | X    |     | X  |                  |         |
| <b>022 11 02 00</b> |    | <b>FMC databases</b>  |           |     |            |      |     |    |                  |         |
| <b>022 11 02 01</b> |    | <b>Navigation database</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the purpose of, and describe typical content of, the navigation database.   | X         |     | X          | X    |     | X  |                  |         |
| (02)                |    | Describe the 28-day aeronautical information regulation and control (AIRAC) update cycle of the navigation database and explain the reason for having two navigation databases (one active, one standby) and the implication this has to the pilot.                       | X         |     | X          | X    |     | X  |                  |         |
| (03)                |    | Explain the purpose of typical user-defined waypoints such as: <ul style="list-style-type: none"> <li>— latitude/longitude coordinates;</li> <li>— place/bearing/distance (PBD);</li> <li>— place/bearing place/bearing (PBX);</li> <li>— place/distance (PD).</li> </ul> | X         |     | X          | X    |     | X  |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| (04)                |    | Explain that the pilot cannot change or overwrite any of the data in the navigation database and that any user-defined waypoints, routes and inputted data will be erased when a different database is activated. | X         |     | X          | X    |     | X  |                  |         |
| (05)                |    | Explain the threats and implications to the pilot of changing the database by error either on the ground or while flying.   | X         |     | X          | X    |     | X  |                  |         |
| <b>022 11 02 02</b> |    | <b>Aircraft performance database</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the purpose of, and describe the typical content of, the aircraft performance database.   | X         |     | X          | X    |     | X  |                  |         |
| (02)                |    | Explain the importance of verifying that the aircraft performance database is based on the correct data, such as engine type and aircraft variant.  | X         |     | X          | X    |     | X  |                  |         |
| (03)                |    | Explain that the contents of the aircraft performance database cannot be modified by the pilot.   | X         |     | X          | X    |     | X  |                  |         |
| (04)                |    | Explain the purpose of performance factor and how it influences the calculations.   | X         |     | X          | X    |     | X  |                  |         |
| (05)                |    | Explain the purpose of cost index (CI) and how it influences the calculations.  | X         |     |            |      |     |    |                  |         |
| <b>022 11 03 00</b> |    | <b>Operations, limitations</b>  |           |     |            |      |     |    |                  |         |
| <b>022 11 03 01</b> |    | <b>Data, calculations, position inputs, raw data</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe typical data that may be provided by the FMS:<br>— lateral and vertical navigation guidance;<br>— present position;<br>— time predictions;   | X         |     | X          | X    |     | X  |                  |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
|                    |    | <ul style="list-style-type: none"> <li>— fuel predictions;</li> <li>— altitude/flight level predictions.</li> </ul>  |           |     |            |      |     |    |                  |         |
| (02)               |    | Explain how the FMS will use a combination of inputted/database and measured data in order to calculate projections and provide output data.   | X         |     | X          | X    |     | X  |                  |         |
| (03)               |    | Explain the issues and threats using inputted/database data and give examples of consequences of inputting data incorrectly/using incorrect data.  | X         |     | X          | X    |     | X  |                  |         |
| (04)               |    | Describe fuel consumption calculations during standard operations and explain typical data that will have an influence on the accuracy of the calculations.  | X         |     | X          | X    |     |    |                  |         |
| (05)               |    | Explain the implications on the accuracy of the calculations during flight in abnormal configurations (such as engine out, gear down, flaps extended, spoilers extended, etc.) if the FMS is unable to detect the failure. | X         |     | X          | X    |     |    |                  |         |
| (06)               |    | Describe and explain the purpose of an FMS having dedicated radio-navigation receivers that it will tune automatically.  | X         |     | X          | X    |     |    |                  |         |
| (07)               |    | Explain typical position inputs to an FMS: <ul style="list-style-type: none"> <li>— GPS;</li> <li>— IRS;</li> <li>— DME;</li> <li>— VOR;</li> <li>— LOC;</li> <li>— runway threshold (RWY THR).</li> </ul>                 | X         |     | X          | X    |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| (08)                |    | Explain how the FMS will create its own FMS position fix and that the FMS calculations will be based on the FMS position. Depending on the type of system, the FMS position may be calculated from: <ul style="list-style-type: none"> <li>— a single source of position data where the most accurate data available at a given time will be used;</li> <li>— multiple sources from which a position will be derived using the combined inputs.</li> </ul> | X         |     | X          | X    |     |    |                  |         |
| (09)                |    | Explain the implications of a reduction in available position inputs to the FMS, especially GPS in relation to the capability of performing RNP/PBN approaches.  | X         |     | X          | X    |     |    |                  |         |
| (10)                |    | Explain the difference between following the FMS data compared to following raw data from radio-navigation receivers and describe how there may be limitations for using FMS data as primary source to follow an instrument approach procedure (IAP) such as LOC, VOR or NDB.  | X         |     | X          | X    |     | X  |                  |         |
| <b>022 11 04 00</b> |    | <b>Human-machine interface (control display unit (CDU)/multipurpose control display unit (MCDU))</b>   |           |     |            |      |     |    |                  |         |
| <b>022 11 04 01</b> |    | <b>Purpose, scratchpad, data input, set-up process</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the purpose of a CDU/MCDU.  | X         |     | X          | X    |     | X  |                  |         |
| (02)                |    | Describe the typical layout of a CDU/MCDU and the general purpose of the following: <ul style="list-style-type: none"> <li>— screen;</li> <li>— line select keys;</li> <li>— menu select keys;</li> </ul>  | X         |     | X          | X    |     | X  |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
|                     |    | — alphanumerical keys.   |           |     |            |      |     |    |                  |         |
| (03)                |    | Explain the function of the 'scratchpad' part of the screen.   | X         |     | X          | X    |     | X  |                  |         |
| (04)                |    | Describe how input of some data is compulsory for the function of the FMS and other data is optional, and that different symbology is used to highlight this:<br>— rectangular boxes = compulsory information;<br>— dashed line = optional information.  | X         |     | X          | X    |     | X  |                  |         |
| (05)                |    | Describe a typical FMS pre-flight set-up process through the CDU/MCDU to cover the most basic information (with the aim to create awareness of required information as this is irrespective of aircraft type and FMS/FMGS make):<br>— ident page (who am I = aircraft type/variant, engine type/rating and appropriate navigation database);<br>— position initialisation (where am I = position for aligning the IRS and FMS position);<br>— route initialisation (where am I going to = place of departure/destination and alternate(s));<br>— route programming (how will I get there = SIDs, STARS, route (company or otherwise));<br>— performance initialisation (when will I arrive = weights, flap setting, FLEX/assumed temperature/derate, take-off speeds). | X         |     |            |      |     |    |                  |         |
| <b>022 12 00 00</b> |    | <b>ALERTING SYSTEMS, PROXIMITY SYSTEMS</b>   |           |     |            |      |     |    |                  |         |
| <b>022 12 01 00</b> |    | <b>General</b>   |           |     |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| <b>022 12 01 01</b> |    | <b>Alerting systems according to CS-25 and CS-29</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | State definitions, category, criteria and characteristics of alerting systems according to CS-25/AMC 25.1322 for aeroplanes and CS-29 for helicopters as appropriate.        | X         | X   | X          | X    | X   |    |                  |         |

| (01)                |    | Describe the function of an SWS and explain why the warning must be unique.  | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Describe the different types of SWSs.  | X         | X   |            |      |     |    |                  |         |
| (03)                |    | List the main components of an SWS.  | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Explain the difference between the stall warning speed and the actual stalling speed of the aeroplane.   | X         | X   |            |      |     |    |                  |         |
| <b>022 12 04 00</b> |    | <b>Stall protection</b>  |           |     |            |      |     |    |                  |         |
| <b>022 12 04 01</b> |    | <b>Function, types</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the function of a stall protection system.  | X         |     |            |      |     |    |                  |         |
| (02)                |    | Describe the different types of stall protection systems including the difference between mechanical and FBW controls.   | X         |     |            |      |     |    |                  |         |
| (03)                |    | Explain the difference between an SWS and a stall protection system.   | X         |     |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| <b>022 12 05 00</b> |    | <b>Overspeed warning</b>  |           |     |            |      |     |    |                  |         |
| <b>022 12 05 01</b> |    | <b><i>Purpose, aural warning, V<sub>MO</sub>/M<sub>MO</sub> pointer</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the purpose of an overspeed warning system (V <sub>MO</sub> /M <sub>MO</sub> pointer).  | X         | X   |            |      |     |    |                  |         |
| (02)                |    | State that for large aeroplanes, an aural warning must be associated to the overspeed warning if an electronic display is used (see AMC 25.11, paragraph 10.b(2), p. 2-GEN-22). | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Describe and give examples of V <sub>MO</sub> /M <sub>MO</sub> pointer: barber's/barber pole pointer, barber's/barber pole vertical scale.                                      | X         | X   |            |      |     |    |                  |         |
| <b>022 12 06 00</b> |    | <b>Take-off warning</b>   |           |     |            |      |     |    |                  |         |
| <b>022 12 06 01</b> |    | <b><i>Purpose</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the purpose of a take-off warning system and list the typical abnormal situations which generate a warning (see AMC 25.703, paragraphs 4 and 5).                        | X         |     |            |      |     |    |                  |         |
| <b>022 12 07 00</b> |    | <b>Altitude alert system</b>  |           |     |            |      |     |    |                  |         |
| <b>022 12 07 01</b> |    | <b><i>Function, displays, alerts</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the function of an altitude alert system.  | X         | X   | X          | X    | X   | X  |                  |         |
| (02)                |    | Describe different types of displays and possible alerts.   | X         | X   | X          | X    | X   | X  |                  |         |
| <b>022 12 08 00</b> |    | <b>Radio altimeter</b>  |           |     |            |      |     |    |                  |         |
| <b>022 12 08 01</b> |    | <b><i>Purpose, range, displays, incorrect indications</i></b>   |           |     |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| (01)                |    | Explain the purpose of a low-altitude radio altimeter.   | X         | X   | X          | X    | X   | X  |                  |         |
| (02)                |    | Describe the principle of the distance (height) measurement.   | X         | X   | X          | X    | X   | X  |                  |         |
| (03)                |    | Describe the different types of radio-altimeter displays.  | X         | X   | X          | X    | X   | X  |                  |         |
| (04)                |    | Describe how the radio altimeter provides input to other systems and how a radio-altimeter failure may impact on the functioning of these systems.   | X         | X   | X          | X    | X   | X  |                  |         |
| (05)                |    | State the range of a radio altimeter.  | X         | X   | X          | X    | X   | X  |                  |         |
| (06)                |    | Explain the potential implications of an incorrect radio-altimeter indication and how this in particular may affect the following systems:<br>— autothrust;<br>— ground-proximity warning systems (GPWSs). | X         | X   |            |      |     | X  |                  |         |
| <b>022 12 09 00</b> |    | <b>Ground-proximity warning systems (GPWSs)</b>  |           |     |            |      |     |    |                  |         |
| <b>022 12 09 01</b> |    | <b>GPWSs: design, operation, indications</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the purpose of GPWSs.  | X         |     | X          | X    |     |    |                  |         |
| (02)                |    | Explain inputs and outputs of a GPWS and describe its operating principle.   | X         |     | X          | X    |     |    |                  |         |
| (03)                |    | List and describe the different modes of operation of a GPWS.  | X         |     | X          | X    |     |    |                  |         |
| <b>022 12 09 02</b> |    | <b>Terrain-avoidance warning system (TAWS);<br/>other name: enhanced GPWS (EGPWS)</b>  |           |     |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| (01)                |    | Explain the purpose of a TAWS for aeroplanes and of a HTAWS for helicopters, and explain the difference from a GPWS.  | X         |     | X          | X    |     |    |                  |         |
| (02)                |    | Explain inputs and outputs of a TAWS/HTAWS and describe its working principle.  | X         |     | X          | X    |     |    |                  |         |
| (03)                |    | Give examples of terrain displays and list the different possible alerts.   | X         |     | X          | X    |     |    |                  |         |
| (04)                |    | Give examples of time response left to the pilot according to look-ahead distance, speed and aircraft performances.   | X         |     | X          | X    |     |    |                  |         |
| (05)                |    | Explain why the TAWS/HTAWS must be coupled to a precise-position sensor.  | X         |     | X          | X    |     |    |                  |         |
| (06)                |    | Explain the possibility of triggering spurious TAWS/HTAWS warnings as a result of mismanaging the flight path in the proximity to obstacles:<br>— high rate of descent;<br>— high airspeed;<br>— a combination of high rate of descent and high airspeed. | X         |     | X          | X    |     |    |                  |         |
| <b>022 12 09 03</b> |    | <b><i>Intentionally left blank</i></b>  |           |     |            |      |     |    |                  |         |
| <b>022 12 10 00</b> |    | <b>ACAS/TCAS</b>  | X         | X   | X          | X    | X   | X  |                  |         |
| <b>022 12 10 01</b> |    | <b><i>Principles and operations</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | State that ACAS II is an ICAO standard for anti-collision purposes.   | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |   | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| (02)               |    | Explain that ACAS II is an anti-collision system and does not guarantee any specific separation.  | X         | X   | X          | X    | X   | X  |                  |         |
| (03)               |    | Describe the purpose of an ACAS II system as an anti-collision system.  | X         | X   | X          | X    | X   | X  |                  |         |
| (04)               |    | Describe the following outputs from a TCAS:<br>— other intruders;<br>— proximate intruders;<br>— traffic advisory (TA);<br>— resolution advisory (RA).  | X         | X   | X          | X    | X   | X  |                  |         |
| (05)               |    | State that ACAS II will issue commands in the vertical plane only (climb, descent or maintain), and that the commands are complied with as a manual manoeuvre.  | X         | X   | X          | X    | X   | X  |                  |         |
| (06)               |    | Explain that an RA may or may not require any active control input and the implications of reacting instinctively without awareness of actual control inputs required to comply with the RA.                                | X         | X   | X          | X    | X   | X  |                  |         |
| (07)               |    | Explain that if two aircraft are fitted with ACAS II, the RA will be coordinated.   | X         | X   | X          | X    | X   | X  |                  |         |
| (08)               |    | State that ACAS II equipment can take into account several threats simultaneously.  | X         | X   | X          | X    | X   | X  |                  |         |
| (09)               |    | State that a detected aircraft without altitude-reporting can only generate a TA; describe typical type of traffic and how this can create distractions during flight in certain areas of significant air traffic activity. | X         | X   | X          | X    | X   | X  |                  |         |
| (10)               |    | Describe the interaction between the TCAS II system and the transponder, radio altimeter and the air-data   | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
|                    |    | computer:<br>— antenna used;<br>— computer and links with radio altimeter, air-data computer and mode-S transponder.   |           |     |            |      |     |    |                  |         |
| (11)               |    | Explain the principle of TCAS II interrogations.   | X         | X   | X          | X    | X   | X  |                  |         |
| (12)               |    | State the typical standard detection range for TCAS II:<br>— 35–40 NM horizontally;<br>— approximately 2 000 ft above and below (any setting);<br>— extension to approximately 10 000 ft above (ABV selected) or approximately 10 000 ft below (BLW selected).   | X         | X   | X          | X    | X   | X  |                  |         |
| (13)               |    | Explain the principle of ‘reduced surveillance’.   | X         | X   | X          | X    | X   | X  |                  |         |
| (14)               |    | Explain that in high-density traffic areas the range may automatically be decreased in order to enable detection of the threats in the proximity of the aircraft due to a limitation of the maximum number of possible intruders the system is able to process.  | X         | X   | X          | X    | X   | X  |                  |         |
| (15)               |    | Identify the equipment which an intruder must be fitted with in order to be detected by TCAS II.   | X         | X   | X          | X    | X   | X  |                  |         |
| (16)               |    | Explain in the anti-collision process:<br>— the criteria used to trigger an alarm (TA or RA) are the time to reach the closest point of approach (CPA) (called TAU) and the difference of altitude;<br>— an intruder will be classified as ‘proximate’ when being less than 6 NM and 1 200 ft from the TCAS- | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
|                    |    | equipped aircraft; <ul style="list-style-type: none"> <li>the time limit to CPA is different depending on aircraft altitude, is linked to a sensitivity level (SL), and state that the value to trigger an RA is from 15 to 35 seconds;</li> <li>in case of an RA, the intended vertical separation varies from 300 to 600 ft (700 ft above FL420), depending on the SL;</li> <li>below 1 000 ft above ground, no RA can be generated;</li> <li>below 1 450 ft (radio-altimeter value) 'increase descent' RA is inhibited;</li> <li>at high altitude, performances of the type of aircraft are taken into account to inhibit 'climb' and 'increase climb' RA.</li> </ul> |           |     |            |      |     |    |                  |         |
| (17)               |    | List and interpret the following information available from TCAS: <ul style="list-style-type: none"> <li>the different possible statuses of a detected aircraft: 'other', 'proximate', 'intruder';</li> <li>the appropriate graphic symbols and their position on the horizontal display;</li> <li>different aural warnings.</li> </ul>  | X         | X   | X          | X    | X   | X  |                  |         |
| (18)               |    | Explain the indications of a TA and an RA and how an RA will generate a red area on the VSI. Some variants will also include a green area. To manoeuvre the aircraft to comply with the RA, the pilot should 'avoid the red' or 'fly the green'.   | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| (19)                |    | Explain that the pilot must not interpret the horizontal track of an intruder upon the display.  | X         | X   | X          | X    | X   | X  |                  |         |
| <b>022 12 11 00</b> |    | <b>Rotor/engine overspeed alert system</b>   |           |     |            |      |     |    |                  |         |
| <b>022 12 11 01</b> |    | <b><i>Design, operation, displays, alarms</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the basic design principles, operation, displays and warning/alarm systems fitted to different helicopters.                           |           |     | X          | X    | X   |    |                  |         |
| <b>022 13 00 00</b> |    | <b>INTEGRATED INSTRUMENTS — ELECTRONIC DISPLAYS</b>  |           |     |            |      |     |    |                  |         |
| <b>022 13 01 00</b> |    | <b>Electronic display units</b>  |           |     |            |      |     |    |                  |         |
| <b>022 13 01 01</b> |    | <b><i>Design, limitations</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | List the different technologies used, e.g. CRT and LCD, and the associated limitations:<br>— cockpit temperature;<br>— glare;<br>— resolution. | X         | X   | X          | X    | X   | X  | X                |         |
| <b>022 13 02 00</b> |    | <b>Mechanical integrated instruments</b>   |           |     |            |      |     |    |                  |         |
| <b>022 13 02 01</b> |    | <b><i>Attitude and director indicator (ADI)/ horizontal situation indicator (HSI)</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe an ADI and an HSI.  | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                |    | List all the information that can be displayed on either instrument.   | X         | X   | X          | X    | X   | X  | X                |         |
| <b>022 13 03 00</b> |    | <b>Electronic flight instrument systems (EFISs)</b>  |           |     |            |      |     |    |                  |         |
| <b>022 13 03 01</b> |    | <b><i>Design, operation</i></b>  |           |     |            |      |     |    |                  |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| (01)               |    | List the following parts of an EFIS:<br>— control panel;<br>— display units;<br>— symbol generator;<br>— remote light sensor.  | X         | X   | X          | X    | X   | X  |                  |         |
| (02)               |    | Describe the typical layout of the EFIS display units and how there may be a facility to transfer the information from one display unit on to another if a display unit fails.   | X         | X   | X          | X    | X   | X  |                  |         |
| (03)               |    | Explain the need for standby instruments to supplement the EFIS in the event of all the display units failing and the challenge of using these standby instruments, namely their size and position on the flight deck.   | X         | X   | X          | X    | X   | X  |                  |         |
| (04)               |    | Explain the difference between a symbol generator failing and a display unit failing, and the implications if there are redundant symbol generators available.   | X         | X   | X          | X    | X   | X  |                  |         |
| (05)               |    | Describe the purpose of an EFIS control panel and typical selections that may be available:<br>— altimeter pressure setting;<br>— navigation display (ND) mode selector;<br>— ND range selector;<br>— ND data selector (waypoints, facilities, constraints, data, etc.);<br>— radio-navigation aids selector (VOR 1/2 or ADF 1/2);<br>— decision altitude (DA)/decision height (DH) selection. | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| <b>022 13 03 02</b> |    | <b>Primary flight display (PFD), electronic attitude director indicator (EADI)</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe that a PFD (or an EADI) presents a dynamic colour display of all the parameters necessary to control the aircraft, and that the main layout conforms with the 'basic T' principle: <ul style="list-style-type: none"> <li>— attitude information in the centre;</li> <li>— airspeed information on the left;</li> <li>— altitude information on the right;</li> <li>— heading/track indication lower centre;</li> <li>— flight mode annunciation;</li> <li>— basic T;</li> <li>— take-off and landing reference speeds;</li> <li>— minimum airspeed;</li> <li>— lower selectable airspeed;</li> <li>— Mach number.</li> </ul> | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                |    | Describe the typical design of the attitude information: <ul style="list-style-type: none"> <li>— artificial horizon with aircraft symbol;</li> <li>— superimposed flight director command bars.</li> </ul>  | X         | X   | X          | X    | X   | X  | X                |         |
| (03)                |    | Describe the typical design of the speed tape: <ul style="list-style-type: none"> <li>— rolling speed scale with numerical read-out of current speed;</li> <li>— limiting airspeeds according to configuration;</li> <li>— speed trend vector;</li> <li>— bug/indication for selected airspeed.</li> </ul>   | X         | X   | X          | X    | X   | X  | X                |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| (04)               |    | Explain the Mach number indications and how a selected Mach number is presented with the speed bug on a corresponding IAS on the speed tape with the Mach number shown as a numerical indication outside the speed tape.   | X         |     |            |      |     |    |                  |         |
| (05)               |    | Describe the typical design of the altitude information: <ul style="list-style-type: none"> <li>— rolling altitude scale with numerical read-out of current altitude;</li> <li>— altimeter pressure setting;</li> <li>— bug/indication for selected altitude;</li> <li>— means of highlighting the altitude if certain criteria are met.</li> </ul>  | X         | X   | X          | X    | X   | X  | X                |         |
| (06)               |    | Describe the typical design of the heading/track information: <ul style="list-style-type: none"> <li>— rolling compass scale/rose with numerical read-out of current heading/track;</li> <li>— bug/indication for selected heading/track.</li> </ul>   | X         | X   | X          | X    | X   | X  | X                |         |
| (07)               |    | Describe the typical design and location of the following information: <ul style="list-style-type: none"> <li>— flight mode annunciators (FMAs);</li> <li>— vertical speed indicator including TCAS RA command indications;</li> <li>— radio altitude;</li> <li>— ILS localiser/glideslope and RNP/PBN, GBAS or SBAS horizontal/vertical flight path deviation indicator;</li> <li>— decision altitude/height (DA/H).</li> </ul> | X         | X   | X          | X    | X   | X  | X                |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| <b>022 13 03 03</b> |    | <b>Navigation display (ND), electronic horizontal situation indicator (EHSI)</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe that an ND (or an EHSI) provides a mode-selectable colour flight ND.   | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                |    | List the following four modes typically available to be displayed on an ND unit:<br>— MAP (or ARC);<br>— VOR (or ROSE VOR);<br>— APP (or ROSE LS);<br>— PLAN.   | X         | X   | X          | X    | X   | X  |                  |         |
| (03)                |    | List and explain the following information that can be displayed with the MAP (or ARC) mode selected on an ND unit:<br>— aircraft symbol, compass scale and range markers;<br>— current heading and track (either one may be 'up' depending on selection), true or magnetic;<br>— selected heading and track;<br>— TAS/GS;<br>— wind direction and speed (W/V);<br>— raw data radio magnetic indicator (RMI) needles/pointers for VOR/automatic direction-finding equipment (ADF), if selected, including the frequency or ident of the selected navigation facility;<br>— route/flight plan data from the FMS;<br>— TO/next waypoint data from the FMS;<br>— data from the navigation database such as airports, | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |

|--------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
|                    |    | <ul style="list-style-type: none"> <li>— electronic centralised aircraft monitor (ECAM);</li> <li>— systems display (S/D).</li> </ul>  |           |     |            |      |     |    |                  |         |
| (04)               |    | Give the names of the following different display systems and describe their main functions: <ul style="list-style-type: none"> <li>— vehicle engine monitoring display (VEMD);</li> <li>— integrated instruments display system (IIDS).</li> </ul>  |           |     | X          | X    |     |    |                  |         |
| (05)               |    | State the purpose of a mission display unit.   |           |     | X          | X    |     |    |                  |         |
| (06)               |    | Describe the architecture of each system and give examples of display.   |           |     | X          | X    |     |    |                  |         |
| (07)               |    | Explain why awareness of the consequences of the actions commanded by the automatic checklist is required.   | X         |     | X          | X    |     |    |                  |         |
| (08)               |    | Explain the limited ability of the computer to assess a situation other than using the exceedance of certain thresholds to trigger the main and subsequent events and programmed actions.  | X         |     | X          | X    |     |    |                  |         |
| (09)               |    | Describe an appropriate procedure for following an on-screen checklist associated with a failure scenario including the following: <ul style="list-style-type: none"> <li>— confirm the failure with the other flight crew member prior to performing any of the actions;</li> <li>— seek confirmation prior to manipulating any guarded switches or thrust levers;</li> <li>— follow the checklist slowly and methodically;</li> <li>— assess the possible implications of making certain selections, such as opening the fuel cross-feed if</li> </ul> | X         |     | X          | X    |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
|                     |    | there is a fuel leak even though the electronic checklist may ask for the action.  |           |     |            |      |     |    |                  |         |
| <b>022 13 05 00</b> |    | <b>Engine first limit indicator</b>  |           |     |            |      |     |    |                  |         |
| <b>022 13 05 01</b> |    | <b><i>Design, operation, information on display</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the principles of design and operation, and compare the different indications and displays available.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Describe what information can be displayed on the screen, when the screen is in the limited composite mode.  |           |     | X          | X    | X   |    |                  |         |
| <b>022 13 06 00</b> |    | <b>Electronic flight bag (EFB)</b>   |           |     |            |      |     |    |                  |         |
| <b>022 13 06 01</b> |    | <b><i>Purpose, certification, malfunctions</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the purpose of the EFB and list typical equipment:<br>— computer laptop;<br>— tablet device;<br>— integrated avionics suite in the aircraft.   | X         | X   | X          | X    | X   | X  |                  |         |
| (02)                |    | Describe the ‘class’ hardware certification:<br>— portable: portable electronic device (PED) that can be used inside or outside the aircraft, is not part of the certified aircraft configuration and does not require tools to remove it from the flight-deck cradle, if one exists;<br>— installed: an electronic device that is considered an aircraft part covered by the aircraft airworthiness | X         |     | X          | X    |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
|                     |    | approval, thus is a minimum equipment list (MEL) item in the event of failure.   |           |     |            |      |     |    |                  |         |
| (03)                |    | Describe the 'type' software certification:<br>— type A: applications whose misuse or malfunctions have no adverse effect on flight safety;<br>— type B: applications for which evaluation of the hazards presented by misuse or malfunctions is required.     | X         |     | X          | X    |     |    |                  |         |
| (04)                |    | Explain implications of malfunctions with the EFB installation in a fully electronic flight-deck environment:<br>— mass and balance calculations;<br>— performance calculations;<br>— access to charts;<br>— access to manuals.                                | X         |     | X          | X    |     |    |                  |         |
| <b>022 13 07 00</b> |    | <b>Head-up display (HUD), synthetic vision system (SVS) and enhanced visual system (EVS)</b>   | X         |     | X          | X    |     |    |                  |         |
| <b>022 13 07 01</b> |    | <b>Components, benefits, modes of operation</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State the components of a typical HUD installation:<br>— HUD projector and stowable combiner;<br>— HUD controls such as declutter and dimmer;<br>— HUD computer.   | X         |     | X          | X    |     |    |                  |         |
| (02)                |    | Explain the reasons and benefits of having an HUD:<br>— increased situational awareness due to reduced need to look inside to view primary flight information;<br>— lower minima for both departure and landing;<br>— improved accuracy of flying thus reduced | X         |     | X          | X    |     |    |                  |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |   | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
|                    |    | susceptibility to enter a state of aircraft upset.  |           |     |            |      |     |    |                  |         |
| (03)               |    | Describe how the HUD replicates the information on the primary flight display (PFD) by showing the following data:<br>— altitude;<br>— speed, including speed trend;<br>— heading;<br>— flight path vector (track and vertical flight path);<br>— flight mode annunciator (FMA);<br>— CAS, TAWS and wind shear command annunciations. | X         |     | X          | X    |     |    |                  |         |
| (04)               |    | Describe the following modes of operation of an HUD:<br>— normal display mode that may automatically adapt the information based on the phase of flight;<br>— declutter function.   | X         |     | X          | X    |     |    |                  |         |
| (05)               |    | Describe the principle of SVS:<br>— an enhanced database used as reference to provide terrain and ground features to be shown on the PFD;<br>— limitations due to being a synthetic image not based on actual sensory information thus not lowering landing minima;<br>— implications if aircraft position accuracy becomes reduced.  | X         |     | X          | X    |     |    |                  |         |
| (06)               |    | Describe the principle of EVS:<br>— includes external sensors such as infrared cameras to generate a real-time image on the PFD or on the HUD;  | X         |     | X          | X    |     |    |                  |         |

MASS AND BALANCE — AEROPLANES/HELICOPTERS’**

**to**

**AMC1 FCL.310; FCL.515(b); FCL.615(b)**

**‘Theoretical knowledge examinations’**

**SUBJECT 031 — FLIGHT PERFORMANCE AND PLANNING: MASS AND BALANCE — AEROPLANES/HELICOPTERS**

*Note that the term ‘mass’ is used to describe a quantity of matter, and ‘weight’ when describing the force. However, the term ‘weight’ is normally used in aviation to colloquially describe mass. The professional pilot should always note the units to determine whether the term ‘weight’ is being used to describe a force (e.g. unit newton) or quantity of matter (e.g. unit kilogram).*

**(1) DEFINITIONS OF MASSES, LOADS AND INDEXES***Allowed take-off mass*

The mass taking into consideration all possible limitations for take-off including restrictions caused by regulated take-off mass and regulated landing mass.

*Area load or floor load*

The load (or mass) distributed over a defined area. Example units:

- SI:  $\text{N/m}^2$ ,  $\text{kg/m}^2$ ;
- Non-SI: psi,  $\text{lb/ft}^2$ .

*Basic empty mass (BEM)*

The mass of an aircraft plus standard items such as: unusable fuel; full operating fluids; fire extinguishers; emergency oxygen equipment. (The lowest mass that is used in FCL exams.)

*Dry operating mass (DOM)*

The total mass of an aircraft ready for a specific type of operation excluding all usable fuel and traffic load. This mass includes items such as:

- crew and crew baggage;
- catering and removable passenger service equipment (food, beverages, potable water, lavatory chemicals, etc.);
- special operational equipment (e.g. stretchers, rescue hoist, cargo sling).

*Dry operating index (DOI)*

The aircraft index at dry operating mass.

*Index*

An index is a moment reduced in a numerical value by an index formula.

*In-flight mass/gross mass*

The mass of an aircraft in flight at a specified time.

*Landing mass*

The mass of an aircraft at landing.

*Maximum structural in-flight mass with external loads (applicable to helicopters only)*

The maximum permissible total mass of the helicopter with external loads.

*Maximum structural landing mass*

The maximum permissible total mass of an aircraft at landing under normal circumstances.

*Maximum structural mass*

The maximum permissible total mass of an aircraft at any time. It will be given only if there is no difference between maximum structural taxi mass, maximum structural take-off mass and maximum structural landing mass.

*Maximum structural take-off mass*

The maximum permissible total mass of an aircraft at commencement of take-off.

*Maximum (structural) taxi mass or maximum (structural) ramp mass*

The maximum permissible total mass of an aircraft at commencement of taxiing.

*Maximum zero fuel mass*

The maximum permissible mass of an aircraft with no usable fuel.

*Minimum mass (applicable to helicopters only)*

The minimum permissible total mass for specific helicopter operations.

*Operating mass*

The dry operating mass plus take-off fuel.

*Payload*

The total mass of passengers, baggage and cargo but excluding any non-revenue load.

*Performance-limited landing mass*

The mass subject to the destination airfield limitations.

*Performance-limited take-off mass*

The take-off mass subject to departure airfield limitations.

*Ramp mass*

See 'taxi mass'.

*Regulated landing mass*

The lower of performance-limited landing mass and maximum structural landing mass.

*Regulated take-off mass*

The lower of performance-limited take-off mass and maximum structural take-off mass.

*Running (or linear) load*

The load (or mass) distributed over a defined length of a cargo compartment irrespective of load width. Example units:

- SI: N/m, kg/m;
- Non-SI: lb/in, lb/ft.

*Take-off fuel*

The total amount of usable fuel at take-off.

*Take-off mass*

The mass of an aircraft including everything and everyone carried at the commencement of the take-off for helicopters and take-off run for aeroplanes.

*Taxi mass or ramp mass*

The mass of an aircraft at the commencement of taxiing.

*Traffic load*

The total mass of passengers, baggage and cargo, including any non-revenue load.

*Zero fuel mass*

The dry operating mass plus traffic load.

| (01)                |    | Complete a sample load sheet to determine the 'allowed mass for take-off', 'allowed traffic load' and 'under load'.              | X         |     |            |      |     |    |                  |         |
| (02)                |    | Explain the purpose of each load sheet section.  | X         |     |            |      |     |    |                  |         |
| (03)                |    | Explain that the purpose of boxed maximum figures in load sheet sections is to cross-check the actual and limiting mass values.  | X         |     |            |      |     |    |                  |         |
| (04)                |    | Complete and cross-check a sample load sheet.  | X         |     |            |      |     |    |                  |         |
| <b>031 05 02 04</b> |    | <b><i>Trim sheet for large aeroplanes</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the purpose of the trim sheet and the methods to determine the CG position.  | X         |     |            |      |     |    |                  |         |
| (02)                |    | Check if the zero fuel mass CG or index is within the limits.  | X         |     |            |      |     |    |                  |         |

## SUBJECT 031 — FLIGHT PERFORMANCE AND PLANNING: MASS AND BALANCE — AEROPLANES/HELICOPTERS

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| (03)                |    | Determine the fuel index by using the 'fuel index correction table' and determine the CG position as % MAC.  | X         |     |            |      |     |    |                  |         |
| (04)                |    | Check that the take-off mass CG or index are within the limits.  | X         |     |            |      |     |    |                  |         |
| (05)                |    | Determine 'stabiliser trim units' for take-off.  | X         |     |            |      |     |    |                  |         |
| (06)                |    | Explain the difference between certified and operational CG limits.  | X         |     |            |      |     |    |                  |         |
| (07)                |    | Determine the zero fuel mass CG or index.  | X         |     |            |      |     |    |                  |         |
| (08)                |    | Explain the relationship between pitch and CG position and the operational significance.   | X         |     |            |      |     |    |                  |         |
| <b>031 05 02 05</b> |    | <b><i>Intentionally left blank</i></b>   |           |     |            |      |     |    |                  |         |
| <b>031 05 02 06</b> |    | <b><i>Other methods to present load and trim information</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                | X  | Describe and extract information from other methods of presenting load and balance information, e.g. aircraft communications addressing and reporting system (ACARS), electronic flight bags (EFBs), and the 'less paper in the cockpit' (LPC) software. | X         |     |            |      |     |    |                  |         |
| <b>031 05 03 00</b> |    | <b>Repositioning of CG</b>   |           |     |            |      |     |    |                  |         |
| <b>031 05 03 01</b> |    | <b><i>Repositioning of CG by shifting the load</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Calculate the mass to be moved over a given distance, or to/from given compartments, to establish a defined CG position.   | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Calculate the distance to move a given mass to establish a defined CG position.  | X         | X   | X          | X    | X   |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL /IR   | ATPL | CPL |    |                  |         |
| (03)                | X  | Describe the methods to check that cargo has been loaded in correct position in relation to the loading manifest, including identifying hazard of cargo loaded in reverse order (visual inspection of one or more unit load devices (ULDs)). | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Determine whether CG remains within limits if cargo has been loaded in incorrect order or at incorrect location.   | X         | X   |            |      |     |    |                  |         |
| <b>031 05 03 02</b> |    | <b><i>Repositioning of CG by additional load or ballast or by load or ballast removal</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Calculate the amount of additional load or ballast to be loaded at or removed from a given position or compartment to establish a defined CG position.   | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Calculate the loading position or compartment for a given amount of additional load or ballast to establish a defined CG position.   | X         | X   | X          | X    | X   |    |                  |         |

**‘Theoretical knowledge examinations’**

**SUBJECT 032 — FLIGHT PERFORMANCE AND PLANNING — PERFORMANCE — AEROPLANES**

*Note that the term ‘mass’ is used to describe a quantity of matter, and ‘weight’ when describing the force. However, the term ‘weight’ is normally used in aviation to colloquially describe mass. The professional pilot should always note the units to determine whether the term ‘weight’ is being used to describe a force (e.g. unit newton) or quantity of matter (e.g. unit kilogram).*

For theoretical knowledge examination purposes:

- ‘climb angle’ is assumed to be air-mass-related;
- ‘flight-path angle’ is assumed to be ground-related;
- ‘screen height for take-off’ is the vertical distance between the take-off surface and the take-off flight path at the end of the take-off distance;
- ‘screen height for landing’ is the vertical distance between the landing surface and the landing flight path from which the landing distance begins.

| (01)         | X  | State that aeroplane performance required for commercial air transport may limit the weight of a dispatched aeroplane in order to achieve a sufficient level of safety. | X         | X   |             |      |     |    |                     |         |

| Syllabus            | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter  |      |     | IR | CB-IR(A)<br>and EIR | Remarks |
|---------------------|----|--|-----------|-----|-------------|------|-----|----|---------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/<br>IR | ATPL | CPL |    |                     |         |
| (02)                | X  | Describe that the minimum level of safety required for commercial air transport is ensured through the combination of airworthiness requirements and operational limitations, i.e. the more stringent airworthiness requirements of CS-25 enable a wider range of operating conditions for these aeroplanes. | X         | X   |             |      |     |    |                     |         |
| <b>032 01 01 04</b> |    | <b>Performance definitions and safety factors</b>  |           |     |             |      |     |    |                     |         |
| (01)                | X  | Describe measured performance and explain how it is determined.  | X         | X   |             |      |     |    |                     |         |
| (02)                |    | Describe gross performance.  | X         | X   |             |      |     |    |                     |         |
| (03)                |    | Describe net performance and safety factors.   | X         | X   |             |      |     |    |                     |         |
| (04)                | X  | Describe that the size of a safety factor depends on the likelihood of the event and the range of the measured performance data.   | X         | X   |             |      |     |    |                     |         |
| (05)                |    | Describe the relationship between net and gross take-off and landing distances, and net and gross climb and descent gradients.   | X         | X   |             |      |     |    |                     |         |
| <b>032 01 02 00</b> |    | <b>General performance theory</b>  |           |     |             |      |     |    |                     |         |
| <b>032 01 02 01</b> |    | <b>Intentionally left blank</b>  |           |     |             |      |     |    |                     |         |
| <b>032 01 02 02</b> |    | <b>Definitions and terms</b>   |           |     |             |      |     |    |                     |         |
| (01)                | X  | Define the terms 'climb angle' and 'climb gradient'.   | X         | X   |             |      |     |    |                     |         |
| (02)                | X  | Define the terms 'flight-path angle' and 'flight-path gradient'.   | X         | X   |             |      |     |    |                     |         |
| (03)                | X  | Define the terms 'descent angle' and 'descent gradient'.   | X         | X   |             |      |     |    |                     |         |
| (04)                | X  | Explain the difference between climb/descent angle and flight-path angle.  | X         | X   |             |      |     |    |                     |         |

| Syllabus            | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter  |      |     | IR | CB-IR(A)<br>and EIR | Remarks |
|---------------------|----|---|-----------|-----|-------------|------|-----|----|---------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/<br>IR | ATPL | CPL |    |                     |         |
| (05)                | X  | Define 'absolute ceiling'.  | X         | X   |             |      |     |    |                     |         |
| (06)                |    | Describe 'clearway' and 'stopway' according to CS-Definitions.  | X         | X   |             |      |     |    |                     |         |
| (07)                |    | Describe:<br>— take-off run available (TORA);<br>— take-off distance available (TODA);<br>— accelerate-stop distance available (ASDA);<br>and determine each from given data or appropriate aerodrome charts.   | X         | X   |             |      |     |    |                     |         |
| (08)                |    | Describe 'screen height' including its various values.  | X         | X   |             |      |     |    |                     |         |
| (09)                | X  | Define the terms 'range' and 'endurance'.   | X         | X   |             |      |     |    |                     |         |
| (10)                |    | Define an aeroplane's 'specific range' (SR) in terms of nautical air miles (NAM) per unit of fuel, and 'specific range over the ground' (SR <sub>G</sub> ) in terms of nautical ground miles (NGM) per unit of fuel.  | X         | X   |             |      |     |    |                     |         |
| (11)                |    | Define the power available and power required.  | X         | X   |             |      |     |    |                     |         |
| <b>032 01 02 03</b> |    | <b><i>Variables influencing performance</i></b>   |           |     |             |      |     |    |                     |         |
| (01)                | X  | Name the following factors that affect aeroplane performance: pressure altitude and temperature, wind, aeroplane weight, aeroplane configuration, aeroplane anti-skid status, aeroplane centre of gravity (CG), aerodrome runway surface, and aerodrome runway slope. | X         | X   |             |      |     |    |                     |         |
| (02)                | X  | Describe how, for different density altitudes, the thrust and power available vary with speed for a propeller-driven aeroplane.   | X         | X   |             |      |     |    |                     |         |

| Syllabus            | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter  |      |     | IR | CB-IR(A)<br>and EIR | Remarks |
|---------------------|----|--|-----------|-----|-------------|------|-----|----|---------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/<br>IR | ATPL | CPL |    |                     |         |
| (03)                | X  | Describe how, for different density altitudes, the thrust and power available vary with speed for a turbojet aeroplane.                  | X         |     |             |      |     |    |                     |         |
| (04)                |    | Describe how, for different density altitudes, the drag and power required vary with indicated airspeeds (IAS) and true airspeeds (TAS). | X         | X   |             |      |     |    |                     |         |
| (05)                |    | Describe how, for different aeroplane weights and configurations, the drag and power required vary with IAS and TAS.                     | X         | X   |             |      |     |    |                     |         |
| <b>032 01 03 00</b> |    | <b>Level flight, range and endurance</b>   |           |     |             |      |     |    |                     |         |
| <b>032 01 03 01</b> |    | <b>Steady level flight</b>   |           |     |             |      |     |    |                     |         |
| (01)                | X  | Explain how drag (thrust) and power required vary with speed in straight and level flight.   | X         | X   |             |      |     |    |                     |         |
| (02)                | X  | Explain the effect of excess thrust and power on speed in level flight.  | X         | X   |             |      |     |    |                     |         |
| (03)                |    | Interpret the 'thrust/power required' and 'thrust/power available' curves in straight and level flight.                                  | X         | X   |             |      |     |    |                     |         |
| (04)                |    | Describe how the maximum achievable straight and level flight IAS and TAS vary with altitude.  | X         | X   |             |      |     |    |                     |         |
| (05)                |    | Describe situations in which a pilot may elect to fly for 'maximum endurance' or 'maximum range'.  | X         | X   |             |      |     |    |                     |         |
| <b>032 01 03 02</b> |    | <b>Range</b>   |           |     |             |      |     |    |                     |         |
| (01)                |    | Define a turbojet aeroplane's specific fuel consumption (SFC) and describe how it affects fuel flow and specific range.                  | X         |     |             |      |     |    |                     |         |
| (02)                |    | Define a propeller-driven aeroplane's SFC and describe how it affects fuel flow and specific range.                                      | X         | X   |             |      |     |    |                     |         |

| Syllabus            | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter  |      |     | IR | CB-IR(A)<br>and EIR | Remarks |
|---------------------|----|---|-----------|-----|-------------|------|-----|----|---------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/<br>IR | ATPL | CPL |    |                     |         |
| (03)                |    | Explain the optimum speed for maximum SR for a turbojet aeroplane in relation to the drag curve.                                    | X         |     |             |      |     |    |                     |         |
| (04)                |    | Explain the optimum speed to achieve maximum SR for a propeller-driven aeroplane in relation to the power required and drag graphs. | X         | X   |             |      |     |    |                     |         |
| (05)                |    | Explain the effect of aeroplane weight and CG position on fuel consumption, range and the optimum speed for maximum SR.             | X         | X   |             |      |     |    |                     |         |
| (06)                |    | State how a turbojet engine's SFC varies with temperature and thrust setting.   | X         |     |             |      |     |    |                     |         |
| (07)                |    | Explain how SR for a turbojet aeroplane varies with altitude and under different meteorological conditions.                         | X         |     |             |      |     |    |                     |         |
| (08)                |    | Explain how $SR_G$ for a propeller-driven aeroplane varies with altitude and under different meteorological conditions.             | X         | X   |             |      |     |    |                     |         |
| (09)                |    | Explain the effect of weight on the optimum altitude for maximum range.   | X         | X   |             |      |     |    |                     |         |
| (10)                |    | Describe the effect of wind on $SR_G$ and the optimum speed for $SR_G$ , when compared to SR, and the optimum speed for SR.         | X         | X   |             |      |     |    |                     |         |
| <b>032 01 03 03</b> |    | <b>Maximum endurance</b>  |           |     |             |      |     |    |                     |         |
| (01)                |    | Explain fuel flow in relation to TAS and thrust for a turbojet aeroplane.   | X         |     |             |      |     |    |                     |         |
| (02)                |    | State the speed for maximum endurance for a turbojet aeroplane.   | X         |     |             |      |     |    |                     |         |
| (03)                |    | Explain fuel flow in relation to TAS and thrust for a propeller-driven aeroplane.   | X         | X   |             |      |     |    |                     |         |

| Syllabus            | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter  |      |     | IR | CB-IR(A)<br>and EIR | Remarks |
|---------------------|----|---|-----------|-----|-------------|------|-----|----|---------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/<br>IR | ATPL | CPL |    |                     |         |
| (04)                |    | State the speed for maximum endurance for a propeller-driven aeroplane and the disadvantages of holding at this speed (e.g. high angle of attack (AoA) and lack of speed stability).  | X         | X   |             |      |     |    |                     |         |
| (05)                |    | Explain the effect of wind and altitude on endurance, and the maximum endurance speed for a turbojet aeroplane.   | X         |     |             |      |     |    |                     |         |
| (06)                |    | Explain the effect of wind and altitude on endurance, and the maximum endurance speed for a propeller-driven aeroplane.   | X         | X   |             |      |     |    |                     |         |
| (07)                |    | Describe the benefits of managing your en-route airspeed to reduce or avoid holding time, and the operational situations when it could be used (commanded by the pilot or air traffic control (ATC), when delays at arrival airport occur). | X         | X   |             |      |     |    |                     |         |
| <b>032 01 04 00</b> |    | <b>Climbing</b>   |           |     |             |      |     |    |                     |         |
| <b>032 01 04 01</b> |    | <b><i>Climbing (climb performance)</i></b>  |           |     |             |      |     |    |                     |         |
| (01)                |    | Resolve the forces during a steady climb.   | X         | X   |             |      |     |    |                     |         |
| (02)                |    | Define and explain the following terms:<br>— critical engine;<br>— speed for best angle of climb ( $V_X$ );<br>— speed for best rate of climb ( $V_Y$ ).  | X         | X   |             |      |     |    |                     |         |
| (03)                |    | Explain climb performance in relation to the thrust available and thrust required (angle of climb), and power available and power required (rate of climb).   | X         | X   |             |      |     |    |                     |         |
| (04)                |    | Explain the meaning and effect of 'excess thrust' and 'excess power' in a steady climb.   | X         | X   |             |      |     |    |                     |         |

**SUBJECT 033 — FLIGHT PERFORMANCE AND PLANNING — FLIGHT PLANNING AND MONITORING****General Student Pilot Route Manual (GSPRM)**

This document shall be referred to as the General Student Pilot Route Manual (GSPRM) and should contain as a minimum:

1. a table of contents and a list of effective pages;
2. introduction with the instrument flight rules (IFR) charts' legends;
3. 1:500 000 visual flight rule (VFR) aeronautical chart of Germany;
4. en-route low- and high-altitude IFR charts to cover the airspace above all EU Member States plus Norway, Switzerland, Liechtenstein and the Balkans;
5. en-route high-altitude chart of the North Pole (a polar stereographic projection) to illustrate current polar routes;
6. a plotting chart of the North Atlantic (with information on extended range operations with two-engined aeroplanes (ETOPS));
7. area, aerodrome/heliport, aerodrome ground movement, standard instrument departure (SID), standard instrument arrival (STAR) and instrument approach charts (IACs) for Alicante Elche, Amsterdam Schiphol, Dubrovnik Čilipi, London Heathrow, Nantes/Atlantique, Santorini and Stuttgart for aeroplane operations, and Aberdeen, De Kooy and Tromsø for helicopter operations;
8. microwave landing system (MLS) approach chart for Galbraith Lake Alaska;
9. an example of a completed air traffic service (ATS) flight plan (with instructions on how to complete it), including the ICAO model flight plan form;
10. introduction with the VFR charts' legends, aerodrome directories for Croatia, France, Germany, Spain and United Kingdom, and area, aerodrome/heliport and visual approach charts (VACs) for Aberdeen Dyce, Alicante Elche, Dubrovnik Čilipi, Friedrichshafen, Gloucestershire and Nantes/Atlantique.

The charts should have a frozen date (e.g. 01.01.2017), and be reissued on a regular basis (e.g. every 4–5 years).

The charts listed above will form the basis for the questions in licensing examinations.

There will be no obligation for any student or approved training organisation (ATO) to buy, use or issue the GSPRM (nor will it have any other subject-matter material in it), but the content will be the basis for charts which may appear in Part-FCL exams. Any chart provider (Lido, Jeppesen, Navtech, etc.) may provide the GSPRM, but the students will not be expected to learn non-ICAO standard symbology or chart requirements.

## SUBJECT 033 — FLIGHT PERFORMANCE AND PLANNING — FLIGHT PLANNING AND MONITORING

*Note that the term ‘mass’ is used to describe a quantity of matter, and ‘weight’ when describing the force. However, the term ‘weight’ is normally used in aviation to colloquially describe mass. The professional pilot should always note the units to determine whether the term ‘weight’ is being used to describe a force (e.g. unit newton) or quantity of matter (e.g. unit kilogram).*

| (01)                |    | State the reasons for possible deviations from the planned track and planned timings.   | X         | X   | X          | X    | X   | X  |                  |         |
| (02)                |    | Calculate GS by using actual in-flight parameters.  | X         | X   | X          | X    | X   | X  |                  |         |

## SUBJECT 033 — FLIGHT PERFORMANCE AND PLANNING — FLIGHT PLANNING AND MONITORING

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (03)                |    | Calculate the expected leg times by using actual in-flight parameters.   | X         | X   | X          | X    | X   | X  |                  |         |
| (04)                |    | Enter, in the progress of flight, at the checkpoint or turning point, the 'actual time-over' and the 'estimated time-over' for the next checkpoint into the flight plan. | X         | X   | X          | X    | X   |    |                  |         |
| (05)                |    | State that it is necessary to determine the position of the aircraft accurately before commencing descent in order to ensure safe ground clearance.                      | X         | X   | X          | X    | X   |    |                  |         |
| (06)                |    | Calculate revised ETA based on changes to the pre-flight plan, including changes of W/V, cruise level, OAT, distances, Mach number and calibrated airspeed (CAS).        | X         | X   | X          | X    | X   |    |                  |         |
| <b>033 06 01 02</b> |    | <b><i>In-flight fuel management</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain why fuel checks must be carried out in flight at regular intervals and why relevant fuel data must be recorded.  | X         | X   | X          | X    | X   | X  |                  |         |
| (02)                |    | Assess deviations of actual fuel consumption from planned consumption.   | X         | X   | X          | X    | X   | X  |                  |         |
| (03)                |    | Calculate fuel quantity used, fuel consumption, and fuel remaining at navigation checkpoints/waypoints.  | X         | X   | X          | X    | X   | X  |                  |         |
| (04)                |    | Compare the actual with the planned fuel consumption by means of calculation.  | X         | X   | X          | X    | X   | X  |                  |         |
| (05)                |    | Determine the remaining range and endurance by means of calculation.   | X         | X   | X          | X    | X   | X  |                  |         |
| (06)                |    | Calculate the revised fuel consumption based on changes to the pre-flight plan, including changes of W/V, cruise level, OAT, distances, Mach number and CAS.             | X         | X   | X          | X    | X   | X  |                  |         |

## SUBJECT 033 — FLIGHT PERFORMANCE AND PLANNING — FLIGHT PLANNING AND MONITORING

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| <b>033 06 02 00</b> |    | <b><i>In-flight replanning</i></b>  |           |     |            |      |     |    |                  |         |
| <b>033 06 02 01</b> |    | <b><i>Deviation from planned data</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | State that the commander is responsible for ensuring that, even in case of diversion, the remaining fuel is not less than the fuel required to proceed to an aerodrome where a safe landing can be made, with final reserve fuel remaining.   | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Explain that, in the case of an in-flight update, the commander has to check the following:<br>— the suitability of the new destination or alternate aerodrome;<br>— meteorological conditions on revised routing and at revised destination or alternate aerodrome;<br>— the aircraft must be able to land with the prescribed final reserve fuel. | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Calculate the revised destination/alternate aerodrome landing mass from given latest data.  | X         | X   | X          | X    | X   |    |                  |         |

PERFORMANCE — HELICOPTERS’**

**to**

**AMC1 FCL.310; FCL.515(b); FCL.615(b)**

**‘Theoretical knowledge examinations’**

**SUBJECT 034 — FLIGHT PERFORMANCE AND PLANNING — PERFORMANCE — HELICOPTERS**

*Note that the term ‘mass’ is used to describe a quantity of matter, and ‘weight’ when describing the force. However, the term ‘weight’ is normally used in aviation to colloquially describe mass. The professional pilot should always note the units to determine whether the term ‘weight’ is being used to describe a force (e.g. unit newton) or quantity of matter (e.g. unit kilogram).*

|                     |    | <b>capability</b>  |           |     |            |      |     |    |                  |         |
| <b>034 03 01 01</b> |    | <b><i>Responsibility for operations without an assured safe forced landing capability</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State the responsibility of the operator for assuring safe forced landings (point CAT.POL.H.305 of the EU Regulation on air operations).           |           |     | X          | X    |     |    |                  |         |
| <b>034 03 02 00</b> |    | <b>Take-off</b>  |           |     |            |      |     |    |                  |         |
| <b>034 03 02 01</b> |    | <b><i>Take-off requirements</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State the climb and other requirements for take-off.   |           |     | X          | X    |     |    |                  |         |
| <b>034 03 03 00</b> |    | <b>Take-off flight path</b>  |           |     |            |      |     |    |                  |         |
| <b>034 03 03 01</b> |    | <b><i>Take-off flight path requirements</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State the height above the take-off surface at which at least the requirements for the take-off flight path for Performance Class 1 are to be met. |           |     | X          | X    |     |    |                  |         |
| <b>034 03 04 00</b> |    | <b>Landing</b>   |           |     |            |      |     |    |                  |         |
| <b>034 03 04 01</b> |    | <b><i>Landing requirements</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | State the requirements for the climb capability when OEI.  |           |     | X          | X    |     |    |                  |         |
| (02)                |    | State the options for a Performance Class 2 operation in the case of a critical power-unit failure at any point in the approach path.              |           |     | X          | X    |     |    |                  |         |
| (03)                |    | State the limitations for operations to/from a helideck.   |           |     | X          | X    |     |    |                  |         |
| <b>034 04 00 00</b> |    | <b>PERFORMANCE CLASS 1 — HELICOPTERS CERTIFIED</b>   |           |     |            |      |     |    |                  |         |

## SUBJECT 034 — FLIGHT PERFORMANCE AND PLANNING — PERFORMANCE — HELICOPTERS

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | <b>ACCORDING TO CS-29 ONLY</b>  |           |     |            |      |     |    |                  |         |
| <b>034 04 01 00</b> |    | <b>Take-off</b>   |           |     |            |      |     |    |                  |         |
| <b>034 04 01 01</b> |    | <b>Take-off distances</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the effects of the following variables on the flight-path and take-off distances:<br>— take-off with HIGE or HOGE;<br>— take-off procedure;<br>— obstacle clearances both laterally and vertically;<br>— take-off from non-elevated heliports;<br>— take-off from elevated heliports or helidecks;<br>— take-off from a TLOF. |           |     | X          | X    |     |    |                  |         |
| (02)                |    | Explain the effects of the following variables on take-off distances:<br>— mass;<br>— take-off configuration;<br>— bleed-air configurations.  |           |     | X          | X    |     |    |                  |         |
| (03)                |    | Explain the effects of the following meteorological conditions on take-off distances:<br>— wind;<br>— temperature;<br>— pressure altitude.  |           |     | X          | X    |     |    |                  |         |
| (04)                |    | Explain the take-off distances for specified conditions and configuration for AEO and OEI.  |           |     | X          | X    |     |    |                  |         |
| (05)                |    | Explain the effect of obstacles on the take-off distance required.  |           |     | X          | X    |     |    |                  |         |

## SUBJECT 034 — FLIGHT PERFORMANCE AND PLANNING — PERFORMANCE — HELICOPTERS

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (06)                |    | State the assumed reaction time between engine failure and recognition.   |           |     | X          | X    |     |    |                  |         |
| (07)                |    | Explain that the flight must be carried out visually up to TDP.   |           |     | X          | X    |     |    |                  |         |
| <b>034 04 01 02</b> |    | <b>Rejected take-off distance required (helicopter) (RTODR(H))</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain RTODR(H) for specified conditions and configuration for AEO and OEI.  |           |     | X          | X    |     |    |                  |         |
| (02)                |    | Explain the time-to-decide allowance (decision time) and deceleration procedure.  |           |     | X          | X    |     |    |                  |         |
| <b>034 04 01 03</b> |    | <b>Intentionally left blank</b>   |           |     |            |      |     |    |                  |         |
| <b>034 04 01 04</b> |    | <b>Take-off climb</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Define the segments of the take-off flight path.  |           |     | X          | X    |     |    |                  |         |
| (02)                |    | Explain the effect of changes in the configuration on power and speed in the segments.  |           |     | X          | X    |     |    |                  |         |
| (03)                |    | Explain the climb-gradient requirements for OEI.  |           |     | X          | X    |     |    |                  |         |
| (04)                |    | State the minimum altitude over the take-off path when flying at the take-off safety speed in a Category A helicopter ( $V_{TOSS}$ ). |           |     | X          | X    |     |    |                  |         |
| (05)                |    | Describe the influence of airspeed selection, acceleration and turns on the climb gradient and best rate-of-climb speed.              |           |     | X          | X    |     |    |                  |         |
| <b>034 04 01 05</b> |    | <b>Obstacle-limited take-off</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the operational regulations for obstacle   |           |     | X          | X    |     |    |                  |         |

## SUBJECT 034 — FLIGHT PERFORMANCE AND PLANNING — PERFORMANCE — HELICOPTERS

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | clearance of the take-off flight path in the departure sector with OEI.   |           |     |            |      |     |    |                  |         |
| <b>034 04 01 06</b> |    | <b><i>Use of helicopter performance data</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Determine from helicopter performance data sheets the maximum mass that satisfies the operational regulations for take-off in terms of regulated take-off mass, TODRH and minimum gradients for climb and obstacle clearance. |           |     | X          | X    |     |    |                  |         |
| <b>034 04 02 00</b> |    | <b>Climb</b>  |           |     |            |      |     |    |                  |         |
| <b>034 04 02 01</b> |    | <b><i>Climb techniques</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the effect of climbing with best rate-of-climb speed ( $V_Y$ ).   |           |     | X          | X    |     |    |                  |         |
| (02)                |    | Explain the influence of altitude on $V_Y$ .  |           |     | X          | X    |     |    |                  |         |
| <b>034 04 02 02</b> |    | <b><i>Use of helicopter flight data</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Find the rate of climb and calculate the time to climb to a given altitude.   |           |     | X          | X    |     |    |                  |         |
| <b>034 04 03 00</b> |    | <b>Cruise</b>   |           |     |            |      |     |    |                  |         |
| <b>034 04 03 01</b> |    | <b><i>Cruise techniques</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the cruise procedures for 'maximum endurance' and 'maximum range'.  |           |     | X          | X    |     |    |                  |         |
| <b>034 04 03 02</b> |    | <b><i>Maximum endurance</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain fuel flow in relation to true airspeed (TAS).   |           |     | X          | X    |     |    |                  |         |
| (02)                |    | Explain the speed for maximum endurance.  |           |     | X          | X    |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| <b>034 04 03 03</b> |    | <b>Maximum range</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the speed for maximum range.  |           |     | X          | X    |     |    |                  |         |
| <b>034 04 03 04</b> |    | <b>Maximum cruise</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the speed for maximum cruise.   |           |     | X          | X    |     |    |                  |         |
| <b>034 04 03 05</b> |    | <b>Cruise altitudes</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the factors which might affect or limit the operating altitude.   |           |     | X          | X    |     |    |                  |         |
| (02)                |    | Understand the relation between power setting, fuel consumption, cruising speed and altitude.                               |           |     | X          | X    |     |    |                  |         |
| <b>034 04 03 06</b> |    | <b>Use of helicopter performance data</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Determine the fuel consumption from the helicopter performance data sheets in accordance with altitude and helicopter mass. |           |     | X          | X    |     |    |                  |         |
| <b>034 04 04 00</b> |    | <b>En-route one-engine-inoperative (OEI)</b>  |           |     |            |      |     |    |                  |         |
| <b>034 04 04 01</b> |    | <b>Requirements for en-route flights with OEI</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | State the flight-path clearance requirements.   |           |     | X          | X    |     |    |                  |         |
| (02)                |    | Explain drift-down techniques.  |           |     | X          | X    |     |    |                  |         |
| (03)                |    | State the reduction in the flight-path width when navigational accuracy can be achieved.                                    |           |     | X          | X    |     |    |                  |         |
| <b>034 04 04 02</b> |    | <b>Use of helicopter flight data</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Find the single-engine service ceiling, range and endurance from given engine-inoperative charts.                           |           |     | X          | X    |     |    |                  |         |

## SUBJECT 034 — FLIGHT PERFORMANCE AND PLANNING — PERFORMANCE — HELICOPTERS

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (02)                |    | Find OEI operating data from suitable charts.   |           |     | X          | X    |     |    |                  |         |
| (03)                |    | Find the amount of fuel to be jettisoned in order to reduce helicopter mass.  |           |     | X          | X    |     |    |                  |         |
| (04)                |    | Calculate the relevant parameters for drift-down procedures.  |           |     | X          | X    |     |    |                  |         |
| <b>034 04 05 00</b> |    | <b>Descent</b>  |           |     |            |      |     |    |                  |         |
| <b>034 04 05 01</b> |    | <b><i>Use of helicopter flight data</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Find the rate of descent and calculate the time to descend to a given altitude.   |           |     | X          | X    |     |    |                  |         |
| <b>034 04 06 00</b> |    | <b>Landing</b>  |           |     |            |      |     |    |                  |         |
| <b>034 04 06 01</b> |    | <b><i>Landing requirements</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State the requirements for landing.   |           |     | X          | X    |     |    |                  |         |
| <b>034 04 06 02</b> |    | <b><i>Landing procedures</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the procedure for critical power-unit failure before and after the landing decision point.  |           |     | X          | X    |     |    |                  |         |
| (02)                |    | Explain that the portion of flight after the landing decision point must be carried out visually.   |           |     | X          | X    |     |    |                  |         |
| (03)                |    | Explain the procedures and required obstacle clearances for landings on different heliports/helidecks.  |           |     | X          | X    |     |    |                  |         |
| <b>034 04 06 03</b> |    | <b><i>Use of helicopter performance data</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Determine from helicopter performance data sheets the maximum mass that satisfies the operational regulations for landing in terms of regulated landing |           |     | X          | X    |     |    |                  |         |

## SUBJECT 040 — HUMAN PERFORMANCE AND LIMITATIONS

| Syllabus reference | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| 040 00 00 00       |    | HUMAN PERFORMANCE AND LIMITATIONS   |           |     |            |      |     |    |                  |         |
| 040 01 00 00       |    | HUMAN FACTORS: BASIC CONCEPTS   |           |     |            |      |     |    |                  |         |
| 040 01 01 00       |    | Human factors in aviation   |           |     |            |      |     |    |                  |         |
| 040 01 01 01       |    | <i>Becoming a competent pilot</i>   |           |     |            |      |     |    |                  |         |
| (01)               |    | State that competence is based on knowledge, skills and attitudes of the individual pilot, and list the ICAO eight core competencies:<br>— application of procedures;<br>— communication;<br>— aircraft flight path management, automation;<br>— aircraft flight path management, manual control;<br>— leadership and teamwork;<br>— problem-solving and decision-making;<br>— situation awareness;<br>— workload management. | X         | X   | X          | X    | X   | X  |                  |         |
| 040 01 02 00       |    | Intentionally left blank  |           |     |            |      |     |    |                  |         |
| 040 01 03 00       |    | Flight safety concepts  |           |     |            |      |     |    |                  |         |
| 040 01 03 01       |    | <i>Threat and error management (TEM) model and SHELL model</i>  |           |     |            |      |     |    |                  |         |
| (01)               |    | Explain the three components of the TEM model.  | X         | X   | X          | X    | X   | X  | X                |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter  |      |     | IR | CB-IR(A)<br>and EIR | Remarks |
|---------------------|----|---|-----------|-----|-------------|------|-----|----|---------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/<br>IR | ATPL | CPL |    |                     |         |
| (02)                |    | Explain and give examples of latent threats.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (03)                |    | Explain and give examples of environmental threats.   | X         | X   | X           | X    | X   | X  | X                   |         |
| (04)                |    | Explain and give examples of organisational threats.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (05)                |    | Explain and give a definition of 'error' according to the TEM model of ICAO Doc 9683 (Part II, Chapter 2).                      | X         | X   | X           | X    | X   | X  | X                   |         |
| (06)                |    | Give examples of different countermeasures which may be used in order to manage threats, errors, and undesired aircraft states. | X         | X   | X           | X    | X   | X  | X                   |         |
| (07)                |    | Explain and give examples of procedural error, communication errors, and aircraft handling errors.                              | X         | X   | X           | X    | X   | X  | X                   |         |
| (08)                |    | Explain and give examples of 'undesired aircraft states'.   | X         | X   | X           | X    | X   | X  |                     |         |
| (09)                |    | State the components of the SHELL model.  | X         | X   | X           | X    | X   | X  |                     |         |
| (10)                |    | State the relevance of the SHELL model to the work in the cockpit.  | X         | X   | X           | X    | X   | X  |                     |         |
| <b>040 01 04 00</b> |    | <b>Safety culture</b>   |           |     |             |      |     |    |                     |         |
| <b>040 01 04 01</b> |    | <b>Safety culture and safety management</b>   |           |     |             |      |     |    |                     |         |
| (01)                |    | Distinguish between 'open cultures' and 'closed cultures'.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (02)                |    | Illustrate how safety culture is reflected in national culture.   | X         | X   | X           | X    | X   | X  | X                   |         |
| (03)                |    | Discuss the established expression 'safety first' in a commercial entity.   | X         | X   | X           | X    | X   | X  |                     |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter  |      |     | IR | CB-IR(A)<br>and EIR | Remarks |
|---------------------|----|---|-----------|-----|-------------|------|-----|----|---------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/<br>IR | ATPL | CPL |    |                     |         |
| (04)                |    | Explain James Reason's 'Swiss Cheese Model'.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (05)                |    | State the important factors that promote a good safety culture.   | X         | X   | X           | X    | X   | X  | X                   |         |
| (06)                |    | Distinguish between 'just culture' and 'non-punitive culture'.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (07)                |    | Name the five components which form safety culture (according to James Reason: informed culture, reporting culture, learning culture, just culture, flexible culture).  | X         | X   | X           | X    | X   | X  | X                   |         |
| (08)                |    | Name the basic concepts of safety management system (SMS) (including hazard identification and risk management) and its relationship with safety culture in order to:<br>— define how the organisation is set up to manage risks;<br>— identify workplace risk and implement suitable controls;<br>— implement effective communication across all levels of the organisation. | X         | X   | X           | X    | X   | X  | X                   |         |
| <b>040 02 00 00</b> |    | <b>Basics of aviation physiology and health maintenance</b>   |           |     |             |      |     |    |                     |         |
| <b>040 02 01 00</b> |    | <b>Basics of flight physiology</b>  |           |     |             |      |     |    |                     |         |

| <b>040 02 01 02</b> |    | <b><i>Respiratory and circulatory system</i></b>  |           |     |             |      |     |    |                     |         |
| (01)                |    | List the main components of the respiratory system and their function.  | X         | X   | X           | X    | X   | X  |                     |         |
| (02)                |    | Identify the different volumes of air in the lungs and state the normal respiratory rate.                                 | X         | X   | X           | X    | X   | X  |                     |         |
| (03)                |    | Explain the role of carbon dioxide in the control and regulation of respiration.  | X         | X   | X           | X    | X   | X  |                     |         |
| (04)                |    | Describe the basic processes of external respiration and internal respiration.  | X         | X   | X           | X    | X   | X  |                     |         |
| (05)                |    | List the factors that determine pulse rate.   | X         | X   | X           | X    | X   | X  |                     |         |
| (06)                |    | Name the major components of the circulatory system and describe their function.  | X         | X   | X           | X    | X   | X  |                     |         |
| (07)                |    | State the values for a normal pulse rate and the average cardiac output (heart rate × stroke volume) of an adult at rest. | X         | X   | X           | X    | X   | X  |                     |         |
| (08)                |    | Define ‘systolic’ and ‘diastolic’ blood pressure.   | X         | X   | X           | X    | X   | X  |                     |         |
| (09)                |    | State the normal blood pressure ranges and units of measurement.  | X         | X   | X           | X    | X   | X  |                     |         |
| (10)                |    | List the main constituents of blood and describe their functions.   | X         | X   | X           | X    | X   | X  |                     |         |
| (11)                |    | Stress the function of haemoglobin in the circulatory system.   | X         | X   | X           | X    | X   | X  |                     |         |
| (12)                |    | Define ‘anaemia’ and state its common causes.   | X         | X   | X           | X    | X   | X  |                     |         |
| (13)                |    | Indicate the effect of increasing altitude on haemoglobin oxygen saturation.  | X         | X   | X           | X    | X   | X  |                     |         |

|                    |    |  | ATPL      | CPL | ATPL/<br>IR | ATPL | CPL |    |                     |         |
|                    |    | <b>Hypertension and hypotension</b>  |           |     |             |      |     |    |                     |         |
| (14)               |    | Define 'hypertension' and 'hypotension'.   | X         | X   | X           | X    | X   | X  |                     |         |
| (15)               |    | List the effects that high and low blood pressure will have on some normal functions of the human body.      | X         | X   | X           | X    | X   | X  |                     |         |
| (16)               |    | State that both hypotension and hypertension may disqualify a pilot from obtaining medical clearance to fly. | X         | X   | X           | X    | X   | X  |                     |         |
| (17)               |    | List the factors which can lead to hypertension for an individual.   | X         | X   | X           | X    | X   | X  |                     |         |
| (18)               |    | State the corrective actions that may be taken to reduce high blood pressure.                                | X         | X   | X           | X    | X   | X  |                     |         |
| (19)               |    | Stress that hypertension is the major factor of strokes in the general population.                           | X         | X   | X           | X    | X   | X  |                     |         |
|                    |    | <b>Coronary artery disease</b>   |           |     |             |      |     |    |                     |         |
| (20)               |    | Differentiate between 'angina' and 'heart attack'.   | X         | X   | X           | X    | X   | X  |                     |         |
| (21)               |    | Explain the major risk factors for coronary disease.   | X         | X   | X           | X    | X   | X  |                     |         |
| (22)               |    | State the role physical exercise plays in reducing the chances of developing coronary disease.               | X         | X   | X           | X    | X   | X  |                     |         |
|                    |    | <b>Hypoxia</b>   |           |     |             |      |     |    |                     |         |
| (23)               |    | Define the two major forms of hypoxia (hypoxic and anaemic), and the common causes of both.                  | X         | X   | X           | X    | X   | X  |                     |         |
| (24)               |    | State the symptoms of hypoxia.   | X         | X   | X           | X    | X   | X  |                     |         |
| (25)               |    | State that healthy people are able to compensate for   | X         | X   | X           | X    | X   | X  |                     |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter  |      |     | IR | CB-IR(A)<br>and EIR | Remarks |
|--------------------|----|--|-----------|-----|-------------|------|-----|----|---------------------|---------|
|                    |    |  | ATPL      | CPL | ATPL/<br>IR | ATPL | CPL |    |                     |         |
|                    |    | altitudes up to approximately 10 000–12 000 ft.  |           |     |             |      |     |    |                     |         |
| (26)               |    | Name the three physiological thresholds and allocate the corresponding altitudes for each of them:<br>— reaction threshold (7 000 ft);<br>— disturbance threshold (10–12 000 ft); and<br>— critical threshold (22 000 ft). | X         | X   | X           | X    | X   | X  |                     |         |
| (27)               |    | State the altitude at which short-term memory begins to be affected by hypoxia.  | X         | X   | X           | X    | X   | X  |                     |         |
| (28)               |    | Define the terms ‘time of useful consciousness’ (TUC) and ‘effective performance time’ (EPT).  | X         | X   | X           | X    | X   | X  |                     |         |
| (29)               |    | State that TUC varies among individuals, but the approximate values for a person seated (at rest) are:<br>20 000 ft      30 min<br>30 000 ft      1–2 min<br>35 000 ft      30–90 s<br>40 000 ft      15–20 s              | X         | X   | X           | X    | X   | X  |                     |         |
| (30)               |    | List the factors that determine the severity of hypoxia.   | X         | X   | X           | X    | X   | X  |                     |         |
| (31)               |    | State the equivalent altitudes when breathing ambient air and 100 % oxygen at mean sea level (MSL) and at approximately 10 000, 30 000 and 40 000 ft.  | X         | X   | X           | X    | X   | X  |                     |         |
|                    |    | <b>Hyperventilation</b>  |           |     |             |      |     |    |                     |         |
| (32)               |    | Describe the role of carbon dioxide in hyperventilation.   | X         | X   | X           | X    | X   | X  |                     |         |
| (33)               |    | Define the term ‘hyperventilation’.  | X         | X   | X           | X    | X   | X  |                     |         |
| (34)               |    | List the factors that cause hyperventilation.  | X         | X   | X           | X    | X   | X  |                     |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (35)               |    | State that hyperventilation may be caused by psychological or physiological reasons.  | X         | X   | X          | X    | X   | X  |                  |         |
| (36)               |    | List the signs and symptoms of hyperventilation.  | X         | X   | X          | X    | X   | X  |                  |         |
| (37)               |    | List the measures which may be taken to counteract hyperventilation: breath slowly, close one opening of the nose, speak loudly, place a paper bag over nose and mouth.   | X         | X   | X          | X    | X   | X  |                  |         |
|                    |    | <b><i>Decompression sickness/illness</i></b>  |           |     |            |      |     |    |                  |         |
| (38)               |    | State the normal range of cabin pressure altitude in pressurised commercial air transport aircraft and describe its protective function for aircrew and passengers.   | X         | X   | X          | X    | X   | X  |                  |         |
| (39)               |    | List the vital actions the crew has to perform when cabin pressurisation is lost (oxygen mask on, emergency descent, land as soon as possible, and no further flight for the next minimum 24 hours). State that decompression sickness symptoms can occur up to 24 hours later. | X         | X   | X          | X    | X   | X  |                  |         |
| (40)               |    | Identify the causes of decompression sickness in flight operation.  | X         | X   | X          | X    | X   | X  |                  |         |
| (41)               |    | State how decompression sickness can be prevented.  | X         | X   | X          | X    | X   | X  |                  |         |
| (42)               |    | List the symptoms of decompression sickness (bends, creeps, chokes, staggers).  | X         | X   | X          | X    | X   | X  |                  |         |
| (43)               |    | Indicate how decompression sickness may be treated.   | X         | X   | X          | X    | X   | X  |                  |         |
| (44)               |    | Define the hazards of diving and flying, and give the recommendations associated with these activities.   | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|

|                     |    | <b>Motion sickness</b>  |           |     |             |      |     |    |                     |         |
| (05)                |    | Describe air sickness and its accompanying symptoms.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (06)                |    | List the causes of air sickness.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (08)                |    | Describe the necessary actions to be taken to counteract the symptoms of air sickness.  | X         | X   | X           | X    | X   | X  |                     |         |
| <b>040 02 02 06</b> |    | <b>Integration of sensory inputs</b>  |           |     |             |      |     |    |                     |         |
| (01)                |    | State the interaction between vision, equilibrium, proprioception and hearing to obtain spatial orientation in flight.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (02)                |    | Define the term 'illusion'.   | X         | X   | X           | X    | X   | X  | X                   |         |
| (03)                |    | Give examples of visual illusions based on shape constancy, size constancy, aerial perspective, atmospheric perspective, the absence of focal or ambient cues, autokinesis, vectional false horizons, field myopia, and surface planes. | X         | X   | X           | X    | X   | X  | X                   |         |
| (04)                |    | Relate these illusions to problems that may be experienced in flight and identify the danger attached to them.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (05)                |    | List approach and landing illusions for slope of the runway, black-hole approach, and terrain around runway, and state the danger involved with   | X         | X   | X           | X    | X   | X  | X                   |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter  |      |     | IR | CB-IR(A)<br>and EIR | Remarks |
|---------------------|----|---|-----------|-----|-------------|------|-----|----|---------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/<br>IR | ATPL | CPL |    |                     |         |
|                     |    | recommendations to avoid or counteract the problems with high or low approach or flare at the wrong time.   |           |     |             |      |     |    |                     |         |
| (06)                |    | State the problems associated with flickering lights (strobe lights, anti-collision lights, propellers and rotors under certain light conditions, etc.).  | X         | X   | X           | X    | X   | X  | X                   |         |
| (07)                |    | Describe vestibular illusions caused by the angular accelerations (the Leans, Coriolis) and linear accelerations (somatogravic, G-effect).  | X         | X   | X           | X    | X   | X  | X                   |         |
| (08)                |    | Relate the above-mentioned vestibular illusions to problems encountered in flight and state the dangers involved.   | X         | X   | X           | X    | X   | X  | X                   |         |
| (09)                |    | State that the 'seat-of-the-pants' sense is completely unreliable when visual contact with the ground is lost or when flying in instrument meteorological conditions (IMC) or with a poor visual horizon. | X         | X   | X           | X    | X   | X  | X                   |         |
| (10)                |    | Differentiate between vertigo, Coriolis effect, and spatial disorientation.   | X         | X   | X           | X    | X   | X  | X                   |         |
| (11)                |    | List the measures to prevent or overcome spatial disorientation.  | X         | X   | X           | X    | X   | X  | X                   |         |
| <b>040 02 03 00</b> |    | <b>Health and hygiene</b>   |           |     |             |      |     |    |                     |         |
| <b>040 02 03 01</b> |    | <b><i>Intentionally left blank</i></b>  |           |     |             |      |     |    |                     |         |
| <b>040 02 03 02</b> |    | <b><i>Body rhythm and sleep</i></b>   |           |     |             |      |     |    |                     |         |
| (01)                |    | Name some internal body rhythms and their relevance to sleep. Explain that the most important of which is body temperature.   | X         | X   | X           | X    |     |    |                     |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter  |      |     | IR | CB-IR(A)<br>and EIR | Remarks |
|--------------------|----|---|-----------|-----|-------------|------|-----|----|---------------------|---------|
|                    |    |   | ATPL      | CPL | ATPL/<br>IR | ATPL | CPL |    |                     |         |
| (02)               |    | Explain the term 'circadian rhythm'.  | X         | X   | X           | X    | X   |    |                     |         |
| (03)               |    | State the approximate duration of a 'free-running' rhythm.  | X         | X   | X           | X    | X   |    |                     |         |
| (04)               |    | Explain the significance of the 'internal clock' in regulating the normal circadian rhythm.   | X         | X   | X           | X    | X   |    |                     |         |
| (05)               |    | State the effect of the circadian rhythm of body temperature on an individual's performance standard and on an individual's sleep patterns. | X         | X   | X           | X    | X   |    |                     |         |
| (06)               |    | List and describe the stages of a sleep cycle.  | X         | X   | X           | X    | X   |    |                     |         |
| (07)               |    | Differentiate between rapid eye movement (REM) and non-REM sleep.   | X         | X   | X           | X    | X   |    |                     |         |
| (08)               |    | Explain the function of sleep and describe the effects of insufficient sleep on performance.  | X         | X   | X           | X    | X   |    |                     |         |
| (09)               |    | Explain the simple calculations for the sleep/wake credit/debit situation.  | X         | X   | X           | X    | X   |    |                     |         |
| (10)               |    | Explain how sleep debit can become cumulative.  | X         | X   | X           | X    | X   |    |                     |         |
| (11)               |    | State the time formula for the adjustment of body rhythms to the new local time scale after crossing time zones.                            | X         | X   | X           | X    | X   |    |                     |         |
| (12)               |    | State the problems caused by circadian dysrhythmia (jet lag) with regard to an individual's performance and sleep.                          | X         | X   | X           | X    | X   |    |                     |         |
| (13)               |    | Differentiate between the effects of westbound and eastbound travel.  | X         | X   | X           | X    | X   |    |                     |         |
| (14)               |    | Explain the interactive effects of circadian rhythm and   | X         | X   | X           | X    | X   |    |                     |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |

|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | vigilance on a pilot's performance during flight as the duty day elapses.   |           |     |            |      |     |    |                  |         |
| (15)                |    | Describe the main effects of lack of sleep on an individual's performance.  | X         | X   | X          | X    | X   |    |                  |         |
| (16)                |    | List the possible strategies to cope with jet lag.  | X         | X   | X          | X    | X   |    |                  |         |
| <b>040 02 03 03</b> |    | <b>Problem areas for pilots</b>   |           |     |            |      |     |    |                  |         |
|                     |    | <b>Common minor ailments</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State the role of the Eustachian tube in equalising pressure between the middle ear and the environment.  | X         | X   | X          | X    | X   | X  |                  |         |
| (02)                |    | State that the in-flight environment may increase the severity of symptoms which may be minor while on the ground.                                  | X         | X   | X          | X    | X   | X  |                  |         |
| (03)                |    | List the negative effects of suffering from colds or flu on flight operations especially with regard to the middle ear, the sinuses, and the teeth. | X         | X   | X          | X    | X   | X  |                  |         |
| (04)                |    | State when a pilot should seek medical advice from an aeromedical examiner (AME) or aeromedical centre (AeMC).                                      | X         | X   | X          | X    | X   | X  |                  |         |
| (05)                |    | Describe the measures to prevent or clear problems due to pressure changes during flight.   | X         | X   | X          | X    | X   | X  |                  |         |
|                     |    | <b>Entrapped gases and barotrauma</b>   |           |     |            |      |     |    |                  |         |
| (06)                |    | Define 'barotrauma'.  | X         | X   | X          | X    | X   | X  |                  |         |
| (07)                |    | Differentiate between otic, sinus, gastrointestinal and aerodontalgia (of the teeth) barotraumas and explain avoidance strategies.                  | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter  |      |     | IR | CB-IR(A)<br>and EIR | Remarks |
|--------------------|----|--|-----------|-----|-------------|------|-----|----|---------------------|---------|
|                    |    |  | ATPL      | CPL | ATPL/<br>IR | ATPL | CPL |    |                     |         |
| (08)               |    | Explain why the effects of otic barotrauma can be worse in the descent.  | X         | X   | X           | X    | X   | X  |                     |         |
|                    |    | <b>Gastrointestinal upsets</b>   |           |     |             |      |     |    |                     |         |
| (09)               |    | State the effects of gastrointestinal upsets that may occur during flight.   | X         | X   | X           | X    | X   | X  |                     |         |
| (10)               |    | List the precautions that should be observed to reduce the occurrence of gastrointestinal upsets.  | X         | X   | X           | X    | X   | X  |                     |         |
| (11)               |    | Indicate the major sources of gastrointestinal upsets.   | X         | X   | X           | X    | X   | X  |                     |         |
|                    |    | <b>Obesity</b>   |           |     |             |      |     |    |                     |         |
| (12)               |    | Define 'obesity'.  | X         | X   | X           | X    | X   | X  |                     |         |
| (13)               |    | State the following harmful effects obesity can cause: <ul style="list-style-type: none"> <li>— possibility of developing coronary problems;</li> <li>— increased chances of developing diabetes;</li> <li>— reduced ability to withstand G-forces;</li> <li>— development of problems with the joints of the limbs;</li> <li>— general circulatory problems;</li> <li>— reduced ability to cope with hypoxia or decompression sickness;</li> <li>— sleep apnoea.</li> </ul> | X         | X   | X           | X    | X   | X  |                     |         |
| (14)               |    | Describe the problems associated with Type 2 (mostly adult) diabetes: <ul style="list-style-type: none"> <li>— risk factors;</li> <li>— insulin resistance;</li> <li>— complications (vascular, neurological) and the</li> </ul>   | X         | X   | X           | X    | X   | X  |                     |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter  |      |     | IR | CB-IR(A)<br>and EIR | Remarks |
|--------------------|----|--|-----------|-----|-------------|------|-----|----|---------------------|---------|
|                    |    |  | ATPL      | CPL | ATPL/<br>IR | ATPL | CPL |    |                     |         |
|                    |    | consequences for the medical licence;<br>— pilots are not protected from Type 2 diabetes more than other people.   |           |     |             |      |     |    |                     |         |
| (15)               |    | Describe the typical back problems (unspecific back pain, slipped disc) that pilots have. Explain also the ways of preventing and treating these problems:<br>— good sitting posture;<br>— lumbar support;<br>— good physical condition;<br>— in-flight exercise, if possible;<br>— physiotherapy. | X         | X   | X           | X    | X   | X  |                     |         |

| (01)                |    | Explain the link between the types of memory (to include sensory, working/short-term and long-term memory).                    | X         | X   | X          | X    | X   | X  |                  |         |
| (02)                |    | Describe the differences between the types of memory in terms of capacity and retention time.                                  | X         | X   | X          | X    | X   | X  |                  |         |
| (03)                |    | Justify the importance of sensory-store memories in processing information.  | X         | X   | X          | X    | X   | X  |                  |         |
| (04)                |    | State the average maximum number of separate items that may be held in working memory ( $5 \pm 2$ ).                           | X         | X   | X          | X    | X   | X  |                  |         |
| (05)                |    | Stress how interruption can affect short-term/working memory.  | X         | X   | X          | X    | X   | X  |                  |         |
| (06)                |    | Give examples of items that are important for pilots to hold in working memory during flight.                                  | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter  |      |     | IR | CB-IR(A)<br>and EIR | Remarks |
|---------------------|----|--|-----------|-----|-------------|------|-----|----|---------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/<br>IR | ATPL | CPL |    |                     |         |
| (07)                |    | Describe how the capacity of the working-memory store may be increased.  | X         | X   | X           | X    | X   | X  |                     |         |
| (08)                |    | State the subdivisions of long-term memory and give examples of their content.   | X         | X   | X           | X    | X   | X  |                     |         |
| (09)                |    | Explain that skills are kept primarily in the long-term memory.  | X         | X   | X           | X    | X   | X  |                     |         |
| (10)                |    | Describe amnesia and how it affects memory.  | X         | X   | X           | X    | X   | X  |                     |         |
| (11)                |    | Name the common problems with both the long- and short-term memories and the best methods to try to counteract them.   | X         | X   | X           | X    | X   | X  |                     |         |
| <b>040 03 01 04</b> |    | <b>Response selection</b>  |           |     |             |      |     |    |                     |         |
|                     |    | <b>Learning principles and techniques</b>  |           |     |             |      |     |    |                     |         |
| (01)                |    | Explain and distinguish between the following basic forms of learning:<br>— classic and operant conditioning (behaviouristic approach);<br>— learning by insight (cognitive approach);<br>— learning by imitating (modelling). | X         | X   | X           | X    | X   | X  |                     |         |
| (02)                |    | Recognise pilot-related examples as behaviouristic, cognitive or modelling forms of learning.  | X         | X   | X           | X    | X   | X  |                     |         |
| (03)                |    | State the factors that are necessary for and promote the quality of learning:<br>— intrinsic motivation;<br>— good mental health;<br>— rehearsals for improvement of memory;   | X         | X   | X           | X    | X   | X  |                     |         |

| <b>040 03 02 01</b> |    | <b>Reliability of human behaviour</b>   |           |     |             |      |     |    |                     |         |
| (01)                |    | Name and explain the factors that influence human reliability.  | X         | X   | X           | X    | X   | X  |                     |         |
| <b>040 03 02 02</b> |    | <b>Mental models and situation awareness</b>  |           |     |             |      |     |    |                     |         |
| (01)                |    | Define the term 'situation awareness'.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (02)                |    | List the cues that indicate loss of situation awareness and name the steps to regain it.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (03)                |    | List the factors that influence one's situation awareness both positively and negatively, and stress the importance of situation awareness in the context of flight safety. | X         | X   | X           | X    | X   | X  | X                   |         |
| (04)                |    | Define the term 'mental model' in relation to a surrounding complex situation.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (05)                |    | Describe the advantages/disadvantages of mental models.   | X         | X   | X           | X    | X   | X  | X                   |         |
| (06)                |    | Explain the relationship between personal 'mental models' and the creation of cognitive illusions.  | X         | X   | X           | X    | X   | X  | X                   |         |
| <b>040 03 02 03</b> |    | <b>Theory and model of human error</b>  |           |     |             |      |     |    |                     |         |
| (01)                |    | Explain the concept of the 'error chain'.   | X         | X   | X           | X    | X   | X  | X                   |         |
| (02)                |    | Differentiate between an isolated error and an error chain.   | X         | X   | X           | X    | X   | X  | X                   |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter  |      |     | IR | CB-IR(A)<br>and EIR | Remarks |
|---------------------|----|--|-----------|-----|-------------|------|-----|----|---------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/<br>IR | ATPL | CPL |    |                     |         |
| (03)                |    | Distinguish between the main forms/types of errors (i.e. slips, faults, omissions and violations).   | X         | X   | X           | X    | X   | X  | X                   |         |
| (04)                |    | Discuss the above errors and their relevance in flight.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (05)                |    | Distinguish between an active and a latent error, and give examples.   | X         | X   | X           | X    | X   | X  | X                   |         |
| <b>040 03 02 04</b> |    | <b>Error generation</b>  |           |     |             |      |     |    |                     |         |
| (01)                |    | Distinguish between internal and external factors in error generation.   | X         | X   | X           | X    | X   | X  | X                   |         |
| (02)                |    | Identify possible sources of internal error generation.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (03)                |    | Define and discuss the two errors associated with motor programmes (action slip and environmental capture).  | X         | X   | X           | X    | X   | X  | X                   |         |
| (04)                |    | List the three main sources of external error generation in the flight crew compartment.   | X         | X   | X           | X    | X   | X  | X                   |         |
| (05)                |    | Give examples to illustrate the following factors in external error generation in the flight crew compartment:<br>— ergonomics;<br>— economics;<br>— social environment. | X         | X   | X           | X    | X   | X  | X                   |         |
| (06)                |    | Name the major goals in the design of human-centred human-machine interfaces.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (07)                |    | Define the term 'error tolerance'.   | X         | X   | X           | X    | X   | X  | X                   |         |
| (08)                |    | List and describe the strategies that are used to reduce human error.  | X         | X   | X           | X    | X   | X  | X                   |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter  |      |     | IR | CB-IR(A)<br>and EIR | Remarks |

|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (02)                |    | Define the term ‘self-concept’ and the role it plays in any change of personality.  | X         | X   | X          | X    | X   | X  |                  |         |
| (03)                |    | Explain how a self-concept of underconfidence may lead to an outward show of aggression and self-assertiveness.                                       | X         | X   | X          | X    | X   | X  |                  |         |
|                     |    | <b>Self-discipline</b>  |           |     |            |      |     |    |                  |         |
| (04)                |    | Define ‘self-discipline’ and justify its importance for flight safety.  | X         | X   | X          | X    | X   | X  |                  |         |
| <b>040 03 05 03</b> |    | <b>Identification of hazardous attitudes (error proneness)</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain dangerous attitudes in aviation:<br>— anti-authority;<br>— macho;<br>— impulsivity;<br>— invulnerability;<br>— complacency;<br>— resignation. | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Describe the personality, attitude and behaviour patterns of an ideal crew member.  | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Summarise how a person’s attitude influences their work in the flight crew compartment.   | X         | X   | X          | X    | X   |    |                  |         |
| <b>040 03 06 00</b> |    | <b>Human overload and underload</b>   |           |     |            |      |     |    |                  |         |
| <b>040 03 06 01</b> |    | <b>Arousal</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the term ‘arousal’.   | X         | X   | X          | X    | X   | X  |                  |         |
| (02)                |    | Describe the relationship between arousal and   | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | performance.   |           |     |            |      |     |    |                  |         |
| (03)                |    | Explain the circumstances under which underload may occur and its possible dangers.              | X         | X   | X          | X    | X   | X  |                  |         |
| <b>040 03 06 02</b> |    | <b>Stress</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the term 'stress' and why stress is a natural human reaction.                            | X         | X   | X          | X    | X   | X  |                  |         |
| (02)                |    | State that the physiological response to stress is generated by the 'fight or flight' response.  | X         | X   | X          | X    | X   | X  |                  |         |
| (03)                |    | Describe the function of the autonomic nervous system (ANS) in stress response.                  | X         | X   | X          | X    | X   | X  |                  |         |
| (04)                |    | Explain the relationship between arousal and stress.   | X         | X   | X          | X    | X   | X  |                  |         |
| (05)                |    | State the relationship between stress and performance.   | X         | X   | X          | X    | X   | X  | X                |         |
| (06)                |    | State the basic categories of stressors.   | X         | X   | X          | X    | X   | X  | X                |         |
| (07)                |    | List and discuss the major environmental sources of stress in the flight crew compartment.       | X         | X   | X          | X    | X   | X  | X                |         |
| (08)                |    | Discuss the concept of 'break point' with regard to stress, overload and performance.            | X         | X   | X          | X    | X   | X  | X                |         |
| (09)                |    | Name the principal causes of domestic stress.  | X         | X   | X          | X    | X   | X  |                  |         |
| (10)                |    | State that the stress experienced as a result of particular demands varies among individuals.    | X         | X   | X          | X    | X   | X  |                  |         |
| (11)                |    | Explain the factors that lead to differences in the levels of stress experienced by individuals. | X         | X   | X          | X    | X   | X  | X                |         |
| (12)                |    | List the factors that influence the tolerance of stressors.                                      | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter  |      |     | IR | CB-IR(A)<br>and EIR | Remarks |
|--------------------|----|--|-----------|-----|-------------|------|-----|----|---------------------|---------|
|                    |    |  | ATPL      | CPL | ATPL/<br>IR | ATPL | CPL |    |                     |         |
| (13)               |    | State that stress is a result of perceived demands and perceived ability.  | X         | X   | X           | X    | X   | X  |                     |         |
| (14)               |    | Explain the relationship between stress and anxiety.   | X         | X   | X           | X    | X   | X  | X                   |         |
| (15)               |    | Describe the effects of anxiety on human performance.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (16)               |    | State the general effect of acute stress on people.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (17)               |    | Describe the relationship between stress, arousal and vigilance.   | X         | X   | X           | X    | X   | X  |                     |         |
| (18)               |    | State the general effect of chronic stress and the biological reaction by means of the three stages of the general adaptation syndrome (Selye): alarm, resistance, and exhaustion. | X         | X   | X           | X    | X   | X  |                     |         |
| (19)               |    | Explain the differences between psychological, psychosomatic and somatic stress reactions.   | X         | X   | X           | X    | X   | X  |                     |         |
| (20)               |    | Name the typical common physiological and psychological symptoms of human overload.  | X         | X   | X           | X    | X   | X  |                     |         |
| (21)               |    | Describe the effects of stress on human behaviour.   | X         | X   | X           | X    | X   | X  |                     |         |
| (22)               |    | Explain how stress is cumulative and how stress from one situation can be transferred to a different situation.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (23)               |    | Explain how successful completion of a stressful task will reduce the amount of stress experienced when a similar situation arises in the future.                                  | X         | X   | X           | X    | X   | X  | X                   |         |
| (24)               |    | Describe the effect of human underload/overload on effectiveness in the flight crew compartment.   | X         | X   | X           | X    | X   | X  | X                   |         |
| (25)               |    | List sources and symptoms of human underload.  | X         | X   | X           | X    | X   | X  | X                   |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter  |      |     | IR | CB-IR(A)<br>and EIR | Remarks |
|---------------------|----|--|-----------|-----|-------------|------|-----|----|---------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/<br>IR | ATPL | CPL |    |                     |         |
| <b>040 03 06 03</b> |    | <b><i>Intentionally left blank</i></b>   |           |     |             |      |     |    |                     |         |
| <b>040 03 06 04</b> |    | <b><i>Intentionally left blank</i></b>   |           |     |             |      |     |    |                     |         |
| <b>040 03 06 05</b> |    | <b><i>Fatigue and stress management</i></b>  |           |     |             |      |     |    |                     |         |
| (01)                |    | Explain the term ‘fatigue’ and differentiate between the two types of fatigue (short-term and chronic fatigue).  | X         | X   | X           | X    | X   | X  |                     |         |
| (02)                |    | Name the causes of short-term and chronic fatigue.   | X         | X   | X           | X    | X   | X  |                     |         |
| (03)                |    | Identify the symptoms and describe the effects of fatigue.   | X         | X   | X           | X    | X   | X  |                     |         |
| (04)                |    | List the strategies that prevent or delay the onset of fatigue and hypovigilance.  | X         | X   | X           | X    | X   | X  |                     |         |
| (05)                |    | List and describe strategies for coping with stress factors and stress reactions.  | X         | X   | X           | X    | X   | X  |                     |         |
| (06)                |    | Distinguish between short-term and long-term methods of stress management.   | X         | X   | X           | X    | X   | X  |                     |         |
| (07)                |    | Give examples of short-term methods of stress management.  | X         | X   | X           | X    | X   | X  |                     |         |
| (08)                |    | Give examples of long-term methods of coping with stress.  | X         | X   | X           | X    | X   | X  |                     |         |
| (09)                |    | Describe the fatigue risk management system (FRMS) as follows: a data-driven means of continuously monitoring and managing fatigue-related safety risks, based upon scientific principles and knowledge as well as operational experience that aims to ensure relevant personnel are | X         | X   | X           | X    | X   | X  |                     |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | performing at adequate levels of alertness.  |           |     |            |      |     |    |                  |         |
| <b>040 03 07 00</b> |    | <b>Advanced cockpit automation</b>   |           |     |            |      |     |    |                  |         |
| <b>040 03 07 01</b> |    | <b>Advantages and disadvantages</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Compare the two basic concepts of automation:<br>— as per Boeing, where the pilot remains the last operator;<br>— and as per Airbus, where automated systems can correct erroneous pilot action.   | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                |    | Explain the fundamental restrictions of autoflight systems to be lack of creativity in unknown situations, and lack of personal motivation with regard to safety.  | X         | X   | X          | X    | X   | X  | X                |         |
| (03)                |    | List the principal strengths and weaknesses of pilot versus autopilot systems to be creativity, decision-making, prioritisation of tasks, safety attitude versus precision, reliability.   | X         | X   | X          | X    | X   | X  | X                |         |
| (04)                |    | Explain the ‘ironies of automation’: designers’ errors due to wrong interpretation of the data, leaving tasks to the pilot that are too complex to automate, loss of manual and cognitive skills of the pilot.<br>State the necessity for regular training flights as one possible countermeasure. | X         | X   | X          | X    | X   | X  | X                |         |
| (05)                |    | Describe methods to overcome the drawbacks of autoflight systems to be loss of manual flying capabilities, additional workload through programming, risk of slips during programming, and hypovigilance during cruise.   | X         | X   | X          | X    | X   | X  | X                |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter  |      |     | IR | CB-IR(A)<br>and EIR | Remarks |
|---------------------|----|---|-----------|-----|-------------|------|-----|----|---------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/<br>IR | ATPL | CPL |    |                     |         |
| <b>040 03 07 02</b> |    | <b>Automation complacency</b>   |           |     |             |      |     |    |                     |         |
| (01)                |    | State the main weaknesses in the monitoring of automatic systems to be hypovigilance during flight, and loss of flying skills.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (02)                |    | Explain some basic flight crew errors and terms that arise with the introduction of automation:<br>— passive monitoring;<br>— blinkered concentration;<br>— confusion;<br>— mode awareness.                               | X         | X   | X           | X    | X   | X  | X                   |         |
| (03)                |    | Explain how the method of call-outs counteracts ineffective monitoring of automatic systems.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (04)                |    | Define ‘complacency’.   | X         | X   | X           | X    | X   | X  | X                   |         |
| <b>040 03 07 03</b> |    | <b>Working concepts</b>   |           |     |             |      |     |    |                     |         |
| (01)                |    | Explain that the potential disadvantages of automation on crew communication are loss of awareness of input errors, flight modes, failure detection, failure comprehension, status of the aircraft and aircraft position. | X         |     | X           | X    |     |    |                     |         |
| (02)                |    | Explain how the negative effects of automation on pilots may be alleviated by degrading to a lower level of automation to recover comprehension of the flight status from VNAV/LNAV to ALT/HDG or even to manual flying.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (03)                |    | Interpret the role of automation with respect to flight safety regarding the basic principle of the use of  | X         | X   | X           | X    | X   | X  | X                   |         |

**SUBJECT 050 — METEOROLOGY**

The operation of an aircraft is affected by the weather conditions within the atmosphere. The pilot should prove that they fulfil the following objectives in order to complete a flight safely in given meteorological conditions.

(1) Training aims

(i) Knowledge. After completion of the training, the pilot should be able to:

- understand the physical processes in the atmosphere;
- interpret the actual and forecast weather conditions in the atmosphere; and
- demonstrate understanding of the meteorological hazards and their effects on aircraft.

(ii) Skills. After completion of the training, the pilot should be able to:

- collect all the weather information which may affect a given flight;
- analyse and evaluate available weather information before flight as well as that collected in flight; and
- resolve any problems presented by the given weather conditions.

| <b>050 09 09 00</b> |    | <b>Visibility-reducing phenomena</b>   |           |     |            |      |     |    |                  |         |
| <b>050 09 09 01</b> |    | <b><i>Reduction of visibility caused by precipitation and obscurations</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the reduction of visibility caused by precipitation: drizzle, rain, snow.   | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                |    | Describe the reduction of visibility caused by obscurations:<br>— fog, mist, haze, smoke, volcanic ash.  | X         | X   | X          | X    | X   | X  | X                |         |
| (03)                |    | Describe the reduction of visibility caused by obscurations:<br>— sand (SA), dust (DU).  | X         |     | X          | X    |     |    |                  |         |
| (04)                |    | Describe the differences between ground and flight visibility, and slant and vertical visibility when an aircraft is above or within a layer of haze or fog. | X         | X   | X          | X    | X   | X  | X                |         |
| <b>050 09 09 02</b> |    | <b><i>Reduction of visibility caused by other phenomena</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the reduction of visibility caused by low drifting and blowing snow.  | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                |    | Describe the reduction of visibility caused by low drifting and blowing dust and sand.   | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Describe the reduction of visibility caused by dust storm (DS) and sandstorm (SS).   | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | Describe the reduction of visibility caused by icing (windshield).   | X         | X   | X          | X    | X   | X  | X                |         |
| (05)                |    | Describe the reduction of visibility caused by the position of the sun relative to the visual direction.   | X         | X   | X          | X    | X   | X  | X                |         |
| (06)                |    | Describe the reduction of visibility caused by the reflection of the sun's rays from the top of the layers of haze, fog and                                  | X         | X   | X          | X    | X   | X  | X                |         |

| <b>050 10 01 01</b> |    | <b>Surface observations</b>  |           |     |             |      |     |    |                     |         |
| (01)                |    | Define ‘gusts’, as given in METARs.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (02)                |    | Distinguish wind given in METARs and wind given by the control tower for take-off and landing. | X         | X   | X           | X    | X   | X  | X                   |         |
| (03)                |    | Define ‘visibility’.   | X         | X   | X           | X    | X   | X  | X                   |         |
| (04)                |    | Describe the meteorological measurement of visibility.   | X         | X   | X           | X    | X   | X  | X                   |         |
| (05)                |    | Define ‘prevailing visibility’.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (06)                |    | Define ‘ground visibility’.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (07)                |    | List the units used for visibility (m, km, statute mile).                                      | X         | X   | X           | X    | X   | X  | X                   |         |
| (08)                |    | Define ‘runway visual range’.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (09)                |    | Describe the meteorological measurement of runway visual range.                                | X         | X   | X           | X    | X   | X  | X                   |         |
| (10)                |    | Indicate where the transmissometers/forward-scatter meters are placed on the aerodrome.        | X         | X   | X           | X    | X   | X  | X                   |         |
| (11)                |    | List the units used for runway visual range (m, ft).   | X         | X   | X           | X    | X   | X  | X                   |         |
| (12)                |    | List the different possibilities to transmit information to pilots about runway visual range.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (13)                |    | Compare ground visibility, prevailing visibility, and runway visual range.                     | X         | X   | X           | X    | X   | X  | X                   |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter  |      |     | IR | CB-IR(A)<br>and EIR | Remarks |
|---------------------|----|---|-----------|-----|-------------|------|-----|----|---------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/<br>IR | ATPL | CPL |    |                     |         |
| (14)                |    | Indicate the means of observation of present weather.   | X         | X   | X           | X    | X   | X  |                     |         |
| (15)                |    | Indicate the means of observing clouds for the purpose of recording: type, amount, height of base (ceilometers), and top. | X         | X   | X           | X    | X   | X  |                     |         |
| (16)                |    | State the clouds which are indicated in METAR, TAF and SIGMET.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (17)                |    | Define 'oktas'.   | X         | X   | X           | X    | X   | X  | X                   |         |
| (18)                |    | Define 'cloud base'.  | X         | X   | X           | X    | X   | X  | X                   |         |
| (19)                |    | Define 'ceiling'.   | X         | X   | X           | X    | X   | X  | X                   |         |
| (20)                |    | Name the unit and the reference level used for information about cloud base (ft).   | X         | X   | X           | X    | X   | X  | X                   |         |
| (21)                |    | Define 'vertical visibility'.   | X         | X   | X           | X    | X   | X  | X                   |         |
| (22)                |    | Explain briefly how and when vertical visibility is measured.   | X         | X   | X           | X    | X   | X  | X                   |         |
| (23)                |    | Name the units used for vertical visibility (ft, m).  | X         | X   | X           | X    | X   | X  | X                   |         |
| (24)                |    | Indicate the means of observation of air temperature (thermometer).   | X         | X   | X           | X    | X   | X  | X                   |         |
| (25)                |    | Name the units of relative humidity (%) and dew-point temperature (Celsius, Fahrenheit).                                  | X         | X   | X           | X    | X   | X  |                     |         |
| <b>050 10 01 02</b> |    | <b>Radiosonde observations</b>  |           |     |             |      |     |    |                     |         |
| (01)                |    | Describe the principle of radiosondes.  | X         | X   | X           | X    | X   | X  |                     |         |
| (02)                | X  | Describe and interpret the sounding by radiosonde given on a simplified temperature–pressure (T–P) diagram.               | X         | X   | X           | X    | X   | X  |                     |         |

**AMC1 FCL.310; FCL.515(b); FCL.615(b)**

**‘Theoretical knowledge examinations’**

**SUBJECT 061 — NAVIGATION — GENERAL NAVIGATION****Mental dead reckoning (MDR)**

Where the term 'mental dead reckoning' (MDR) is used within a Learning Objective (LO), the applicable technique which will be used for the European Central Question Bank (ECQB) questions is based on the methods shown below.

Examination questions will state that an MDR technique is required to produce the solution. If other techniques (e.g. trigonometry) are used to determine the answer, then the determined answer may be incorrect.

**MDR crosswind component (XWC)**

The XWC can be calculated using a 'clock code rule', where each 15° of wind angle is represented by 1/4 of an hour — meaning 1/4 the wind strength.

The XWC can be estimated using the values from the table below:

| Wind angle      | 15° | 30° | 45° | 60° |
|-----------------|-----|-----|-----|-----|
| % of wind speed | 25  | 50  | 75  | 100 |

(Wind angle (WA) is the angle between the wind vector and the track/runway direction to the nearest 10°)

**Example:**

RWY 04 and surface wind from tower is 085°/20 kt. What is the XWC?

$$\begin{aligned}
 \text{WA} &= 45^\circ \\
 \text{XWC} &= (0.75) \times 20 \\
 &= \underline{15 \text{ kt}}
 \end{aligned}$$

**MDR headwind component (HWC)/tailwind component (TWC)**

The H/TWC can be estimated using the values from the following table:

| 90° – wind angle | 10° | 20° | 30° | 40° | 50° | 60° |
|------------------|-----|-----|-----|-----|-----|-----|
| % of wind speed  | 0.2 | 0.3 | 0.5 | 0.6 | 0.8 | 0.9 |

To assist recall, an aid is shown below:

| 90° – wind angle | 10° | 20° | 30° | 40° | 50° | 60° |
|------------------|-----|-----|-----|-----|-----|-----|
| Aid              | 1   | 1   | 2   | 2   | 3   | 3   |
| % of wind speed  | 0.2 | 0.3 | 0.5 | 0.6 | 0.8 | 0.9 |

**Example:**

RWY 04 and surface wind from tower is 080°/20 kt. What is the HWC?

$$WA = 40^\circ$$

$$90^\circ - WA = 50^\circ$$

$$HWC = (0.8) \times 20$$

$$= \underline{16 \text{ kt}}$$

**MDR triangle of velocities (TOV)**

Heading is determined by calculating the XWC as previously described, then applying the 1:60 rule to the TOV as follows:

This MDR technique works for the relatively small WCAs which are typical for medium to high TAS values (the ground speed (GS) therefore can be assumed to be equal to the TAS for application of the 1:60 rule).

**Example 1:**Planned track =  $070^{\circ}$  (T)

TAS = 400 kt

WV =  $100^{\circ}$  (T)/40 ktWA =  $30^{\circ}$  $XWC = (0.5) \times 40$ 

= 20 kt

Heading required =  $073^{\circ}$  (T)

GS is determined by using the headwind/tailwind example previously explained.

WA =  $30^{\circ}$  $90^{\circ} - 30^{\circ} = 60^{\circ}$ HWC =  $(0.9) \times 40$ 

= 36 kt

GS =  $400 - 36 = \underline{364}$  kt

**Example 2:**Planned track =  $327^\circ$  (T)

TAS = 240 kt

WV =  $210^\circ$  (T)/70 ktWA =  $60^\circ$ XWC =  $(0.9) \times 7$ 

= 63 kt

WCA =  $16^\circ$ Heading required =  $311^\circ$  (T)

GS is determined by using the headwind/tailwind example previously explained.

WA =  $60^\circ$  $90^\circ - 60^\circ = 30^\circ$ TWC =  $(0.5) \times 70$ 

= 35 kt

GS =  $240 + 35 = \underline{275 \text{ kt}}$

**VFR navigation (061 02 00 00)**

The techniques referred to within the LOs are based on the methods as described below.

**Mental dead reckoning (MDR) off-track corrections****Based on the 1:60 rule**

1 NM of cross-track error (XTE) for every 60 NM along track from waypoint =  $1^\circ$  of track error angle (TKE).

1 NM of XTE for every 60 NM along track to waypoint =  $1^\circ$  of closing angle (CA).

Change of heading required to regain track in same distance as covered from waypoint to position off track  
=  $2 \times \text{TKE}$ .

Change of heading required to reach next waypoint from position off track =  $\text{TKE} + \text{CA}$ .

**Example 1:**

Planned heading is  $162^\circ$  (T), and after 40 NM along track the aircraft position is fixed 2 NM right of planned track. What heading is required to regain track in approximately the same time as has taken to the fix position?

$$\text{TKE} = 3^\circ$$

$$\text{Heading required} = \underline{156^\circ \text{ (T)}}$$

**Example 2:**

Planned heading is  $317^\circ$  (T), and after 22 NM along track the aircraft position is fixed 3.5 NM left of planned track. What heading is required to fly direct to the next waypoint which is another 45 NM down track?

$$\text{TKE} = 10^\circ, \text{CA} = 5^\circ$$

$$\text{Heading required} = \underline{332^\circ \text{ (T)}}$$

**Mental dead reckoning (MDR) estimated time of arrival (ETA) calculations**

**Round the GS to the nearest NM/min, and then make the same percentage adjustment for the distance.**

**Example:**

Distance to go = 42 NM

GS = 132 kt

GS rounded to 120 kt = 2 NM/min

Percentage change = 10 %

Distance = 42 – 10 % = 38 NM

Time = 38 / 2 = 19 min

**Unsure-of-position procedure**

As soon as the position of the aircraft is in doubt:

1. note the time;
2. communicate if in contact with an air traffic control (ATC) unit to request assistance;
3. consider using any radio-navigation aids that may be available to give position information (do not become distracted from flying the aircraft safely);
4. if short of fuel or near controlled airspace, and not in contact with ATC, set 121.5 MHz and make a PAN call;
5. if that is not necessary, check the directional indicator (DI) and compass are still synchronised and continue to fly straight and level and on route plan heading;
6. estimate the distance travelled since the last known position;
7. compare the ground with your estimated position on the map (look at the terrain for hills and valleys or line features such as a motorway, railway, river or coastline);
8. once the position has been re-established, keep checking the heading (and look out for other aircraft) and continue the flight by updating the estimated position regularly while looking for unique features such as a lake, wood, built-up area, mast, or a combination of roads, rivers and railways.

### **Procedure when lost**

If the unsure-of-position procedure does not resolve the problem:

1. inform someone — call first on the working frequency and state the word 'LOST';
2. if there is no contact on that frequency or there is no frequency selected, change to 121.5 MHz and make a PAN call; select 7700 with ALT on the transponder if fitted.

In all cases: maintain visual meteorological conditions (VMC), note the fuel state, and try to identify an area suitable for a precautionary landing.

Consider the 'HELP ME' mnemonic:

- H. High ground/obstructions — are there any nearby?
- E. Entering controlled airspace — is that a possibility?
- L. Limited experience, low time or student pilot — let someone know.
- P. PAN call in good time — don't leave it too late.
- M. MET conditions — is the weather deteriorating?
- E. Endurance — is fuel getting low?

| <b>061 05 02 01</b> |    | <b><i>Standard time and daylight saving time</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain and apply the concept of standard time and daylight saving time, and perform standard time and daylight saving time calculations. | X         | X   | X          | X    | X   |    |                  |         |
| <b>061 05 02 02</b> |    | <b><i>International Date Line</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | State the changes when crossing the International Date Line.  | X         | X   | X          | X    | X   |    |                  |         |
| <b>061 05 03 00</b> |    | <b>Sunrise and sunset</b>   |           |     |            |      |     |    |                  |         |
| <b>061 05 03 01</b> |    | <b><i>Sunrise and sunset times</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Define sunrise, sunset, and civil twilight, and extract times from a suitable source (e.g. an almanac).                                   | X         | X   | X          | X    | X   |    |                  |         |
| (02)                |    | Explain the changes to sunrise, sunset, and civil twilight times with date, latitude and altitude.  | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Explain at which time of the year the duration of daylight changes at the highest rate.   | X         | X   | X          | X    | X   |    |                  |         |

## SUBJECT 062 — NAVIGATION — RADIO NAVIGATION

| Syllabus reference | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| 060 00 00 00       |    | NAVIGATION  |           |     |            |      |     |    |                  |         |
| 062 00 00 00       |    | RADIO NAVIGATION  |           |     |            |      |     |    |                  |         |
| 062 01 00 00       |    | BASIC RADIO PROPAGATION THEORY  |           |     |            |      |     |    |                  |         |
| 062 01 01 00       |    | Basic principles  |           |     |            |      |     |    |                  |         |
| 062 01 01 01       |    | <i>Electromagnetic waves</i>  |           |     |            |      |     |    |                  |         |
| (01)               | X  | State that radio waves travel at the speed of light, being approximately 300 000 km/s.  | X         | X   | X          | X    | X   | X  |                  |         |
| (02)               | X  | Define a 'cycle': a complete series of values of a periodical process.  | X         | X   | X          | X    | X   | X  |                  |         |
| 062 01 01 02       |    | <i>Frequency, wavelength, amplitude, phase angle</i>  |           |     |            |      |     |    |                  |         |
| (01)               | X  | Define 'frequency': the number of cycles occurring in 1 second expressed in Hertz (Hz).   | X         | X   | X          | X    | X   | X  |                  |         |
| (02)               | X  | Define 'wavelength': the physical distance travelled by a radio wave during one cycle of transmission.                          | X         | X   | X          | X    | X   | X  |                  |         |
| (03)               | X  | Define 'amplitude': the maximum deflection in an oscillation or wave.   | X         | X   | X          | X    | X   | X  |                  |         |
| (04)               | X  | State that the relationship between wavelength and frequency is: wavelength ( $\lambda$ ) = speed of light (c) / frequency (f). | X         | X   | X          | X    | X   | X  |                  |         |
| (05)               | X  | Define 'phase angle': the fraction of one wavelength expressed in degrees from 000° to 360°.                                    | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (06)                | X  | Define 'phase angle difference/shift': the angular difference between the corresponding points of two cycles of equal wavelength, which is measurable in degrees (°).  | X         | X   | X          | X    | X   | X  |                  |         |
| <b>062 01 01 03</b> |    | <b>Frequency bands, sidebands, single sideband</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | List the bands of the frequency spectrum for electromagnetic waves:<br>— very low frequency (VLF): 3–30 kHz;<br>— low frequency (LF): 30–300 kHz;<br>— medium frequency (MF): 300–3 000 kHz;<br>— high frequency (HF): 3–30 MHz;<br>— very high frequency (VHF): 30–300 MHz;<br>— ultra-high frequency (UHF): 300–3 000 MHz;<br>— super high frequency (SHF): 3–30 GHz;<br>— extremely high frequency (EHF): 30–300 GHz. | X         | X   | X          | X    | X   | X  |                  |         |
| (02)                |    | State that when a carrier wave is modulated, the resultant radiation consists of the carrier frequency plus additional upper and lower sidebands.  | X         | X   | X          | X    | X   | X  |                  |         |
| (03)                |    | State that HF meteorological information for aircraft in flight (VOLMET) and HF two-way communication use a single sideband.   | X         | X   | X          | X    | X   | X  |                  |         |
| (04)                |    | State that the following abbreviations (classifications according to International Telecommunication Union (ITU) regulations) are used for aviation applications:<br>— NON: carrier without modulation as used by non-directional radio beacons (NDBs);<br>— A1A: carrier with keyed Morse code modulation as  | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | used by NDBs;<br>— A2A: carrier with amplitude modulated Morse code as used by NDBs;<br>— A3E: carrier with amplitude modulated speech used for communication (VHF-COM). |           |     |            |      |     |    |                  |         |
| <b>062 01 01 04</b> |    | <b>Pulse characteristics</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Define the following terms that are associated with a pulse string:<br>— pulse length;<br>— pulse power;<br>— continuous power.  | X         | X   | X          | X    | X   | X  |                  |         |
| <b>062 01 01 05</b> |    | <b>Carrier, modulation</b>   |           |     |            |      |     |    |                  |         |
| (01)                | X  | Define 'carrier wave': the radio wave acting as the carrier or transporter.  | X         | X   | X          | X    | X   | X  |                  |         |
| (02)                | X  | Define 'modulation': the technical term for the process of impressing and transporting information by radio waves.   | X         | X   | X          | X    | X   | X  |                  |         |
| <b>062 01 01 06</b> |    | <b>Kinds of modulation (amplitude, frequency, pulse, phase)</b>  |           |     |            |      |     |    |                  |         |
| (01)                | X  | Define 'amplitude modulation': the information that is impressed onto the carrier wave by altering the amplitude of the carrier.   | X         | X   | X          | X    | X   | X  |                  |         |
| (02)                | X  | Define 'frequency modulation': the information that is impressed onto the carrier wave by altering the frequency of the carrier.   | X         | X   | X          | X    | X   | X  |                  |         |
| (03)                | X  | Describe 'pulse modulation': a modulation form used in radar by transmitting short pulses followed by larger   | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | interruptions.  |           |     |            |      |     |    |                  |         |
| (04)                | X  | Describe ‘phase modulation’: a modulation form used in GPS where the phase of the carrier wave is reversed.   | X         | X   | X          | X    | X   | X  |                  |         |
| <b>062 01 02 00</b> |    | <b>Antennas</b>   |           |     |            |      |     |    |                  |         |
| <b>062 01 02 01</b> |    | <b>Characteristics</b>  |           |     |            |      |     |    |                  |         |
| (01)                | X  | Define ‘antenna’: an antenna or aerial is an electrical device which converts electric power into radio waves, and vice versa.  | X         | X   | X          | X    | X   | X  |                  |         |
| (02)                | X  | State that the simplest type of antenna is a dipole, which is a wire of length equal to one half of the wavelength.   | X         | X   | X          | X    | X   | X  |                  |         |
| (03)                | X  | State that an electromagnetic wave always consists of an oscillating electric (E) and an oscillating magnetic (H) field which propagates at the speed of light.                                   | X         | X   | X          | X    | X   | X  |                  |         |
| (04)                | X  | State that the E and H fields are perpendicular to each other. The oscillations are perpendicular to the propagation direction and are in-phase.  | X         | X   | X          | X    | X   | X  |                  |         |
| <b>062 01 02 02</b> |    | <b>Polarisation</b>   |           |     |            |      |     |    |                  |         |
| (01)                | X  | State that the polarisation of an electromagnetic wave describes the orientation of the plane of oscillation of the electrical component of the wave with regard to its direction of propagation. | X         | X   | X          | X    | X   | X  |                  |         |
| <b>062 01 02 03</b> |    | <b>Types of antennas</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Name the common different types of directional antennas:<br>— loop antenna used in old automatic direction-   | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | finding (ADF) receivers;<br>— parabolic antenna used in weather radars;<br>— slotted planar array used in more modern weather radars.  |           |     |            |      |     |    |                  |         |
| (02)                |    | Explain ‘antenna shadowing’.   | X         | X   | X          | X    | X   |    |                  |         |
| (03)                |    | Explain the importance of antenna placement on aircraft.   | X         | X   | X          | X    | X   |    |                  |         |
| <b>062 01 03 00</b> |    | <b>Wave propagation</b>  |           |     |            |      |     |    |                  |         |
| <b>062 01 03 01</b> |    | <b>Structure of the ionosphere and its effect on radio waves</b>   |           |     |            |      |     |    |                  |         |
| (01)                | X  | State that the ionosphere is the ionised component of the Earth’s upper atmosphere from approximately 60 to 400 km above the surface, which is vertically structured in three regions or layers. | X         | X   | X          | X    | X   | X  |                  |         |
| (02)                | X  | State that the layers of the ionosphere are named D, E and F layers, and their depth varies with time.   | X         | X   | X          | X    | X   | X  |                  |         |
| (03)                | X  | State that electromagnetic waves refracted from the E and F layers of the ionosphere are called sky waves.   | X         | X   | X          | X    | X   | X  |                  |         |
| (04)                | X  | Explain how the different layers of the ionosphere influence wave propagation.   | X         | X   | X          | X    | X   | X  |                  |         |
| <b>062 01 03 02</b> |    | <b>Ground waves</b>  |           |     |            |      |     |    |                  |         |
| (01)                | X  | Define ‘ground or surface waves’: the electromagnetic waves travelling along the surface of the Earth.   | X         | X   | X          | X    | X   | X  |                  |         |
| <b>062 01 03 03</b> |    | <b>Space waves</b>   |           |     |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (01)                | X  | Define 'space waves': the electromagnetic waves travelling through the air directly from the transmitter to the receiver.  | X         | X   | X          | X    | X   | X  |                  |         |
| <b>062 01 03 04</b> |    | <b>Propagation with the frequency bands</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State that radio waves in VHF, UHF, SHF and EHF propagate as space waves.  | X         | X   | X          | X    | X   | X  |                  |         |
| (02)                |    | State that radio waves in LF, MF and HF propagate as surface/ground waves and sky waves.   | X         | X   | X          | X    | X   | X  |                  |         |
| <b>062 01 03 05</b> |    | <b>Doppler principle</b>   |           |     |            |      |     |    |                  |         |
| (01)                | X  | State that the Doppler effect is the phenomenon where the frequency of a wave will increase or decrease if there is relative motion between the transmitter and the receiver.                      | X         | X   | X          | X    | X   | X  |                  |         |
| <b>062 01 03 06</b> |    | <b>Factors affecting propagation</b>   |           |     |            |      |     |    |                  |         |
| (01)                | X  | Define 'skip distance': the distance between the transmitter and the point on the surface of the Earth where the first sky wave return arrives.  | X         | X   | X          | X    | X   | X  |                  |         |
| (02)                |    | State that skip zone/dead space is the distance between the limit of the surface wave and the sky wave.  | X         | X   | X          | X    | X   | X  |                  |         |
| (03)                |    | Describe 'fading': when a receiver picks up two signals with the same frequency, and the signals will interfere with each other causing changes in the resultant signal strength and polarisation. | X         | X   | X          | X    | X   | X  |                  |         |
| (04)                |    | State that radio waves in the VHF band and above are limited in range as they are not reflected by the ionosphere and do not have a surface wave.  | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (05)                | X  | Describe the physical phenomena 'reflection', 'refraction', 'diffraction', 'absorption' and 'interference'.   | X         | X   | X          | X    | X   | X  |                  |         |
| (06)                |    | State that multipath is when the signal arrives at the receiver via more than one path (the signal being reflected from surfaces near the receiver).            | X         | X   | X          | X    | X   | X  |                  |         |
| <b>062 02 00 00</b> |    | <b>RADIO AIDS</b>   |           |     |            |      |     |    |                  |         |
| <b>062 02 01 00</b> |    | <b>Ground direction finding (DF)</b>  |           |     |            |      |     |    |                  |         |
| <b>062 02 01 01</b> |    | <b>Principles</b>   |           |     |            |      |     |    |                  |         |
| (01)                | X  | Describe the use of a ground DF.  | X         | X   | X          | X    | X   | X  |                  |         |
| (02)                |    | Explain the limitation of range because of the path of the VHF signal.  | X         | X   | X          | X    | X   | X  |                  |         |
| <b>062 02 01 02</b> |    | <b>Presentation and interpretation</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Define the term 'QDM': the magnetic bearing to the station.   | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                |    | Define the term 'QDR': the magnetic bearing from the station.   | X         | X   | X          | X    | X   | X  | X                |         |
| (03)                |    | Explain that by using more than one ground station, the position of an aircraft can be determined and transmitted to the pilot.                                 | X         | X   | X          | X    | X   | X  |                  |         |
| <b>062 02 01 03</b> |    | <b>Coverage and range</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Use the formula:<br>$1.23 \times \sqrt{\text{transmitter height in feet}} + 1.23 \times \sqrt{\text{receiver height in feet}}$<br>to calculate the range in NM. | X         | X   | X          | X    | X   | X  | X                |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| <b>062 02 01 04</b> |    | <b>Errors and accuracy</b>  |           |     |            |      |     |    |                  |         |
| (01)                | X  | Explain why synchronous transmissions will cause errors.  | X         | X   | X          | X    | X   | X  |                  |         |
| (02)                | X  | Describe the effect of ‘multipath signals’.   | X         | X   | X          | X    | X   | X  |                  |         |
| (03)                |    | Explain that VDF information is divided into the following classes according to ICAO Annex 10:<br>— Class A: accurate to a range within $\pm 2^\circ$ ;<br>— Class B: accurate to a range within $\pm 5^\circ$ ;<br>— Class C: accurate to a range within $\pm 10^\circ$ ;<br>— Class D: accurate to less than Class C. | X         | X   | X          | X    | X   | X  |                  |         |
| <b>062 02 02 00</b> |    | <b>Non-directional radio beacon (NDB)/automatic direction finding (ADF)</b>   |           |     |            |      |     |    |                  |         |
| <b>062 02 02 01</b> |    | <b>Principles</b>   |           |     |            |      |     |    |                  |         |
| (01)                | X  | Define the acronym ‘NDB’: non-directional radio beacon.   | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                | X  | Define the acronym ‘ADF’: automatic direction-finding equipment.  | X         | X   | X          | X    | X   | X  | X                |         |
| (03)                | X  | State that the NDB is the ground part of the system.  | X         | X   | X          | X    | X   | X  | X                |         |
| (04)                | X  | State that the ADF is the airborne part of the system.  | X         | X   | X          | X    | X   | X  | X                |         |
| (05)                |    | State that the NDB operates in the LF and MF frequency bands.   | X         | X   | X          | X    | X   | X  | X                |         |
| (06)                |    | State that the frequency band assigned to aeronautical NDBs according to ICAO Annex 10 is 190–1 750 kHz.  | X         | X   | X          | X    | X   | X  | X                |         |
| (07)                |    | Define a ‘locator beacon’: an LF/MF NDB used as an aid to final approach usually with a range of 10–25 NM.  | X         | X   | X          | X    | X   | X  | X                |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (08)                | X  | State that certain commercial radio stations transmit within the frequency band of the NDB.  | X         | X   | X          | X    | X   | X  | X                |         |
| (09)                | X  | State that according to ICAO Annex 10, an NDB station has an automatic ground monitoring system.   | X         | X   | X          | X    | X   | X  | X                |         |
| (10)                |    | Describe the use of NDBs for navigation.   | X         | X   | X          | X    | X   | X  | X                |         |
| (11)                |    | Describe the procedure to identify an NDB station.   | X         | X   | X          | X    | X   | X  | X                |         |
| (12)                | X  | Interpret the term 'cone of confusion' in respect of an NDB.   | X         | X   | X          | X    | X   | X  | X                |         |
| (13)                | X  | State that an NDB station emits a N0N/A1A or a N0N/A2A signal.   | X         | X   | X          | X    | X   | X  | X                |         |
| (14)                | X  | State the function of the beat frequency oscillator (BFO).   | X         | X   | X          | X    | X   | X  | X                |         |
| (15)                | X  | State that in order to identify a N0N/A1A NDB, the BFO circuit of the receiver has to be activated.  | X         | X   | X          | X    | X   | X  | X                |         |
| (16)                | X  | State that on modern aircraft, the BFO is activated automatically.   | X         | X   | X          | X    | X   | X  | X                |         |
| <b>062 02 02 02</b> |    | <b>Presentation and interpretation</b>   |           |     |            |      |     |    |                  |         |
| (01)                | X  | Name the types of indicators commonly in use:<br>— electronic display;<br>— radio magnetic indicator (RMI);<br>— fixed-card ADF (radio compass);<br>— moving-card ADF. | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                |    | Interpret the indications given on RMI, fixed-card and moving-card ADF displays.   | X         | X   | X          | X    | X   | X  | X                |         |
| (03)                |    | Given a display, interpret the relevant ADF information.   | X         | X   | X          | X    | X   | X  | X                |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (04)                |    | Calculate the true bearing from the compass heading and relative bearing.  | X         | X   | X          | X    | X   | X  | X                |         |
| (05)                |    | Convert the compass bearing into magnetic bearing and true bearing.  | X         | X   | X          | X    | X   | X  | X                |         |
| (06)                |    | Describe how to fly the following in-flight ADF procedures according to ICAO Doc 8168 Volume 1:<br>— homing and tracking, and explain the influence of wind;<br>— interceptions;<br>— procedural turns;<br>— holding patterns. | X         | X   | X          | X    | X   | X  | X                |         |
| <b>062 02 02 03</b> |    | <b>Coverage and range</b>  |           |     |            |      |     |    |                  |         |
| (01)                | X  | State that the power of the transmitter limits the range of an NDB.  | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                |    | Explain the relationship between power and range.  | X         | X   | X          | X    | X   | X  | X                |         |
| (03)                | X  | Describe the propagation path of NDB radio waves with respect to the ionosphere and the Earth's surface.   | X         | X   | X          | X    | X   | X  | X                |         |
| (04)                |    | Explain that the interference between sky waves and ground waves leads to 'fading'.  | X         | X   | X          | X    | X   | X  | X                |         |
| (05)                |    | Define that the accuracy the pilot has to fly the required bearing in order to be considered established during approach, according to ICAO Doc 8168, has to be within $\pm 5^\circ$ .   | X         | X   | X          | X    | X   | X  | X                |         |
| (06)                |    | State that there is no warning indication of NDB failure.  | X         | X   | X          | X    | X   | X  | X                |         |
| <b>062 02 02 04</b> |    | <b>Errors and accuracy</b>   |           |     |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (01)                | X  | Explain 'coastal refraction': as a radio wave travelling over land crosses the coast, the wave speeds up over water and the wave front bends.  | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                | X  | Define 'night/twilight effect': the influence of sky waves and ground waves arriving at the ADF receiver with a difference of phase and polarisation which introduce bearing errors. | X         | X   | X          | X    | X   | X  | X                |         |
| (03)                |    | State that interference from other NDB stations on the same frequency may occur at night due to sky-wave contamination.  | X         | X   | X          | X    | X   | X  | X                |         |
| <b>062 02 02 05</b> |    | <b>Factors affecting range and accuracy</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe diffraction of radio waves in mountainous terrain (mountain effect).  | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                |    | State that static radiation energy from a cumulonimbus cloud may interfere with the radio wave and influence the ADF bearing indication.   | X         | X   | X          | X    | X   | X  | X                |         |
| (03)                |    | Explain that the bank angle of the aircraft causes a dip error.  | X         | X   | X          | X    | X   | X  | X                |         |
| <b>062 02 03 00</b> |    | <b>VHF omnidirectional radio range (VOR): conventional VOR (CVOR) and Doppler VOR (DVOR)</b>   |           |     |            |      |     |    |                  |         |
| <b>062 02 03 01</b> |    | <b>Principles</b>  |           |     |            |      |     |    |                  |         |
| (01)                | X  | Explain the working principle of VOR using the following general terms:<br>— reference phase;<br>— variable phase;<br>— phase difference.  | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (02)               |    | State that the frequency band allocated to VOR according to ICAO Annex 10 is VHF, and the frequencies used are 108.0–117.975 MHz.  | X         | X   | X          | X    | X   | X  | X                |         |
| (03)               |    | State that frequencies within the allocated VOR range 108.0–111.975 MHz, which have an odd number in the first decimal place, are used by instrument landing system (ILS).   | X         | X   | X          | X    | X   | X  | X                |         |
| (04)               |    | State that the following types of VOR are in operation: <ul style="list-style-type: none"> <li>— conventional VOR (CVOR): a first-generation VOR station emitting signals by means of a rotating antenna;</li> <li>— Doppler VOR (DVOR): a second-generation VOR station emitting signals by means of a combination of fixed antennas utilising the Doppler principle;</li> <li>— en-route VOR for use by IFR traffic;</li> <li>— terminal VOR (TVOR): a station with a shorter range used as part of the approach and departure structure at major aerodromes;</li> <li>— test VOR (VOT): a VOR station emitting a signal to test VOR indicators in an aircraft.</li> </ul> | X         | X   | X          | X    | X   | X  | X                |         |
| (05)               |    | State that automatic terminal information service (ATIS) information is transmitted on VOR frequencies.  | X         | X   | X          | X    | X   | X  | X                |         |
| (06)               | X  | List the three main components of VOR airborne equipment: <ul style="list-style-type: none"> <li>— the antenna;</li> <li>— the receiver;</li> <li>— the indicator.</li> </ul>  | X         | X   | X          | X    | X   | X  | X                |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (07)                |    | Describe the identification of a VOR in terms of Morse-code letters and additional plain text.   | X         | X   | X          | X    | X   | X  | X                |         |
| (08)                | X  | State that according to ICAO Annex 10, a VOR station has an automatic ground monitoring system.  | X         | X   | X          | X    | X   | X  |                  |         |
| (09)                |    | State that failure of the VOR station to stay within the required limits can cause the removal of identification and navigation components from the carrier or radiation to cease.                                     | X         | X   | X          | X    | X   | X  | X                |         |
| <b>062 02 03 02</b> |    | <b>Presentation and interpretation</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Read off the radial on an RMI.   | X         | X   | X          | X    | X   | X  |                  |         |
| (02)                |    | Read off the angular displacement in relation to a preselected radial on a horizontal situation indicator (HSI) or omnibearing indicator (OBI).  | X         | X   | X          | X    | X   | X  |                  |         |
| (03)                |    | Explain the use of the TO/FROM indicator in order to determine aircraft position relative to the VOR considering also the heading of the aircraft.   | X         | X   | X          | X    | X   | X  |                  |         |
| (04)                |    | Interpret VOR information as displayed on HSI, CDI and RMI.  | X         | X   | X          | X    | X   | X  |                  |         |
| (05)                |    | Describe the following in-flight VOR procedures according to ICAO Doc 8168 Volume 1:<br>— tracking, and explain the influence of wind when tracking;<br>— interceptions;<br>— procedural turns;<br>— holding patterns. | X         | X   | X          | X    | X   | X  |                  |         |
| (06)                |    | State that when converting a radial into a true bearing,   | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | the variation at the VOR station has to be taken into account.  |           |     |            |      |     |    |                  |         |
| <b>062 02 03 03</b> |    | <b><i>Intentionally left blank</i></b>  |           |     |            |      |     |    |                  |         |
| <b>062 02 03 04</b> |    | <b><i>Errors and accuracy</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Define that the accuracy the pilot has to fly the required bearing in order to be considered established on a VOR track when flying approach procedures, according to ICAO Doc 8168, has to be within the half-full scale deflection of the required track. | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                |    | State that due to reflections from terrain, radials can be bent and lead to wrong or fluctuating indications, which is called 'scalloping'.   | X         | X   | X          | X    | X   | X  | X                |         |
| <b>062 02 04 00</b> |    | <b>Distance-measuring equipment (DME)</b>   |           |     |            |      |     |    |                  |         |
| <b>062 02 04 01</b> |    | <b><i>Principles</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State that DME operates in the UHF band.  | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                | X  | State that the system comprises two basic components:<br>— the aircraft component: the interrogator;<br>— the ground component: the transponder.  | X         | X   | X          | X    | X   | X  | X                |         |
| (03)                |    | Describe the principle of distance measurement using DME in terms of a timed transmission from the interrogator and reply from the transponder on different frequencies.  | X         | X   | X          | X    | X   | X  |                  |         |
| (04)                |    | Explain that the distance measured by DME is slant range.   | X         | X   | X          | X    | X   | X  | X                |         |
| (05)                |    | Illustrate that a position line using DME is a circle with the  | X         | X   | X          | X    | X   | X  | X                |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | station at its centre.   |           |     |            |      |     |    |                  |         |
| (06)                |    | State that the pairing of VHF and UHF frequencies (VOR/DME) enables the selection of two items of navigation information from one frequency setting.   | X         | X   | X          | X    | X   | X  | X                |         |
| (07)                | X  | Describe, in the case of co-location with VOR and ILS, the frequency pairing and identification procedure.   | X         | X   | X          | X    | X   | X  | X                |         |
| (08)                |    | State that military UHF tactical air navigation aid (TACAN) stations may be used for DME information.  | X         | X   | X          | X    | X   | X  | X                |         |
| <b>062 02 04 02</b> |    | <b>Presentation and interpretation</b>   |           |     |            |      |     |    |                  |         |
| (01)                | X  | State that when identifying a DME station co-located with a VOR station, the identification signal with the higher-tone frequency is the DME which identifies itself approximately every 40 seconds. | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                |    | Calculate ground distance from given slant range and altitude.   | X         | X   | X          | X    | X   | X  | X                |         |
| (03)                |    | Describe the use of DME to fly a DME arc in accordance with ICAO Doc 8168 Volume 1.  | X         | X   | X          | X    | X   | X  | X                |         |
| (04)                | X  | State that a DME system may have a ground speed (GS) and time to station read-out combined with the DME read-out.  | X         | X   | X          | X    | X   | X  | X                |         |
| <b>062 02 04 03</b> |    | <b>Coverage and range</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain why a ground station can generally respond to a maximum of 100 aircraft.   | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                |    | Explain which aircraft will be denied a DME range first when more than 100 interrogations are being made.  | X         | X   | X          | X    | X   | X  | X                |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| <b>062 02 04 04</b> |    | <b><i>Intentionally left blank</i></b>   |           |     |            |      |     |    |                  |         |
| <b>062 02 04 05</b> |    | <b><i>Factors affecting range and accuracy</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain why the GS read-out from a DME can be less than the actual GS, and is zero when flying a DME arc.  | X         | X   | X          | X    | X   | X  | X                |         |
| <b>062 02 05 00</b> |    | <b>Instrument landing system (ILS)</b>   |           |     |            |      |     |    |                  |         |
| <b>062 02 05 01</b> |    | <b><i>Principles</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Name the three main components of an ILS:<br>— the localiser (LOC);<br>— the glide path (GP);<br>— range information (markers or DME).   | X         |     | X          |      |     | X  | X                |         |
| (02)                | X  | State the site locations of the ILS components:<br>— the LOC antenna should be located on the extension of the runway centre line at the stop-end;<br>— the GP antenna should be located beyond the runway threshold, laterally displaced to the side of the runway centre line. | X         |     | X          |      |     | X  | X                |         |
| (03)                |    | Explain that marker beacons produce radiation patterns to indicate predetermined distances from the threshold along the ILS GP.  | X         |     | X          |      |     | X  | X                |         |
| (04)                |    | State that marker beacons are sometimes replaced by a DME paired with the LOC frequency.   | X         |     | X          |      |     | X  | X                |         |
| (05)                |    | State that in the ILS LOC frequency assigned band 108.0–111.975 MHz, only frequencies which have an odd number in the first decimal are ILS LOC frequencies.   | X         |     | X          |      |     | X  | X                |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |

| (06)               |    | State that the GP operates in the UHF band.  | X         |     | X          |      |     | X  | X                |         |
| (07)               | X  | Describe the use of the 90-Hz and the 150-Hz signals in the LOC and GP transmitters/receivers, stating how the signals at the receivers vary with angular deviation.   | X         |     | X          |      |     | X  | X                |         |
| (08)               |    | State that the UHF GP frequency is selected automatically by being paired with the LOC frequency.  | X         |     | X          |      |     | X  |                  |         |
| (09)               |    | Explain that both the LOC and the GP antenna radiates side lobes (false beams) which can give rise to false centre-line and false GP indication.   | X         |     | X          |      |     | X  | X                |         |
| (10)               | X  | Explain that the back beam from the LOC antenna may be used as a published 'non-precision approach'.   | X         |     | X          |      |     | X  | X                |         |
| (11)               |    | State that the recommended GP is 3°.   | X         |     | X          |      |     | X  | X                |         |
| (12)               |    | <p>Name the frequency, modulation and identification assigned to all marker beacons.</p> <p>All marker beacons operate on 75-MHz carrier frequency.</p> <p>The modulation frequencies of the audio are:</p> <ul style="list-style-type: none"> <li>— outer marker: low;</li> <li>— middle marker: medium;</li> <li>— inner marker: high.</li> </ul> <p>The audio frequency modulation (for identification) is the continuous modulation of the audio frequency and is keyed as follows:</p> <ul style="list-style-type: none"> <li>— outer marker: 2 dashes per second continuously;</li> <li>— middle marker: a continuous series of alternate dots and dashes;</li> <li>— inner marker: 6 dots per second continuously.</li> </ul> | X         |     | X          |      |     | X  | X                |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | The outer-marker cockpit indicator is coloured blue, the middle marker amber, and the inner marker white.  |           |     |            |      |     |    |                  |         |
| (13)                |    | State that the final-approach area contains a fix or facility that permits verification of the ILS GP–altimeter relationship. The outer marker or DME is usually used for this purpose.  | X         |     | X          |      |     | X  | X                |         |
| <b>062 02 05 02</b> |    | <b>Presentation and interpretation</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the ILS identification regarding frequency and Morse code or plain text.  | X         |     | X          |      |     | X  | X                |         |
| (02)                |    | State that an ILS installation has an automatic ground monitoring system.  | X         |     | X          |      |     | X  |                  |         |
| (03)                |    | State that the LOC and GP monitoring system monitors any shift in the LOC and GP mean course line or reduction in signal strength.   | X         |     | X          |      |     | X  |                  |         |
| (04)                |    | State that warning flags will appear for both the LOC and the GP if the received signal strength is below a threshold value.   | X         |     | X          |      |     | X  | X                |         |
| (05)                |    | Describe the circumstances in which warning flags will appear for both the LOC and the GP:<br>— absence of the carrier frequency;<br>— absence of the modulation simultaneously;<br>— the percentage modulation of the navigation signal reduced to 0. | X         |     | X          |      |     | X  |                  |         |
| (06)                |    | Interpret the indications on a CDI and an HSI:<br>— full-scale deflection of the CDI needle corresponds to approximately 2.5° displacement from the ILS centre line;   | X         |     | X          |      |     | X  | X                |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | — full-scale deflection on the GP corresponds to approximately 0.7° from the ILS GP centre line.  |           |     |            |      |     |    |                  |         |
| (07)                |    | Interpret the aircraft's position in relation to the extended runway centre line on a back-beam approach.   | X         |     | X          |      |     | X  |                  |         |
| (08)                |    | Explain the setting of the course pointer of an HSI and the course selector of an omnibearing indicator (OBI) for front-beam and back-beam approaches.  | X         |     | X          |      |     | X  |                  |         |
| <b>062 02 05 03</b> |    | <b>Coverage and range</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Sketch the standard coverage area of the LOC and GP with angular sector limits in degrees and distance limits from the transmitter:<br>— LOC coverage area is 10° on either side of the centre line to a distance of 25 NM from the runway, and 35° on either side of the centre line to a distance of 17 NM from the runway;<br>— GP coverage area is 8° on either side of the centre line to a distance of minimum 10 NM from the runway. | X         |     | X          |      |     | X  | X                |         |
| <b>062 02 05 04</b> |    | <b>Errors and accuracy</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain that ILS approaches are divided into facility performance categories defined in ICAO Annex 10.  | X         |     | X          |      |     | X  | X                |         |
| (02)                |    | Define the following ILS operation categories:<br>— Category I;<br>— Category II;<br>— Category IIIA;<br>— Category IIIB;   | X         |     | X          |      |     | X  |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | — Category IIIC.   |           |     |            |      |     |    |                  |         |
| (03)                |    | Explain that all Category III ILS operations guidance information is provided from the coverage limits of the facility to, and along, the surface of the runway.   | X         |     | X          |      |     | X  |                  |         |
| (04)                |    | Explain why the accuracy requirements are progressively higher for CAT I, CAT II and CAT III ILS.  | X         |     | X          |      |     | X  |                  |         |
| (05)                |    | Explain the following in accordance with ICAO Doc 8168:<br>— the accuracy the pilot has to fly the ILS LOC to be considered established on an ILS track is within the half-full scale deflection of the required track;<br>— the aircraft has to be established within the half-scale deflection of the LOC before starting descent on the GP;<br>— the pilot has to fly the ILS GP to a maximum of half-scale fly-up deflection of the GP in order to stay in protected airspace. | X         |     | X          |      |     | X  | X                |         |
| (06)                |    | State that if a pilot deviates by more than half-course deflection on the LOC or by more than half-dot deflection on the GP, an immediate go-around should be executed because obstacle clearance may no longer be guaranteed.   | X         |     | X          |      |     | X  | X                |         |
| (07)                |    | Describe ILS beam bends as deviations from the nominal LOC and GP respectively which can be assessed by flight test.   | X         |     | X          |      |     | X  |                  |         |
| (08)                |    | Explain that multipath interference is caused by reflections from objects within the ILS coverage area.  | X         |     | X          |      |     | X  |                  |         |
| <b>062 02 05 05</b> |    | <b>Factors affecting range and accuracy</b>  |           |     |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (01)                |    | Define the 'ILS-critical area': an area of defined dimensions around the LOC and GP antennas where vehicles, including aircraft, are excluded during all ILS operations.   | X         |     | X          |      |     | X  | X                |         |
| (02)                |    | Define the 'ILS-sensitive area': an area extending beyond the ILS-critical area where the parking or movement of vehicles, including aircraft, is controlled to prevent the possibility of unacceptable interference to the ILS signal during ILS operations.  | X         |     | X          |      |     | X  | X                |         |
| <b>062 02 06 00</b> |    | <b>Microwave landing system (MLS)</b>  |           |     |            |      |     |    |                  |         |
| <b>062 02 06 01</b> |    | <b>Principles</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the principle of operation:<br>— horizontal course guidance during the approach;<br>— vertical guidance during the approach;<br>— horizontal guidance for departure and missed approach;<br>— DME (DME/P) distance;<br>— transmission of special information regarding the system and the approach conditions. | X         |     | X          |      |     | X  |                  |         |
| (02)                |    | State that MLS operates in the S band on 200 channels.   | X         |     | X          |      |     | X  |                  |         |
| (03)                |    | Explain the reason why MLS can be installed at aerodromes where, as a result of the effects of surrounding buildings or terrain, ILS siting is difficult.  | X         |     | X          |      |     | X  |                  |         |
| <b>062 02 06 02</b> |    | <b>Presentation and interpretation</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Interpret the display of airborne equipment designed to continuously show the position of the aircraft in relation   | X         |     | X          |      |     | X  |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | to a preselected course and glide path, along with distance information, during approach and departure.  |           |     |            |      |     |    |                  |         |
| (02)                |    | Explain that segmented approaches can be carried out with a presentation with two cross bars directed by a computer which has been programmed with the approach to be flown.                 | X         |     | X          |      |     | X  |                  |         |
| (03)                |    | Illustrate that segmented and curved approaches can only be executed with DME/P installed.   | X         |     | X          |      |     | X  |                  |         |
| (04)                |    | Explain why aircraft are equipped with a multimode receiver (MMR) in order to be able to receive ILS, MLS and GPS.   | X         |     | X          |      |     | X  |                  |         |
| (05)                |    | Explain why MLS without DME/P gives an ILS lookalike straight-line approach.   | X         |     | X          |      |     | X  |                  |         |
| <b>062 02 06 03</b> |    | <b>Coverage and range</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the coverage area for the approach direction as being within a sector of $\pm 40^\circ$ of the centre line out to a range of 20 NM from the threshold (according to ICAO Annex 10). | X         |     | X          |      |     | X  |                  |         |
| <b>062 03 00 00</b> |    | <b>RADAR</b>   |           |     |            |      |     |    |                  |         |
| <b>062 03 01 00</b> |    | <b>Pulse techniques</b>  |           |     |            |      |     |    |                  |         |
| <b>062 03 01 01</b> |    | <b>Pulse techniques and associated terms</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Name the different applications of radar with respect to air traffic control (ATC), weather observations, and airborne weather radar (AWR).  | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                | X  | Describe the pulse technique and echo principle on which   | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | primary radar systems are based.  |           |     |            |      |     |    |                  |         |
| (03)                | X  | State that the range of a radar depends on pulse repetition frequency (PRF), pulse length, pulse power, height of aircraft, height of antenna and frequency used. | X         | X   | X          | X    | X   | X  |                  |         |

| <b>062 03 02 01</b> |    | <b>Principles</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain that primary radar provides bearing and distance of targets.  | X         |     | X          | X    |     | X  | X                |         |
| (02)                | X  | Explain that primary ground radar is used to detect aircraft that are not equipped with a secondary radar transponder.  | X         |     | X          | X    |     | X  | X                |         |
| <b>062 03 02 02</b> |    | <b>Presentation and interpretation</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State that modern ATC systems use inputs from various sensors to generate the display.  | X         |     | X          | X    |     | X  | X                |         |
| <b>062 03 03 00</b> |    | <b>Airborne weather radar</b>   |           |     |            |      |     |    |                  |         |
| <b>062 03 03 01</b> |    | <b>Principles</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | List the two main tasks of the weather radar in respect of weather and navigation.  | X         |     | X          | X    |     | X  | X                |         |
| (02)                |    | State that modern weather radars employ frequencies that give wavelengths of about 3 cm that reflect best on wet hailstones.                                      | X         |     | X          | X    |     | X  | X                |         |
| (03)                | X  | State that the antenna is stabilised in the horizontal plane with signals from the aircraft's attitude reference system.  | X         |     | X          | X    |     | X  | X                |         |
| (04)                | X  | Describe the cone-shaped pencil beam of about 3 to 5°   | X         |     | X          | X    |     | X  | X                |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | beam width used for weather detection.  |           |     |            |      |     |    |                  |         |
| <b>062 03 03 02</b> |    | <b>Presentation and interpretation</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the functions of the following different controls on the radar control panel:<br>— off/on switch;<br>— function switch with WX, WX+T and MAP modes;<br>— gain-control setting (auto/manual);<br>— tilt/autotilt switch. | X         |     | X          | X    |     | X  | X                |         |
| (02)                |    | Name, for areas of differing reflection intensity, the colour gradations (green, yellow, red and magenta) indicating the increasing intensity of precipitation.   | X         |     | X          | X    |     | X  | X                |         |
| (03)                | X  | State the use of azimuth-marker lines and range lines in respect of the relative bearing and the distance to a thunderstorm on the screen.  | X         |     | X          | X    |     | X  | X                |         |
| <b>062 03 03 03</b> |    | <b>Coverage and range</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain how the radar is used for weather detection and for mapping (range, tilt and gain, if available).   | X         |     | X          | X    |     | X  | X                |         |
| <b>062 03 03 04</b> |    | <b>Errors, accuracy, limitations</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain why AWR should be used with extreme caution when on the ground.   | X         |     | X          | X    |     | X  | X                |         |
| <b>062 03 03 05</b> |    | <b>Factors affecting range and accuracy</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the danger of the area behind heavy rain (shadow area) where no radar waves will penetrate.   | X         |     | X          | X    |     | X  | X                |         |
| (02)                |    | Describe appropriate tilt settings in relation to altitude and thunderstorms.   | X         |     | X          | X    |     | X  | X                |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (03)                |    | Explain why a thunderstorm may not be detected when the tilt is set too high.   | X         |     | X          | X    |     | X  | X                |         |
| <b>062 03 03 06</b> |    | <b>Application for navigation</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the navigation function of the radar in the mapping mode.  | X         |     | X          | X    |     | X  | X                |         |
| (02)                |    | Describe the use of the weather radar to avoid a thunderstorm (Cb).   | X         |     | X          | X    |     | X  | X                |         |
| (03)                |    | Explain how turbulence (not CAT) can be detected by a modern weather radar.   | X         |     | X          | X    |     | X  | X                |         |
| (04)                |    | Explain how wind shear can be detected by a modern weather radar.   | X         |     | X          | X    |     | X  | X                |         |
| <b>062 03 04 00</b> |    | <b>Secondary surveillance radar and transponder</b>   |           |     |            |      |     |    |                  |         |
| <b>062 03 04 01</b> |    | <b>Principles</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | State that the ATC system is based on the replies provided by the airborne transponders in response to interrogations from the ATC secondary radar.   | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                | X  | State that the ground ATC secondary radar uses techniques which provide the ATC with information that cannot be acquired by the primary radar.  | X         | X   | X          | X    | X   | X  | X                |         |
| (03)                | X  | State that an airborne transponder provides coded-reply signals in response to interrogation signals from the ground secondary radar and from aircraft equipped with traffic alert and collision avoidance system (TCAS). | X         | X   | X          | X    | X   | X  | X                |         |
| (04)                |    | State the advantages of secondary surveillance radar (SSR) over a primary radar regarding range and collected information due to transponder principal information and  | X         | X   | X          | X    | X   | X  | X                |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | active participation of the aircraft.   |           |     |            |      |     |    |                  |         |
| <b>062 03 04 02</b> |    | <b>Modes and codes</b>  |           |     |            |      |     |    |                  |         |
| (01)                | X  | State that the interrogator transmits its interrogations in the form of a series of pulse pairs.  | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                |    | Name the interrogation modes:<br>— Mode A and C, and successor Mode S;<br>— Mode S.   | X         | X   | X          | X    | X   | X  | X                |         |
| (03)                |    | State that the interrogation frequency and the reply frequency are different.   | X         | X   | X          | X    | X   |    |                  |         |
| (04)                |    | Explain that the decoding of the time interval between the pulse pairs determines the operating mode of the transponder:<br>— Mode A: transmission of aircraft transponder code;<br>— Mode C: transmission of aircraft pressure altitude;<br>— Mode S: selection of aircraft address and transmission of flight data for the ground surveillance. | X         | X   | X          | X    | X   |    |                  |         |
| (05)                |    | State that Mode A designation is a sequence of four digits which can be manually selected from 4 096 available codes.   | X         | X   | X          | X    | X   | X  | X                |         |
| (06)                |    | State that in Mode C reply, the pressure altitude is reported in 100-ft increments.   | X         | X   | X          | X    | X   | X  |                  |         |
| (07)                |    | State that in addition to the information provided, on request from ATC, a special position identification (SPI) pulse can be transmitted but only as a result of a manual selection by the pilot (IDENT button).   | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (08)                | X  | State the need for compatibility of Mode S with Mode A and C.   | X         | X   | X          | X    | X   | X  |                  |         |
| (09)                |    | Explain that Mode S transponders receive interrogations from TCAS and SSR ground stations.  | X         | X   | X          | X    | X   | X  |                  |         |
| (10)                | X  | State that Mode S interrogation contains either the aircraft address, selective call or all-call address.   | X         | X   | X          | X    | X   | X  |                  |         |
| (11)                | X  | State that every aircraft is allocated an ICAO aircraft address, which is hard-coded into the Mode S transponder (Mode S address).  | X         | X   | X          | X    | X   | X  | X                |         |
| (12)                |    | Explain that a 24-bit address is used in all Mode S transmissions, so that every interrogation can be directed to a specific aircraft.                                      | X         | X   | X          | X    | X   | X  |                  |         |
| (13)                |    | State that Mode S can provide enhanced vertical tracking, using a 25-ft altitude increment.   | X         | X   | X          | X    | X   | X  |                  |         |
| (14)                |    | State that SSR can be used for automatic dependent surveillance — broadcast (ADS-B).  | X         | X   | X          | X    | X   | X  |                  |         |
| <b>062 03 04 03</b> |    | <b>Presentation and interpretation</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State that an aircraft can be identified by a unique code.  | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                |    | State which information can be presented on the ATC display system:<br>— pressure altitude;<br>— flight level;<br>— flight number or aircraft registration number;<br>— GS. | X         | X   | X          | X    | X   | X  | X                |         |
| (03)                | X  | Explain the use and function of the selector modes: OFF, Standby, ON (Mode A), ALT (Mode A, C and S), TEST, and   | X         | X   | X          | X    | X   | X  | X                |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | of the reply lamp.  |           |     |            |      |     |    |                  |         |
| (04)                |    | State that every aircraft is allocated an ICAO aircraft address which is hard-coded into the airframe Mode S transponder (Mode S address).  | X         | X   | X          | X    | X   | X  |                  |         |
| <b>062 04 00 00</b> |    | <b>INTENTIONALLY LEFT BLANK</b>   |           |     |            |      |     |    |                  |         |
| <b>062 05 00 00</b> |    | <b>INTENTIONALLY LEFT BLANK</b>   |           |     |            |      |     |    |                  |         |
| <b>062 06 00 00</b> |    | <b>GLOBAL NAVIGATION SATELLITE SYSTEMS (GNSSs)</b>  |           |     |            |      |     |    |                  |         |
| <b>062 06 01 00</b> |    | <b>Global navigation satellite systems (GNSSs)</b>  |           |     |            |      |     |    |                  |         |
| <b>062 06 01 01</b> |    | <b>General</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State that there are four main GNSSs. These are:<br>— USA NAVigation System with Timing And Ranging Global Positioning System (NAVSTAR GPS);<br>— Russian GLObal NAVigation Satellite System (GLONASS);<br>— European Galileo (under construction);<br>— Chinese BeiDou (under construction). | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                | X  | State that all four systems (will) consist of a constellation of satellites which can be used by a suitably equipped receiver to determine position.  | X         | X   | X          | X    | X   | X  | X                |         |
| <b>062 06 01 02</b> |    | <b>Operation</b>  |           |     |            |      |     |    |                  |         |
|                     |    | <b>Global navigation satellite system (GNSS)</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State that there are currently two modes of operation: standard positioning service (SPS) for civilian users, and precise positioning service (PPS) for authorised  | X         | X   | X          | X    | X   | X  | X                |         |

|--------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                    |    | users.   |           |     |            |      |     |    |                  |         |
| (02)               |    | SPS was originally designed to provide civilian users with a less accurate positioning capability than PPS.  | X         | X   | X          | X    | X   | X  | X                |         |
| (03)               | X  | Name the three GNSS segments as follows:<br>— space segment;<br>— control segment;<br>— user segment.  | X         | X   | X          | X    | X   | X  | X                |         |
|                    |    | <b>Space segment (example: NAVSTAR GPS)</b>  |           |     |            |      |     |    |                  |         |
| (04)               |    | State that each satellite broadcasts ranging signals on two UHF frequencies: L1 and L2.  | X         | X   | X          | X    | X   | X  |                  |         |
| (05)               |    | State that SPS is a positioning and timing service provided on frequency L1.   | X         | X   | X          | X    | X   | X  |                  |         |
| (06)               |    | State that PPS uses both frequencies L1 and L2.  | X         | X   | X          | X    | X   | X  |                  |         |
| (07)               | X  | State that the satellites transmit a coded signal used for ranging, identification (satellite individual PRN code), timing and navigation.   | X         | X   | X          | X    | X   | X  |                  |         |
| (08)               | X  | State that the navigation message contains:<br>— satellite clock correction parameters;<br>— Universal Time Coordinated (UTC) parameters;<br>— an ionospheric model;<br>— satellite health data. | X         | X   | X          | X    | X   | X  |                  |         |
| (09)               | X  | State that an ionospheric model is used to calculate the time delay of the signal travelling through the ionosphere.   | X         | X   | X          | X    | X   | X  | X                |         |
| (10)               | X  | State that two codes are transmitted on the L1 frequency,  | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                    |    | namely a coarse acquisition (C/A) code and a precision (P) code. The P code is not used for standard positioning service (SPS).  |           |     |            |      |     |    |                  |         |
| (11)               | X  | State that satellites are equipped with atomic clocks which allow the system to keep very accurate time reference.   | X         | X   | X          | X    | X   | X  | X                |         |
|                    |    | <b>Control segment</b>   |           |     |            |      |     |    |                  |         |
| (12)               | X  | State that the control segment comprises:<br>— a master control station;<br>— a ground antenna;<br>— monitoring stations.  | X         | X   | X          | X    | X   | X  | X                |         |
| (13)               | X  | State that the control segment provides:<br>— monitoring of the constellation status;<br>— correction of orbital parameters;<br>— navigation data uploading.   | X         | X   | X          | X    | X   | X  | X                |         |
|                    |    | <b>User segment</b>  |           |     |            |      |     |    |                  |         |
| (14)               | X  | State that GNSS supplies three-dimensional position fixes and speed data, plus a precise time reference.   | X         | X   | X          | X    | X   | X  | X                |         |
| (15)               | X  | State that a GNSS receiver is able to determine the distance to a satellite by determining the difference between the time of transmission by the satellite and the time of reception.                       | X         | X   | X          | X    | X   | X  | X                |         |
| (16)               | X  | State that the initial distance calculated to the satellites is called pseudo-range because the difference between the GNSS receiver and the satellite time references initially creates an erroneous range. | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (17)               | X  | State that each range defines a sphere with its centre at the satellite.   | X         | X   | X          | X    | X   | X  | X                |         |
| (18)               | X  | State that there are four unknown parameters (x, y, z and $\Delta t$ ) (receiver clock error) which require the measurement of ranges to four different satellites in order to get the position. | X         | X   | X          | X    | X   | X  | X                |         |
| (19)               | X  | State that the GNSS receiver is able to synchronise to the correct time reference when receiving four satellites.  | X         | X   | X          | X    | X   | X  | X                |         |
| (20)               | X  | State that the receiver is able to calculate aircraft ground speed using the space vehicle (SV) Doppler frequency shift or the change in receiver position over time.                            | X         | X   | X          | X    | X   | X  |                  |         |
|                    |    | <b>NAVigation System with Timing And Ranging Global Positioning System (NAVSTAR GPS) integrity</b>   |           |     |            |      |     |    |                  |         |
| (21)               |    | Define 'receiver autonomous integrity monitoring (RAIM)' as a technique that ensures the integrity of the provided data by redundant measurements.   | X         | X   | X          | X    | X   | X  | X                |         |
| (22)               |    | State that RAIM is achieved by consistency checks among range measurements.  | X         | X   | X          | X    | X   | X  | X                |         |
| (23)               |    | State that basic RAIM requires five satellites. A sixth one is for isolating a faulty satellite from the navigation solution.  | X         | X   | X          | X    | X   | X  | X                |         |
| (24)               |    | State that agreements have been concluded between the appropriate agencies for the compatibility and interoperability by any approved user of NAVSTAR and GLONASS systems.                       | X         | X   | X          | X    | X   | X  |                  |         |
| (25)               | X  | State that the different GNSSs use different data with respect to reference systems, orbital data, and navigation  | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | services.   |           |     |            |      |     |    |                  |         |
| <b>062 06 01 03</b> |    | <b>Errors and factors affecting accuracy</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | List the most significant factors that affect accuracy:<br>— ionospheric propagation delay;<br>— dilution of position;<br>— satellite clock error;<br>— satellite orbital variations;<br>— multipath. | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                |    | State that a user equivalent range error (UERE) can be computed from all these factors.   | X         | X   | X          | X    | X   | X  |                  |         |
| (03)                | X  | State that the error from the ionospheric propagation delay (IPD) can be reduced by modelling, using a model of the ionosphere, or can almost be eliminated by using two frequencies.                 | X         | X   | X          | X    | X   | X  |                  |         |
| (04)                | X  | State that ionospheric delay is the most significant error.   | X         | X   | X          | X    | X   | X  |                  |         |
| (05)                |    | State that dilution of position arises from the geometry and number of satellites in view. It is called geometric dilution of precision (GDOP).   | X         | X   | X          | X    | X   | X  |                  |         |
| (06)                |    | State that the UERE in combination with the geometric dilution of precision (GDOP) allows for an estimation of position accuracy.   | X         | X   | X          | X    | X   | X  |                  |         |
| (07)                | X  | State that errors in the satellite orbits are due to:<br>— solar winds;<br>— gravitation of the Sun and the Moon.   | X         | X   | X          | X    | X   | X  |                  |         |
| <b>062 06 02 00</b> |    | <b>Ground-, satellite- and airborne-based augmentation</b>  |           |     |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | <b>systems</b>   |           |     |            |      |     |    |                  |         |
| <b>062 06 02 01</b> |    | <b>Ground-based augmentation systems (GBASs)</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the principle of a GBAS: to measure on the ground the errors in the signals transmitted by GNSS satellites and relay the measured errors to the user for correction.   | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                | X  | State that the ICAO GBAS standard is based on this technique through the use of a data link in the VHF band of ILS–VOR systems (108–118 MHz).  | X         | X   | X          | X    | X   | X  | X                |         |
| (03)                |    | State that for a GBAS station the coverage is about 20 NM.   | X         | X   | X          | X    | X   | X  | X                |         |
| (04)                |    | State that GBAS provides information for guidance in the terminal area, and for three-dimensional guidance in the final approach segment (FAS) by transmitting the FAS data block.   | X         | X   | X          | X    | X   | X  | X                |         |
| (05)                |    | State that one ground station can support all the aircraft subsystems within its coverage providing the aircraft with approach data, corrections and integrity information for GNSS satellites in view via a VHF data broadcast (VDB). | X         | X   | X          | X    | X   | X  |                  |         |
| (06)                | X  | State that the minimum software designed coverage area is 10° on either side of the final approach path to a distance between 15 and 20 NM, and 35° on either side of the final approach path up to a distance of 15 NM.               | X         | X   | X          | X    | X   | X  |                  |         |
| (07)                |    | State that outside this area the FAS data of GBAS is not used.   | X         | X   | X          | X    | X   | X  |                  |         |
| (08)                | X  | State that GBAS based on GPS is sometimes called local area augmentation system (LAAS).  | X         | X   | X          | X    | X   | X  |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (09)                |    | State that a GBAS-based approach is called GLS approach (GLS-GNSS landing system).  | X         | X   | X          | X    | X   | X  |                  |         |
| <b>062 06 02 02</b> |    | <b>Satellite-based augmentation systems (SBASs)</b>   |           |     |            |      |     |    |                  |         |
| (01)                | X  | Explain the principle of an SBAS: to measure on the ground the errors in the signals received from the satellites and transmit differential corrections and integrity messages for navigation satellites.   | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                | X  | State that the frequency band of the data link is identical to that of the GPS signals.   | X         | X   | X          | X    | X   | X  | X                |         |
| (03)                | X  | Explain that the use of geostationary satellites enables messages to be broadcast over very wide areas.   | X         | X   | X          | X    | X   | X  | X                |         |
| (04)                | X  | State that pseudo-range measurements to these geostationary satellites can also be made, as if they were GPS satellites.  | X         | X   | X          | X    | X   | X  | X                |         |
| (05)                | X  | State that SBAS consists of two elements:<br>— ground infrastructure (monitoring and processing stations);<br>— communication satellites.   | X         | X   | X          | X    | X   | X  | X                |         |
| (06)                |    | State that SBAS allows the implementation of three-dimensional Type A and Type B approaches.  | X         | X   | X          | X    | X   | X  | X                |         |
| (07)                | X  | State the following examples of SBAS:<br>— European Geostationary Navigation Overlay Service (EGNOS) in western Europe and the Mediterranean;<br>— wide area augmentation system (WAAS) in the USA;<br>— multi-functional transport satellite (MTSAT)-based | X         | X   | X          | X    | X   | X  | X                |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | augmentation system (MSAS) in Japan;<br>— GPS and geostationary earth orbit augmented navigation (GAGAN) in India.  |           |     |            |      |     |    |                  |         |
| (08)                | X  | State that SBAS is designed to significantly improve accuracy and integrity.  | X         | X   | X          | X    | X   | X  | X                |         |
| (09)                |    | Explain that integrity and safety are improved by alerting SBAS users within 6 seconds if a GPS malfunction occurs.   | X         | X   | X          | X    | X   | X  | X                |         |
| <b>062 06 02 03</b> |    | <b>Intentionally left blank</b>   |           |     |            |      |     |    |                  |         |
| <b>062 06 02 04</b> |    | <b>Airborne-based augmentation systems (ABASs)</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the principle of ABAS: to use redundant elements within the GPS constellation (e.g. multiplicity of distance measurements to various satellites) or the combination of GNSS measurements with those of other navigation sensors (such as inertial systems) in order to develop integrity control. | X         | X   | X          | X    | X   | X  | X                |         |
| (02)                |    | State that the type of ABAS using only GNSS information is named receiver autonomous integrity monitoring (RAIM).   | X         | X   | X          | X    | X   | X  | X                |         |
| (03)                |    | State that a system using information from additional onboard sensors is named aircraft autonomous integrity monitoring (AAIM).   | X         | X   | X          | X    | X   | X  | X                |         |
| (04)                |    | Explain that the typical sensors used are barometric altimeter and inertial reference system (IRS).   | X         | X   | X          | X    | X   | X  | X                |         |
| (05)                |    | Define 'receiver autonomous integrity monitoring' (RAIM) as a technique that ensures the integrity of the provided data by redundant measurements.  | X         | X   | X          | X    | X   | X  | X                |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (06)                |    | State that RAIM is achieved by consistency checks among range measurements.   | X         | X   | X          | X    | X   | X  | X                |         |
| (07)                |    | State that basic RAIM requires five satellites. A sixth one is for isolating a faulty satellite from the navigation solution.   | X         | X   | X          | X    | X   | X  | X                |         |
| <b>062 07 00 00</b> |    | <b>PERFORMANCE-BASED NAVIGATION (PBN)</b>   |           |     |            |      |     |    |                  |         |
| <b>062 07 01 00</b> |    | <b>Performance-based navigation (PBN) concept (as described in ICAO Doc 9613)</b>   |           |     |            |      |     |    |                  |         |
| <b>062 07 01 01</b> |    | <b>PBN principles</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | List the factors used to define area navigation (RNAV) or required navigation performance (RNP) system performance requirements (accuracy, integrity and continuity).   | X         |     | X          |      |     | X  | X                |         |
| (02)                | X  | State that these RNAV and RNP systems are necessary to optimise the utilisation of available airspace.  | X         |     | X          |      |     | X  |                  |         |
| (03)                |    | State that it is necessary for flight crew and air traffic controllers to be aware of the on-board RNAV or RNP system capabilities in order to determine whether the performance of the RNAV or RNP system is appropriate for the specific airspace requirements. | X         |     | X          |      |     | X  |                  |         |
| (04)                |    | Define accuracy as the conformance of the true position and the required position.  | X         |     | X          |      |     | X  |                  |         |
| (05)                |    | Define continuity as the capability of the system to perform its function without unscheduled interruptions during the intended operation.  | X         |     | X          |      |     | X  | X                |         |
| (06)                |    | Define integrity as a measure of the trust that can be  | X         |     | X          |      |     | X  | X                |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | placed in the correctness of the information supplied by the total system. Integrity includes the ability of a system to provide timely and valid alerts to the user. |           |     |            |      |     |    |                  |         |
| (07)                |    | State that, unlike conventional navigation, PBN is not sensor-specific.   | X         |     | X          |      |     | X  | X                |         |
| (08)                |    | Explain the difference between raw data and computed data.  | X         |     | X          |      |     | X  | X                |         |
| (09)                |    | Define availability as the percentage of time (annually) during which the system is available for use.  | X         |     | X          |      |     | X  | X                |         |
| <b>062 07 01 02</b> |    | <b>PBN components</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | List the components of PBN as navigational aid (NAVAID) infrastructure, navigation specification and navigation application.  | X         |     | X          |      |     | X  |                  |         |
| <b>062 07 01 03</b> |    | <b>PBN scope</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State that in oceanic/remote, en-route and terminal phases of flight, PBN is limited to operations with linear lateral performance requirements and time constraints. | X         |     | X          |      |     | X  |                  |         |
| (02)                |    | State that in the approach phases of flight, PBN accommodates both linear and angular laterally guided operations, and explain the difference between the two.        | X         |     | X          |      |     | X  |                  |         |
| <b>062 07 02 00</b> |    | <b>Navigation specifications</b>  |           |     |            |      |     |    |                  |         |
| <b>062 07 02 01</b> |    | <b>Area navigation (RNAV) and required navigation performance (RNP)</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | State the difference between RNAV and RNP in terms of the requirement for on-board performance monitoring and alerting.   | X         |     | X          |      |     | X  | X                |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| <b>062 07 02 02</b> |    | <b>Navigation functional requirements</b>   |           |     |            |      |     |    |                  |         |
| (01)                | X  | List the basic functional requirements of the RNAV and RNP specifications (continuous indication of lateral deviation, distance/bearing to active waypoint, GS or time to active waypoint, navigation data storage and failure indication).                               | X         |     | X          |      |     | X  |                  |         |
| <b>062 07 02 03</b> |    | <b>Designation of RNP and RNAV specifications</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Interpret X in RNAV X or RNP X as the lateral navigation (LNAV) accuracy (total system error) in nautical miles, which is expected to be achieved at least 95 % of the flight time by the population of aircraft operating within the given airspace, route or procedure. | X         |     | X          |      |     | X  |                  |         |
| (02)                |    | State that aircraft approved to the more stringent accuracy requirements may not necessarily meet some of the functional requirements of the navigation specification that has a less stringent accuracy requirement.   | X         |     | X          |      |     | X  | X                |         |
| (03)                |    | State that RNAV 10 and RNP 4 are used in the oceanic/remote phase of flight.  | X         |     | X          |      |     | X  |                  |         |
| (04)                |    | State that RNAV 5 is used in the en-route and arrival phases of flight.   | X         |     | X          |      |     | X  | X                |         |
| (05)                |    | State that RNAV 2 and RNP 2 are also used as navigation specifications.   | X         |     | X          |      |     | X  |                  |         |
| (06)                |    | State that RNP 2 is used in the en-route and oceanic/remote phases of flight.   | X         |     | X          |      |     | X  |                  |         |
| (07)                |    | State that RNAV 2 might be used in the en-route continental, arrival and departure phases of flight.  | X         |     | X          |      |     | X  |                  |         |

|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (05)                |    | State that the Aeronautical Radio, Incorporated (ARINC) 424 path terminators set the standards for coding the SIDs, STARs and instrument approach procedures (IAPs) from the official published government source documentation into the ARINC navigation database format. | X         |     | X          |      |     | X  |                  |         |
| (06)                |    | State that the path terminators define a specific type of termination of the previous flight path.   | X         |     | X          |      |     | X  |                  |         |
| (07)                |    | Define the term 'offset flight path'.  | X         |     | X          |      |     | X  | X                |         |
| <b>062 07 03 04</b> |    | <b><i>Intentionally left blank</i></b>   |           |     |            |      |     |    |                  |         |
| <b>062 07 04 00</b> |    | <b>Performance-based navigation (PBN) operations</b>   |           |     |            |      |     |    |                  |         |
| <b>062 07 04 01</b> |    | <b><i>Performance-based navigation (PBN) principles</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Define 'path definition error' (PDE).  | X         |     | X          |      |     | X  | X                |         |
| (02)                |    | Define 'flight technical error' (FTE) and state that the FTE is the error in following the prescribed path, either by the auto-flight system or by the pilot.  | X         |     | X          |      |     | X  | X                |         |
| (03)                |    | Define 'navigation system error' (NSE) and state that the accuracy of a navigation system may be referred to as NSE.   | X         |     | X          |      |     | X  | X                |         |
| (04)                |    | Define 'total system error' (TSE) and state that the geometric sum of the PDE, FTE and NSE equals the TSE.   | X         |     | X          |      |     | X  | X                |         |
| (05)                |    | State that navigation accuracy depends on the TSE.   | X         |     | X          |      |     | X  |                  |         |
| <b>062 07 04 02</b> |    | <b><i>On-board performance monitoring and alerting</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | State that on-board performance monitoring and alerting  | X         |     | X          |      |     | X  | X                |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | of flight technical errors is managed by on-board systems or flight crew procedures.  |           |     |            |      |     |    |                  |         |
| (02)                |    | State that on-board performance monitoring and alerting of navigation system errors is a requirement of on-board equipment for RNP.   | X         |     | X          |      |     | X  | X                |         |
| (03)                |    | State that, dependent on the navigation sensor, the estimated position error (EPE) is compared with the required navigation specification.  | X         |     | X          |      |     | X  |                  |         |
| (04)                |    | Explain how a navigation system assesses the EPE.   | X         |     | X          |      |     | X  |                  |         |
| (05)                |    | Give an example of how the loss of the ability to operate in RNP airspace may be indicated by the navigation system.  | X         |     | X          |      |     | X  |                  |         |
| (06)                |    | State that on-board performance monitoring and alerting of path definition error is managed by gross reasonableness checks of navigation data.  | X         |     | X          |      |     | X  | X                |         |
| <b>062 07 04 03</b> |    | <b>Abnormal situations</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State that abnormal and contingency procedures are to be used in case of loss of the PBN capability.  | X         |     | X          |      |     | X  | X                |         |
| <b>062 07 04 04</b> |    | <b>Database management</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State that, unless otherwise specified in the operations documentation or acceptable means of compliance (AMCs), the navigational database must be valid for the current aeronautical information regulation and control (AIRAC) cycle. | X         |     | X          |      |     | X  | X                |         |
| <b>062 07 05 00</b> |    | <b>Requirements of specific RNAV and RNP specifications</b>   |           |     |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| <b>062 07 05 01</b> |    | <b>RNAV 10</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State that RNAV 10 requires that aircraft operating in oceanic and remote areas be equipped with at least two independent and serviceable long-range navigation systems (LRNSs) comprising an INS, an inertial reference system (IRS)/flight management system (FMS) or a GNSS. | X         |     | X          |      |     | X  |                  |         |
| (02)                |    | State that operators may extend their RNAV 10 navigation capability time by updating.   | X         |     | X          |      |     | X  |                  |         |
| <b>062 07 05 02</b> |    | <b>RNAV 5</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | State that manual data entry is acceptable for RNAV 5.  | X         |     | X          |      |     | X  | X                |         |
| <b>062 07 05 03</b> |    | <b>RNAV 1/RNAV 2/RNP 1/RNP 2</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State that pilots must not fly an RNAV 1, RNAV 2, RNP 1 or RNP 2 standard instrument departure (SID) or standard instrument arrival (STAR) unless it is retrievable by route name from the on-board navigation database and conforms to the charted route.                      | X         |     | X          |      |     | X  | X                |         |
| (02)                |    | State that the route may subsequently be modified through the insertion (from the database) or deletion of specific waypoints in response to ATC clearances.  | X         |     | X          |      |     | X  | X                |         |
| (03)                |    | State that the manual entry, or creation of new waypoints by manual entry, of either latitude and longitude or place/bearing/distance values is not permitted.  | X         |     | X          |      |     | X  | X                |         |
| <b>062 07 05 04</b> |    | <b>Intentionally left blank</b>   |           |     |            |      |     |    |                  |         |
| <b>062 07 05 05</b> |    | <b>Required navigation performance approach (RNP APCH)</b>  |           |     |            |      |     |    |                  |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (01)               |    | State that pilots must not fly an RNP APCH unless it is retrievable by procedure name from the on-board navigation database and conforms to the charted procedure.  | X         |     | X          |      |     | X  | X                |         |
| (02)               |    | State that an RNP APCH to LNAV minima is a non-precision IAP designed for two-dimensional approach operations.  | X         |     | X          |      |     | X  | X                |         |
| (03)               |    | State that an RNP APCH to lateral navigation (LNAV)/vertical navigation (VNAV) minima has lateral guidance based on GNSS and vertical guidance based on either SBAS or barometric vertical navigation (Baro-VNAV).      | X         |     | X          |      |     | X  | X                |         |
| (04)               |    | State that an RNP APCH to LNAV/VNAV minima may only be conducted with vertical guidance certified for the purpose.  | X         |     | X          |      |     | X  | X                |         |
| (05)               |    | Explain why an RNP APCH to LNAV/VNAV minima based on Baro-VNAV may only be conducted when the aerodrome temperature is within a promulgated range if the barometric input is not automatically temperature-compensated. | X         |     | X          |      |     | X  | X                |         |
| (06)               |    | State that the correct altimeter setting is critical for the safe conduct of an RNP APCH using Baro-VNAV.   | X         |     | X          |      |     | X  | X                |         |
| (07)               |    | State that an RNP APCH to LNAV/VNAV minima is a three-dimensional operation.  | X         |     | X          |      |     | X  | X                |         |
| (08)               |    | State that an RNP APCH to localiser performance with vertical guidance (LPV) minima is a three-dimensional operation.   | X         |     | X          |      |     | X  | X                |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (09)                |    | State that RNP APCH to LPV minima requires a final approach segment (FAS) data block.   | X         |     | X          |      |     | X  | X                |         |
| (10)                |    | State that RNP approaches to LPV minima require SBAS.   | X         |     | X          |      |     | X  | X                |         |
| (11)                |    | State that the FAS data block is a standard data format to describe the final approach path.  | X         |     | X          |      |     | X  | X                |         |
| <b>062 07 05 06</b> |    | <b>Required navigation performance authorisation required approach (RNP AR APCH)</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State that RNP AR APCH requires authorisation.  | X         |     | X          |      |     | X  | X                |         |
| <b>062 07 05 07</b> |    | <b>Advanced required navigation performance (A-RNP)</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | State that A-RNP incorporates the navigation specifications RNAV 5, RNAV 2, RNAV 1, RNP 2, RNP 1 and RNP APCH.  | X         |     | X          |      |     | X  |                  |         |
| <b>062 07 05 08</b> |    | <b>PBN point-in-space (PinS) departure</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State that a PinS departure is a departure procedure designed for helicopters only.   |           |     | X          |      |     | X  |                  |         |
| (02)                |    | State that a PinS departure procedure includes either a 'proceed VFR' or a 'proceed visually' instruction from the landing location to the initial departure fix (IDF). |           |     | X          |      |     | X  |                  |         |
| (03)                |    | Recognise the differences in the instructions 'proceed VFR' and 'proceed visually'.   |           |     | X          |      |     | X  |                  |         |
| <b>062 07 05 09</b> |    | <b>PBN point-in-space (PinS) approach</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | State that a PinS approach procedure is an instrument RNP APCH procedure designed for helicopters only, and that it may be published with LNAV minima or LPV minima.    |           |     | X          |      |     | X  |                  |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|

**Appendix to Annex I to ED Decision 2018/001/R**

**‘Acceptable Means of Compliance (AMCs) and Guidance Material (GM) to Part-FCL  
Amendment 3’**

**Appendix**

**‘SUBJECT 081 — PRINCIPLES OF FLIGHT — AEROPLANES’**

**to**

**AMC1 FCL.310; FCL.515(b); FCL.615(b)**

**‘Theoretical knowledge examinations’**

**SUBJECT 081 — PRINCIPLES OF FLIGHT — AEROPLANES**

- (1) The following standard symbols and their corresponding meanings are used for certain mathematical operations:
- |           |   |
|-----------|---|
| *         | multiplication  |
| $\geq$    | greater than or equal to  |
| $\leq$    | less than or equal to   |
| SQRT(...) | square root of the function, symbol or number in round brackets |
- (2) Normally, it should be assumed that the effect of a variable under review is the only variation that needs to be addressed, unless specifically stated otherwise.
- (3) Candidates are expected in simple calculations to be able to convert knots (kt) into metres/second (m/s), and know the appropriate conversion factors by heart.
- (4) In the subsonic range, as covered under Subject 081 01, compressibility effects normally are not considered, unless specifically mentioned.
- (5) For those questions related to propellers (Subject 081 07), as a simplification of the physical reality, the inflow speed into the propeller plane is taken as the aeroplane's true airspeed (TAS).
- (6) In addition, when discussing propeller rotational direction, it will always be specified as seen from behind the propeller plane.
- (7) Note that the term 'mass' is used to describe a quantity of matter, and 'weight' when describing the force. However, the term 'weight' is normally used in aviation to colloquially describe 'mass'. The professional pilot should always note the units to determine whether the term 'weight' is being used to describe a force (e.g. unit newton) or quantity of matter (e.g. unit kilogram).

|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (12)                |    | Define 'total pressure' and explain that the total pressure differs in different systems.                                   | X         | X   |            |      |     |    |                  |         |
| (13)                |    | Apply Bernoulli's equation to flow through a venturi stream tube for incompressible flow.                                   | X         | X   |            |      |     |    |                  |         |
| (14)                |    | Describe how IAS is acquired from the pitot static system.  | X         | X   |            |      |     |    |                  |         |
| (15)                |    | Describe the relationship between density, temperature, and pressure for air.   | X         | X   |            |      |     |    |                  |         |
| (16)                |    | Explain the equation of continuity and its application to the flow through a stream tube.                                   | X         | X   |            |      |     |    |                  |         |
| (17)                | X  | Define 'IAS', 'CAS', 'EAS', and 'TAS'.  | X         | X   |            |      |     |    |                  |         |
| <b>081 01 01 02</b> |    | <b>Basics of airflow</b>  |           |     |            |      |     |    |                  |         |
| (01)                | X  | Describe steady and unsteady airflow.   | X         | X   |            |      |     |    |                  |         |
| (02)                | X  | Explain the concept of a streamline and a stream tube.  | X         | X   |            |      |     |    |                  |         |
| (03)                | X  | Describe and explain airflow through a stream tube.   | X         | X   |            |      |     |    |                  |         |
| (04)                | X  | Explain the difference between two- and three-dimensional airflow.  | X         | X   |            |      |     |    |                  |         |
| <b>081 01 01 03</b> |    | <b>Aerodynamic forces on aerofoils</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the originating point and direction of the resultant force caused by the pressure distribution around an aerofoil. | X         | X   |            |      |     |    |                  |         |
| (02)                | X  | Resolve the resultant force into the components 'lift' and 'drag'.  | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Describe the direction of lift and drag.  | X         | X   |            |      |     |    |                  |         |
| (04)                | X  | Define the 'aerodynamic moment'.  | X         | X   |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (05)                | X  | List the factors that affect the aerodynamic moment.   | X         | X   |            |      |     |    |                  |         |
| (06)                |    | Describe the aerodynamic moment for a symmetrical aerofoil.  | X         | X   |            |      |     |    |                  |         |
| (07)                |    | Describe the aerodynamic moment for a positively and negatively cambered aerofoil.                       | X         | X   |            |      |     |    |                  |         |
| (08)                | X  | Define 'angle of attack' ( $\alpha$ ).   | X         | X   |            |      |     |    |                  |         |
| <b>081 01 01 04</b> |    | <b>Shape of an aerofoil section</b>  |           |     |            |      |     |    |                  |         |
| (01)                | X  | Describe the following parameter of an aerofoil section: leading edge.                                   | X         | X   |            |      |     |    |                  |         |
| (02)                | X  | Describe the following parameter of an aerofoil section: trailing edge.                                  | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Describe the following parameter of an aerofoil section: chord line.                                     | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Describe the following parameter of an aerofoil section: thickness-to-chord ratio or relative thickness. | X         | X   |            |      |     |    |                  |         |
| (05)                |    | Describe the following parameter of an aerofoil section: location of maximum thickness.                  | X         | X   |            |      |     |    |                  |         |
| (06)                |    | Describe the following parameter of an aerofoil section: camber line.                                    | X         | X   |            |      |     |    |                  |         |
| (07)                |    | Describe the following parameter of an aerofoil section: camber.   | X         | X   |            |      |     |    |                  |         |
| (08)                | X  | Describe the following parameter of an aerofoil section: nose radius.                                    | X         | X   |            |      |     |    |                  |         |
| (09)                | X  | Describe a symmetrical and an asymmetrical aerofoil section.   | X         | X   |            |      |     |    |                  |         |
| <b>081 01 01 05</b> |    | <b>Wing shape</b>  |           |     |            |      |     |    |                  |         |

| <b>081 02 01 04</b> |    | <b>Compressibility</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | State that compressibility means that density can change along a streamline, and that this occurs in the high subsonic, transonic, and supersonic flow.                              | X         |     |            |      |     |    |                  |         |
| (02)                | X  | State that compressibility negatively affects the pressure gradient, leading to an overall reduction of the $C_L$ .  | X         |     |            |      |     |    |                  |         |
| (03)                | X  | State that Mach number is a measure of compressibility.  | X         |     |            |      |     |    |                  |         |
| (04)                |    | Describe that compressibility increases low-speed stall speed and decreases $\alpha_{CRIT}$ .  | X         |     |            |      |     |    |                  |         |
| <b>081 02 01 05</b> |    | <b>Subdivision of aerodynamic flow</b>   |           |     |            |      |     |    |                  |         |
| (01)                | X  | List the subdivision of aerodynamic flow:<br>— subsonic flow;<br>— transonic flow;<br>— supersonic flow.   | X         |     |            |      |     |    |                  |         |
| (02)                |    | Describe the characteristics of the flow regimes listed above.   | X         |     |            |      |     |    |                  |         |
| (03)                |    | Explain why some transport aeroplanes normally cruise at Mach numbers above the critical Mach number ( $M_{CRIT}$ ), but below the divergence Mach number ( $M_{DRAG DIVERGENCE}$ ). | X         |     |            |      |     |    |                  |         |
| <b>081 02 02 00</b> |    | <b>Shock waves</b>   |           |     |            |      |     |    |                  |         |
| <b>081 02 02 01</b> |    | <b>Definition of shock wave</b>  |           |     |            |      |     |    |                  |         |
| (01)                | X  | Define a 'shock wave'.   | X         |     |            |      |     |    |                  |         |
| <b>081 02 02 02</b> |    | <b>Normal shock waves</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe a normal shock wave with respect to changes in:<br>— static temperature;  | X         |     |            |      |     |    |                  |         |

|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (01)                |    | Explain why buffet or stall could occur in the following pilot-induced situations, and the methods to mitigate them: <ul style="list-style-type: none"> <li>— inappropriate take-off configuration, detailing the consequences of errors associated with leading-edge devices;</li> <li>— steep turns;</li> <li>— go-around using take-off/go-around (TOGA) setting (underslung engines).</li> </ul> | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Explain why buffet or stall could occur in the following environmental conditions at low altitude, and how to mitigate them: <ul style="list-style-type: none"> <li>— thunderstorms;</li> <li>— wind shear and microburst;</li> <li>— turbulence;</li> <li>— wake turbulence;</li> <li>— icing conditions.</li> </ul>  | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Explain why buffet or stall could occur in the following environmental conditions at high altitude, and how to mitigate them: <ul style="list-style-type: none"> <li>— thunderstorms in the intertropical convergence zone (ITCZ);</li> <li>— jet streams;</li> <li>— clear-air turbulence.</li> </ul>   | X         |     |            |      |     |    |                  |         |
| (04)                |    | Explain why buffet or stall could occur in the following situations, and how to mitigate them: <ul style="list-style-type: none"> <li>— inappropriate autopilot climb mode;</li> <li>— loss of, or unreliable, airspeed indication.</li> </ul>   | X         | X   |            |      |     |    |                  |         |
| <b>081 03 04 00</b> |    | <b>Recognition of stalled condition</b>  |           |     |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| <b>081 03 04 01</b> |    | <b>Recognition and explanation of stalled condition</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain why a stalled condition can occur at any airspeed, or attitude or altitude.   | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Explain that a stall may be recognised by continuous stall-warning activation accompanied by at least one of the following:<br>— buffet, that can be heavy;<br>— lack of pitch authority;<br>— uncommanded pitch down and uncommanded roll;<br>— inability to arrest the descent rate.  | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Explain that ‘stall warning’ means a natural or synthetic indication provided when approaching the stall that may include one or more of the following indications:<br>— aerodynamic buffeting;<br>— reduced roll stability and aileron effectiveness;<br>— visual or aural clues and warnings;<br>— reduced elevator (pitch) authority;<br>— inability to maintain altitude or arrest a rate of descent;<br>— stick-shaker activation. | X         | X   |            |      |     |    |                  |         |
| <b>081 04 00 00</b> |    | <b>STABILITY</b>  |           |     |            |      |     |    |                  |         |
| <b>081 04 01 00</b> |    | <b>Static and dynamic stability</b>   |           |     |            |      |     |    |                  |         |
| <b>081 04 01 01</b> |    | <b>Basics and definitions</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Define ‘static stability’:<br>— describe/identify a statically stable, neutral, and unstable condition (positive, neutral, and negative static stability).  | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Explain manoeuvrability.  | X         | X   |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (03)                |    | Explain why static stability is the opposite of manoeuvrability, and why CAT aeroplanes are designed to be statically stable.  | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Define 'dynamic stability':<br>— describe/identify a dynamically stable, neutral, and unstable motion (positive, neutral, and negative dynamic stability);<br>— describe/identify periodic and aperiodic motion. | X         | X   |            |      |     |    |                  |         |
| (05)                |    | Explain what combinations of static and dynamic stability will return an aeroplane to the equilibrium state after a disturbance.   | X         | X   |            |      |     |    |                  |         |
| <b>081 04 01 02</b> |    | <b>Precondition for static stability</b>   |           |     |            |      |     |    |                  |         |
| (01)                | X  | Explain an equilibrium of forces and moments as the initial condition for the concept of static stability.   | X         | X   |            |      |     |    |                  |         |
| <b>081 04 01 03</b> |    | <b>Sum of forces</b>   |           |     |            |      |     |    |                  |         |
| (01)                | X  | Identify the forces considered in the equilibrium of forces.   | X         | X   |            |      |     |    |                  |         |
| <b>081 04 01 04</b> |    | <b>Sum of moments</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Identify the moments about all three axes considered in the equilibrium of moments.  | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Discuss the effect of sum of moments not being zero.   | X         | X   |            |      |     |    |                  |         |
| <b>081 04 02 00</b> |    | <b>Intentionally left blank</b>  |           |     |            |      |     |    |                  |         |
| <b>081 04 03 00</b> |    | <b>Static and dynamic longitudinal stability</b>   |           |     |            |      |     |    |                  |         |
| <b>081 04 03 01</b> |    | <b>Methods for achieving balance</b>   |           |     |            |      |     |    |                  |         |
| (01)                | X  | Explain the stabiliser as the means to satisfy the condition of nullifying the total sum of the moments about the lateral axis.  | X         | X   |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (02)                |    | Explain the influence of the location of the wing CP relative to the CG on the magnitude and direction of the balancing force on the stabiliser. | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Explain the influence of the indicated airspeed on the magnitude and direction of the balancing force on the stabiliser.                         | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Explain the use of the elevator deflection or stabiliser angle for the generation of the balancing force and its direction.                      | X         | X   |            |      |     |    |                  |         |
| (05)                |    | Explain the elevator deflection required to balance thrust changes.  | X         | X   |            |      |     |    |                  |         |
| <b>081 04 03 02</b> |    | <b>Static longitudinal stability</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Discuss the effect of the CG location on pitch manoeuvrability and longitudinal stability.   | X         | X   |            |      |     |    |                  |         |
| <b>081 04 03 03</b> |    | <b>Neutral point</b>   |           |     |            |      |     |    |                  |         |
| (01)                | X  | Define 'neutral point'.  | X         | X   |            |      |     |    |                  |         |
| (02)                | X  | Explain why the location of the neutral point is only dependent on the aerodynamic design of the aeroplane.                                      | X         | X   |            |      |     |    |                  |         |
| <b>081 04 03 04</b> |    | <b>Factors affecting neutral point</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the location of the neutral point relative to the locations of the aerodynamic centre of the wing and tail.                             | X         | X   |            |      |     |    |                  |         |
| <b>081 04 03 05</b> |    | <b>Location of centre of gravity (CG)</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the influence of the CG location on the static longitudinal stability of the aeroplane.  | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Explain the CG forward and aft limits with respect to:<br>— longitudinal control forces;   | X         | X   |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (01)                |    | State the reasons for using trimming devices.  | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Explain the difference between a trim tab and the various balance tabs.  | X         | X   |            |      |     |    |                  |         |
| <b>081 05 08 02</b> |    | <b>Trim tabs</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the working principle of a trim tab including cockpit indications.  | X         | X   |            |      |     |    |                  |         |
| <b>081 05 08 03</b> |    | <b>Stabiliser trim</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the advantages and disadvantages of a stabiliser trim compared to a trim tab.  | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Explain elevator deflection when the aeroplane is trimmed in the case of fully powered and power-assisted pitch controls.                      | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Explain the relationship between CG position, take-off trim setting, and stabiliser trim position.   | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Explain the effect of errors in the take-off stabiliser trim setting on the rotation characteristics and stick force during take-off rotation. | X         | X   |            |      |     |    |                  |         |
| (05)                |    | Discuss the effects of jammed and runaway stabiliser.  | X         | X   |            |      |     |    |                  |         |
| (06)                |    | Explain the consequences of a jammed stabiliser during take-off, landing, and go-around.   | X         | X   |            |      |     |    |                  |         |
| <b>081 06 00 00</b> |    | <b>LIMITATIONS</b>   |           |     |            |      |     |    |                  |         |
| <b>081 06 01 00</b> |    | <b>Operating limitations</b>   |           |     |            |      |     |    |                  |         |
| <b>081 06 01 01</b> |    | <b>Flutter</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the phenomenon of flutter and how IAS and mass distribution affects the likelihood of flutter occurrence.                             | X         | X   |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (02)                |    | Describe the use of mass balance to alleviate the flutter problem by adjusting the mass distribution:<br>— wing-mounted engines on pylons;<br>— control surface mass balance. | X         | X   |            |      |     |    |                  |         |
| (03)                |    | State how to avoid flutter, and possible actions if flutter occurred.   | X         | X   |            |      |     |    |                  |         |
| <b>081 06 01 02</b> |    | <b>Aileron reversal</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the phenomenon of aileron reversal:<br>— at low speeds;<br>— at high speeds.<br>Describe the aileron reversal speed in relationship to $V_{NE}$ and $V_{NO}$ .       | X         | X   |            |      |     |    |                  |         |
| <b>081 06 01 03</b> |    | <b>Landing gear/flap operating</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the reason for flap/landing gear limitations.<br>— Define ' $V_{LO}$ '.<br>— Define ' $V_{LE}$ '.  | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Explain why there is a difference between $V_{LO}$ and $V_{LE}$ in the case of some aeroplane types.  | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Define ' $V_{FE}$ ' and describe flap limiting speeds.  | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Describe flap design features, procedures and warnings to prevent overload.   | X         | X   |            |      |     |    |                  |         |
| <b>081 06 01 04</b> |    | <b><math>V_{MO}</math>, <math>V_{NO}</math>, and <math>V_{NE}</math></b>  |           |     |            |      |     |    |                  |         |
| (01)                | X  | Define ' $V_{MO}$ ', ' $V_{NO}$ ', and ' $V_{NE}$ '.  | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Describe $V_{MO}$ , $V_{NO}$ and $V_{NE}$ , the relevance of the airspeed on which they are based, and the differences between the  | X         | X   |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |

|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | airspeeds.   |           |     |            |      |     |    |                  |         |
| (03)                |    | Explain the hazards of flying at speeds close to $V_{NE}$ and $V_{MO}$ .   | X         | X   |            |      |     |    |                  |         |
| <b>081 06 01 05</b> |    | <b><math>M_{MO}</math></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Define ' $M_{MO}$ ' and state its limiting factors.  | X         |     |            |      |     |    |                  |         |
| <b>081 06 02 00</b> |    | <b>Manoeuvring envelope</b>  |           |     |            |      |     |    |                  |         |
| <b>081 06 02 01</b> |    | <b>Manoeuvring-load diagram</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the manoeuvring-load diagram.   | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Define limit and ultimate load factor, and explain what can happen if these values are exceeded.   | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Define ' $V_A$ ', ' $V_C$ ', and ' $V_D$ '.  | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Identify and explain the varying features on the $V_N$ diagram: <ul style="list-style-type: none"> <li>— load factor '<math>n</math>';</li> <li>— speed scale, equivalent airspeed;</li> <li>— equivalent airspeed envelope;</li> <li>— <math>C_{LMAX}</math> boundary;</li> <li>— 1g stall speed;</li> <li>— accelerated stall boundary (refer to 081 03 01 02).</li> </ul> | X         | X   |            |      |     |    |                  |         |
| (05)                |    | Describe the relationship between $V_{MO}$ or $V_{NE}$ and $V_C$ .   | X         | X   |            |      |     |    |                  |         |
| (06)                |    | State all the manoeuvring load-factors limits applicable to CS-23 and CS-25 aeroplanes.  | X         | X   |            |      |     |    |                  |         |
| (07)                |    | Explain the relationship between $V_A$ and $V_S$ in a formula, and calculate the values.   | X         | X   |            |      |     |    |                  |         |
| (08)                |    | Explain the significance of $V_A$ and the adverse consequences of applying full, abrupt nose-up elevator deflection when   | X         | X   |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | exceeding $V_A$ .   |           |     |            |      |     |    |                  |         |
| <b>081 06 02 02</b> |    | <b>Factors affecting the manoeuvring-load diagram</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | State the relationship of mass to:<br>— load-factor limits;<br>— accelerated stall speed boundary limit;<br>— $V_A$ and explain why if a single value for $V_A$ is given, it will be at the aeroplane's maximum structural take-off mass and at low altitude. | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Calculate the change of $V_A$ with changing mass.   | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Explain why $V_A$ loses significance at higher altitude where compressibility effects occur.  | X         |     |            |      |     |    |                  |         |
| (04)                | X  | Define ' $M_C$ ' and ' $M_D$ ' and their relation with ' $V_C$ ' and ' $V_D$ '.   | X         |     |            |      |     |    |                  |         |
| <b>081 06 03 00</b> |    | <b>Gust envelope</b>  |           |     |            |      |     |    |                  |         |
| <b>081 06 03 01</b> |    | <b>Gust-load diagram</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Recognise a typical gust-load diagram, and state the minimum gust speeds in ft/s, m/s and kt that the aeroplane must be designed to withstand at $V_B$ to $V_C$ and $V_D$ .   | X         | X   |            |      |     |    |                  |         |
| (02)                |    | Discuss considerations for the selection of $V_{RA}$ .  | X         | X   |            |      |     |    |                  |         |
| (03)                |    | Explain the adverse effects on the aeroplane when flying in turbulence.   | X         | X   |            |      |     |    |                  |         |
| <b>081 06 03 02</b> |    | <b>Factors affecting the gust-load diagram</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe and explain the relationship between the gust-load factor and the following: lift-curve slope, aspect ratio, angle of sweep, altitude, wing loading, weight, wing area, equivalent airspeed (EAS), and speed of vertical gust.                       | X         | X   |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |

|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | flight ( $D = W \sin \gamma$ ).<br>— Apply the formula for forces perpendicular to the direction of flight ( $L = W \cos \gamma$ ).  |           |     |            |      |     |    |                  |         |
| (03)                |    | Describe the relationship between the glide gradient and the lift–drag ratio, and calculate glide range given:<br>— initial height;<br>— L–D ratio;<br>— glide speed and wind speed.   | X         | X   |            |      |     |    |                  |         |
| (04)                |    | Explain the relationship between $\alpha$ , $V_{MD}$ and the best lift–drag ratio.   | X         | X   |            |      |     |    |                  |         |
| (05)                |    | Explain the effect of wind component on glide angle, duration, and distance.   | X         | X   |            |      |     |    |                  |         |
| (06)                |    | Explain the effect of mass change on glide angle, duration, and distance, given that the aeroplane remains at either the same airspeed or at $V_{MD}$ .  | X         | X   |            |      |     |    |                  |         |
| (07)                |    | Explain the effect of configuration change on glide angle and duration.  | X         | X   |            |      |     |    |                  |         |
| (08)                |    | Describe the relation between TAS, gradient of descent, and rate of descent.   | X         | X   |            |      |     |    |                  |         |
| (09)                |    | Describe that the minimum rate of descent in the glide will be at $V_{MP}$ , and explain the relationship of this speed to the optimum speed for minimum glide angle.  | X         | X   |            |      |     |    |                  |         |
| (10)                |    | Discuss when a pilot could elect to fly for minimum glide rate of descent or minimum glide angle, and why speed stability or headwinds/tailwinds may favour a speed that is faster or slower than the optimum airspeed in still air. | X         | X   |            |      |     |    |                  |         |
| <b>081 08 01 05</b> |    | <b>Steady, coordinated turn</b>  |           |     |            |      |     |    |                  |         |

| Syllabus reference | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|--------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                    |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (01)               |    | Describe the forces that act on an aeroplane in a steady, coordinated turn.   | X         | X   |            |      |     |    |                  |         |
| (02)               |    | Resolve the forces that act horizontally and vertically during a coordinated turn ( $\tan \phi = \frac{V^2}{gR}$ ).   | X         | X   |            |      |     |    |                  |         |
| (03)               |    | Describe the difference between a coordinated and an uncoordinated turn, and describe how to correct an uncoordinated turn using turn and slip indicator or turn coordinator. | X         | X   |            |      |     |    |                  |         |
| (04)               |    | Explain why the angle of bank is independent of mass, and that it only depends on TAS and radius of turn.   | X         | X   |            |      |     |    |                  |         |
| (05)               |    | Resolve the forces to show that for a given angle of bank the radius of turn is determined solely by airspeed ( $\tan \phi = \frac{V^2}{gR}$ ).                               | X         | X   |            |      |     |    |                  |         |
| (06)               |    | Calculate the turn radius of a steady turn given TAS and angle of bank.   | X         | X   |            |      |     |    |                  |         |
| (07)               |    | Explain the effects of bank angle on:<br>— load factor ( $LF = 1/\cos \phi$ );<br>— $\alpha$ ;<br>— thrust;<br>— drag.  | X         | X   |            |      |     |    |                  |         |
| (08)               | X  | Define 'angular velocity'.  | X         | X   |            |      |     |    |                  |         |
| (09)               | X  | Define 'rate of turn' and 'rate-1 turn'.  | X         | X   |            |      |     |    |                  |         |
| (10)               |    | Explain the influence of TAS on rate of turn at a given bank angle.   | X         | X   |            |      |     |    |                  |         |
| (11)               |    | Calculate the load factor and stall speed in a turn given angle of  | X         | X   |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |

**SUBJECT 082 — PRINCIPLES OF FLIGHT — HELICOPTERS****(1) VOCABULARY OF MECHANICS**

Speed is a scalar quantity; it has only magnitude.

Velocity is a vector quantity with magnitude and direction.

The velocity of a point on a rotor blade, when rotating around an axis, is the 'linear' or 'tangential' velocity which can be expressed in revolutions per minute (rpm).

Density is the mass of the fluid per unit volume ( $\text{kg/m}^3$ ) in the international system of units of measurement (SI (*Système International*)).

**(2) AERONAUTICAL DEFINITIONS**

A rotor blade is a high-aspect ratio aerofoil attached by its root to the rotor hub with hinges or flexible elements.

A blade element is a spanwise slice of the blade, so thin that the aerodynamic forces involved may be assumed not to vary. The forces produce lift (L), drag (D), and a pitching moment. Such a cross section has a contour, a leading and trailing edge, a chord line, a mean camber line, a maximum thickness or depth, and a thickness-to-chord ratio.

The centre of pressure (CP) is defined as the point on the chord line where the resultant of all aerodynamic forces acts.

The planform is the shape of a blade as seen from above.

The pitch angle (of a blade or an element) is the angle between the chord line and the plane of rotation.

The blade is not twisted when the pitch angle is constant from root to tip.

A blade is twisted when the pitch angle of its elements' sections varies with their distance from the root (in other words, the chord lines of the elements involved are not parallel). Washout exists when the pitch angle decreases towards the blade tip.

The vector sum of the undisturbed upstream velocity (i.e. that found in the plane of rotation of the blades) and the induced velocity is the relative airflow.

The angle between the relative airflow and the chord line of a blade element is the angle of attack ( $\alpha$ ).

Lift is the component of the aerodynamic force on a blade element that is perpendicular to the relative airflow.

Profile drag is the component of the aerodynamic force on a blade element that is parallel to the plane of rotation. Induced drag is the component of the aerodynamic force on a blade element that is parallel to the relative airflow.

Profile drag consists of pressure forces and skin friction acting on the surface of the blade element. The component of profile drag that arises from pressure forces (between the leading and trailing edges) is pressure or form drag. The component of profile drag due to shear forces over the surface is skin friction.

The total rotor thrust is the vertical upwards force from the rotor disc as a whole, as the sum of all the blade thrusts. This term has been reinstated because there is already the term 'rotor thrust' that is used to denote the thrust along the axis of rotation that acts directly opposite the weight of the helicopter in a blade element.

### (3) HELICOPTER CHARACTERISTICS

Disc loading is the mass ( $M$ ) of the helicopter divided by the area of the disc.

Blade loading is the mass divided by the total planform area of the blades.

The area of a rectangular blade is given by the chord multiplied by the blade tip radius. For tapered blades, the mean geometric chord is taken as an approximately equivalent chord.

Rotor solidity is the ratio of the total blade area to the disc area.

### (4) PLANES, AXES AND REFERENCE SYSTEMS OF THE ROTOR

- Shaft axis: The physical axis of the rotor shaft (mast).
- Hub plane: A plane perpendicular to the shaft axis through the centre of the hub.
- Tip path plane: The plane traced out by the blade tips.
- Virtual rotation axis: The axis through the centre of the hub and perpendicular to the tip path plane.
- Rotor disc: The disc traced out by the blade tips in the tip path plane.
- Plane of rotation: The plane parallel to the tip path plane that acts through the hub centre.

### (5) ANGLES OF THE BLADES, INDUCED VELOCITY

- Pitch angle of a blade element: The angle between the chord line of the element and its plane of rotation, sometimes called 'local pitch angle'.
- Blade pitch angle: Taken to be equivalent to the pitch angle of the blade element found at 75 % of the blade radius.
- Flapping angle: The angle between the longitudinal axis of the blade and the hub plane.
- Coning angle: The angle between the longitudinal axis of the blade and the tip path plane. Induced velocity is that induced by the engine power perpendicular to the plane of rotation.

Aerodynamic forces on the blades and the rotor

The thrust from a blade (blade thrust) is the sum of the thrusts from each blade element.

The sum of the thrusts from all blades is the (total) rotor thrust acting perpendicular to the tip path in the direction of the virtual rotation axis.

The result of the induced drag forces on all the blade elements of all blades is a torque on the shaft which, multiplied by the angular velocity of the blade, gives the required induced power.

The result of the profile drag forces is a torque on the shaft which, multiplied by the angular velocity of the blade, gives the required profile power.

## (6) TYPES OF ROTOR HUBS

There are basically four types of rotor hubs in use:

1. Teetering rotor or seesaw rotor: The two blades are connected together; the 'hinge' is on the shaft axis, and the head is underslung. A variation is the gimballed hub; the blades and the hub are attached to the rotor shaft by means of a gimbal or universal joint (Bell 47). It is sometimes called semi-rigid because there is no movement of the blade in a drag-wise sense.
2. Fully articulated rotor: There are more than two rotor blades and each has a flapping hinge, a lead-lag (drag) hinge, and a feathering hinge or bearing.
3. Hingeless rotor: There are no flapping or dragging hinges. They are replaced by flexible elements (virtual hinges) at some part of the blade radius which allow such movements. A feathering bearing allows feathering of the blade.
4. Bearingless rotor: There are no hinges or rotating bearings. Flapping and dragging movements are obtained with flexible elements called elastomeric hinges. Feathering is obtained by twisting the element.

When referring to their equipment, Airbus call this a 'semi-articulated head' (ref.: their training material).

Two remarks:

1. Hinge offset and equivalent hinge offset

The hinge offset is the distance between the shaft axis and the axis of the hinge. Hingeless and bearingless rotors have an equivalent hinge offset.

2. Elastomeric hinges

This bearing consists of alternate layers of elastomer and metal. The flexibility of the elastomer allows flapping, dragging and feathering.

(7) DRAG AND POWERS

Induced power is that required to generate the induced velocity in the rotor disc for the production of lift. For any given thrust, induced power is minimum when the induced velocity is uniform over the rotor disc. This can be approximated by using washout and ensuring that the blades are in track (a truly uniform velocity cannot be obtained).

Rotor profile drag results from those components acting in the opposite direction to the blade velocities (i.e. the sum of all the profile drags from each blade element). The power required to overcome it is rotor profile power (the sum of the powers required to overcome the torque).

Parasite drag is the drag from the helicopter fuselage including that from the rotor hub and all external equipment such as wheels, the winch, external loads, etc. (any drag from the tail rotor is included, but not from the rotor blades, which produce profile drag). The power to overcome this drag is parasite power.

In level flight at constant speed, induced power, rotor profile power and parasite power are summed to give the total power required to drive the main rotor.

Induced power and profile power for the tail rotor are summed to give the power required to drive the tail rotor.

The power required to drive auxiliary services, such as oil pumps and electrical generators, is called accessory or ancillary power. It includes the power required to overcome mechanical friction in transmissions.

The total power required in level flight at constant speed is the sum of all the above.

When transitioning from the hover, the power required decreases as speed increases. This is called translational lift.

The term limited power means that the total power required to hover out of ground effect (HOGF) is greater than the available power.

(8) PHASE ANGLE IN FLAPPING MOVEMENT OF THE BLADE

The movement of the cyclic control tilts the rotor disc in the direction of the intended movement of the helicopter.

For teetering heads, the flapping response is 90° later than the applied cyclic control movement (less than 90° for rotors with offset hinges).

The pitch mechanism consists of the swash plate, and for each blade the pitch mechanism consists of a pitch link attached to the swash plate and a pitch horn attached to the blade.

(9) AXES THROUGH THE CENTRE OF THE HELICOPTER

Longitudinal axis or roll axis: A straight line through the centre of gravity (CG) of the helicopter from the nose to the tail about which the helicopter can roll left or right.

Lateral axis, transverse axis or pitch axis: A straight line through the CG of the helicopter about which the helicopter can pitch its nose up or down (this axis is also perpendicular to the reference plane of the aircraft, which is the plane either side of which the components that constitute the major part of the aircraft are symmetrically disposed in the port and starboard sense).

Normal axis or yaw axis: A straight line perpendicular to the plane defined by the longitudinal and lateral axes and about which the helicopter can yaw.

*Note that the term 'mass' is used to describe a quantity of matter, and 'weight' when describing the force. However, the term 'weight' is normally used in aviation to colloquially describe mass. The professional pilot should always note the units to determine whether the term 'weight' is being used to describe a force (e.g. unit newton) or quantity of matter (e.g. unit kilogram).*

|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | 'chord', 'thickness', 'thickness-to-chord ratio, 'camber line', 'camber', and 'leading-edge radius'.   |           |     |            |      |     |    |                  |         |
| (02)                |    | Describe symmetrical and asymmetrical aerofoil sections.   |           |     | X          | X    | X   |    |                  |         |
| <b>082 01 02 02</b> |    | <b>Aerodynamic forces on aerofoil elements</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Define the angle of attack ( $\alpha$ ).   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Describe:<br>— the resultant force from the pressure distribution and the friction at the element;<br>— the resultant force from the boundary layers and the velocities in the wake; and<br>— the loss of momentum due to friction forces. |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Resolve the aerodynamic force into the components of lift (L) and drag (D).  |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Define the lift coefficient ( $C_L$ ) and the drag coefficient ( $C_D$ ).  |           |     | X          | X    | X   |    |                  |         |
| (05)                |    | Show that the $C_L$ is a function of the $\alpha$ .  |           |     | X          | X    | X   |    |                  |         |
| (06)                |    | Explain how drag is caused by pressure forces on the surfaces of an aerofoil and by friction in the boundary layers. Define the term 'profile drag'.   |           |     | X          | X    | X   |    |                  |         |
| (07)                |    | Define the L–D ratio.  |           |     | X          | X    | X   |    |                  |         |
| (08)                |    | Use the lift and drag equations to show the influence of speed and density on lift and drag for a given $\alpha$ .   |           |     | X          | X    | X   |    |                  |         |
| (09)                |    | Define the action line of the aerodynamic force and the CP.  |           |     | X          | X    | X   |    |                  |         |
| (10)                |    | Know that symmetrical aerofoils have a CP that is approximately a quarter chord behind the leading edge.   |           |     | X          | X    | X   |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| <b>082 01 02 03</b> |    | <b><i>Stall</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the boundary layer separation when $\alpha$ increases beyond the onset of stall and the decrease of lift and the increase of drag. Define the 'separation point'.  |           |     | X          | X    | X   |    |                  |         |
| <b>082 01 02 04</b> |    | <b><i>Disturbances due to profile contamination</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain ice contamination, the modification of the section profile and surfaces due to ice and snow, the influence on L and D and the L–D ratio, the influence on $\alpha$ (at stall onset), and the effect of the increase in weight. |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain the effect of erosion by heavy rain on the blade and subsequent increase in profile drag.  |           |     | X          | X    | X   |    |                  |         |
| <b>082 01 03 00</b> |    | <b><i>Three-dimensional airflow around a blade</i></b>   |           |     |            |      |     |    |                  |         |
| <b>082 01 03 01</b> |    | <b><i>The blade</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the various blade planforms.  |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Define aspect ratio and blade twist.   |           |     | X          | X    | X   |    |                  |         |
| <b>082 01 03 02</b> |    | <b><i>Airflow pattern and influence on lift (L)</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the spanwise flow around a blade and the appearance of blade tip vortices which are a loss of energy.  |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Show that the strength of the vortices increases as $\alpha$ and L increase.   |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Show that downwash causes vortices.  |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Define the relative airflow as the resultant of the undisturbed air velocity and induced velocity, and define $\alpha$ .   |           |     | X          | X    | X   |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (05)                |    | Explain the spanwise L distribution and the way in which it can be modified by twist (washout).  |           |     | X          | X    | X   |    |                  |         |
| <b>082 01 03 03</b> |    | <b><i>Induced drag</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain induced drag and the influence of $\alpha$ and aspect ratio.   |           |     | X          | X    | X   |    |                  |         |
| <b>082 01 03 04</b> |    | <b><i>The airflow around the fuselage</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the fuselage and the external components that cause (parasite) drag, the airflow around the fuselage, and the influence of the pitch angle of the fuselage.<br>Describe fuselage shapes that minimise drag. |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Define profile drag as the sum of pressure (form) drag and skin friction drag.   |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Define 'interference drag'.  |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Know the drag formula.   |           |     | X          | X    | X   |    |                  |         |
| <b>082 02 00 00</b> |    | <b>TRANSONIC AERODYNAMICS AND COMPRESSIBILITY EFFECTS</b>  |           |     |            |      |     |    |                  |         |
| <b>082 02 01 00</b> |    | <b>Airflow speeds and velocities</b>   |           |     |            |      |     |    |                  |         |
| <b>082 02 01 01</b> |    | <b><i>Speeds and Mach number</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Define the speed of sound in air.  |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | State that the speed of sound is proportional to the square root of the absolute temperature (in Kelvins).   |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Explain the variation in the speed of sound with altitude.   |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Define Mach number.  |           |     | X          | X    | X   |    |                  |         |
| (05)                |    | Explain the meaning of incompressibility and compressibility of air;   |           |     | X          | X    | X   |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | relate this to the value of the Mach number.   |           |     |            |      |     |    |                  |         |
| (06)                |    | Define high subsonic, transonic and supersonic flows in relation to the value of the Mach number.  |           |     | X          | X    | X   |    |                  |         |
| <b>082 02 01 02</b> |    | <b>Shock waves</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe shock waves in a supersonic flow and the changes in pressure and speed.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Describe the appearance of local supersonic flows on the surfaces of a blade.  |           |     | X          | X    | X   |    |                  |         |
| <b>082 02 01 03</b> |    | <b>Influence of aerofoil section and blade planform</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the different shapes that allow higher Mach numbers without generating a shock wave on the upper surface, such as:<br>— reducing the section thickness-to-chord ratio;<br>— a planform with a sweep angle. |           |     | X          | X    | X   |    |                  |         |
| <b>082 03 00 00</b> |    | <b>ROTORCRAFT TYPES</b>  |           |     |            |      |     |    |                  |         |
| <b>082 03 01 00</b> |    | <b>Rotorcraft</b>  |           |     |            |      |     |    |                  |         |
| <b>082 03 01 01</b> |    | <b>Rotorcraft types</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the difference between an autogyro and a helicopter.   |           |     | X          | X    | X   |    |                  |         |
| <b>082 03 02 00</b> |    | <b>Helicopters</b>   |           |     |            |      |     |    |                  |         |
| <b>082 03 02 01</b> |    | <b>Helicopter configurations</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe (briefly) the single-main-rotor helicopter and other configurations: tandem, coaxial, side-by-side, synchrocopter (with intermeshing blades), the compound helicopter and tilt rotor.                     |           |     | X          | X    | X   |    |                  |         |
| <b>082 03 02 02</b> |    | <b>The helicopter, characteristics and associated terminology</b>  |           |     |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (01)                |    | Mention the tail rotor, the Fenestron, and the no tail rotor (NOTAR).  |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Define the rotor disc area and the blade area.   |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Describe the teetering rotor with its hinge axis on the shaft axis, and rotors with more than two blades with offset hinge axes.   |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Define the fuselage centre line and the three axes: roll, pitch, and normal (yaw).   |           |     | X          | X    | X   |    |                  |         |
| (05)                |    | Define gross weight and gross mass (and the units involved), disc and blade loading.   |           |     | X          | X    | X   |    |                  |         |
| <b>082 04 00 00</b> |    | <b>MAIN-ROTOR AERODYNAMICS</b>   |           |     |            |      |     |    |                  |         |
| <b>082 04 01 00</b> |    | <b>Hover flight outside ground effect</b>  |           |     |            |      |     |    |                  |         |
| <b>082 04 01 01</b> |    | <b>Airflow through the rotor disc and around the blades</b>  |           |     |            |      |     |    |                  |         |
| (01)                | X  | Based on Newton's second law (momentum), explain that the upward vertical force from the disc, i.e. the rotor thrust, is the result of vertical downward velocities inside the rotor disc.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain why the production of the induced flow requires power applied to the shaft, i.e. induced power. Induced power is least if the induced velocities have the same value on the whole disc (i.e. there is uniformity of flow over the disc). |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Explain why vertical rotor thrust must be higher than the weight of the helicopter because of the vertical drag on the fuselage.   |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Define the pitch angle and the $\alpha$ of a blade element.  |           |     | X          | X    | X   |    |                  |         |
| (05)                |    | Explain L and D relating to a blade element (including induced and profile drag).  |           |     | X          | X    | X   |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (06)                |    | Explain the necessity for collective pitch angle changes, the influence on the $\alpha$ and rotor thrust, and the need for blade feathering.   |           |     | X          | X    | X   |    |                  |         |
| (07)                |    | Describe the different blade shapes (as viewed from above).  |           |     | X          | X    | X   |    |                  |         |
| (08)                |    | Explain how profile drag on the blade elements generates a torque on the main shaft, and define the resulting rotor profile power.   |           |     | X          | X    | X   |    |                  |         |
| (09)                |    | Explain the influence of air density on the required powers.   |           |     | X          | X    | X   |    |                  |         |
| <b>082 04 01 02</b> |    | <b>Anti-torque force and tail rotor</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Using Newton's third law (motion), explain the need for tail-rotor thrust, the required value being proportional to main-rotor torque.<br>Show that tail-rotor power is proportional to tail-rotor thrust. |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain the necessity for feathering of the tail-rotor blades and their control by the yaw pedals, and the maximum and minimum values of the pitch angles of the blades.                                   |           |     | X          | X    | X   |    |                  |         |
| <b>082 04 01 03</b> |    | <b>Total power required and hover outside ground effect (HOGE)</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Define ancillary equipment and its power requirement.  |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Define the total power required.   |           |     | X          | X    | X   |    |                  |         |
| (03)                | X  | Describe the influence of ambient pressure, temperature and moisture on the required power.  |           |     | X          | X    | X   |    |                  |         |
| <b>082 04 02 00</b> |    | <b>Vertical climb</b>  |           |     |            |      |     |    |                  |         |
| <b>082 04 02 01</b> |    | <b>Relative airflow and angles of attack (<math>\alpha</math>)</b>   |           |     |            |      |     |    |                  |         |
| (01)                | X  | Describe the dependence of the vertical climb speed on the opposite vertical air velocity relative to the rotor disk.  |           |     | X          | X    | X   |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|

| (02)                |    | Explain how $\alpha$ is controlled by the collective pitch angle control.  |           |     | X          | X    | X   |    |                  |         |
| <b>082 04 02 02</b> |    | <b>Power and vertical speed</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Define total main-rotor power as the sum of parasite power, induced power, climb power, and rotor profile power.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain why the total main-rotor power required increases when the rate of climb increases.  |           |     | X          | X    | X   |    |                  |         |
| <b>082 04 03 00</b> |    | <b>Forward flight</b>  |           |     |            |      |     |    |                  |         |
| <b>082 04 03 01</b> |    | <b>Airflow and forces in uniform inflow distribution</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the assumption of a uniform inflow distribution on the rotor disc.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Show the upstream air velocities relative to the blade elements and the different effects on the advancing and retreating blades.<br>Define the area of reverse flow.<br>Explain the influence of forward speed on the circumferential speed of the blade tip. |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Assuming constant pitch angles and rigid blade attachments, explain the roll moment from the asymmetric distribution of L.   |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Show that through cyclic feathering this imbalance could be eliminated by a low $\alpha$ (accomplished by a low pitch angle) on the advancing blade, and a high $\alpha$ (accomplished by a high pitch angle) on the retreating blade.                         |           |     | X          | X    | X   |    |                  |         |
| (05)                |    | Describe the high air velocity at the advancing blade tip and the compressibility effects which limit maximum speed.   |           |     | X          | X    | X   |    |                  |         |
| (06)                |    | Describe the low air velocity on the retreating blade tip resulting from the difference between the circumferential speed and  |           |     | X          | X    | X   |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | forward speed, the need for high $\alpha$ , and the onset of stall.   |           |     |            |      |     |    |                  |         |
| (07)                |    | Define the blade tip speed ratio.   |           |     | X          | X    | X   |    |                  |         |
| (08)                |    | Explain the total rotor thrust that is perpendicular to the rotor disc and the need for tilting the thrust vector forward.  |           |     | X          | X    | X   |    |                  |         |
| (09)                |    | Explain the conditions of equilibrium in steady straight and level flight.  |           |     | X          | X    | X   |    |                  |         |
| <b>082 04 03 02</b> |    | <b><i>The flare (powered flight)</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the flare in powered flight, the rearward tilt of the rotor disc and the thrust vector. Show the horizontal thrust component that is in the opposite direction to forward velocity. |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | State the increase in thrust due to the upward inflow, and show the modifications in the $\alpha$ .   |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Explain the increase in rotor rpm for a non-governed rotor.   |           |     | X          | X    | X   |    |                  |         |
| <b>082 04 03 03</b> |    | <b><i>Non-uniform inflow distribution in relation to inflow roll</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the inflow distribution which modifies $\alpha$ and L especially on the advancing and retreating blades.   |           |     | X          | X    | X   |    |                  |         |
| <b>082 04 03 04</b> |    | <b><i>Power and maximum speed</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain that the induced velocities and power values decrease as the speed of the helicopter increases.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Define profile drag and profile power, and the increase in their values with the speed of the helicopter.   |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Define parasite drag and parasite power, and the increase in their values with the speed of the helicopter.   |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Define total drag and its increase with the speed of the helicopter.  |           |     | X          | X    | X   |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (05)                |    | Describe the power required for the tail rotor and the power required by ancillary equipment.  |           |     | X          | X    | X   |    |                  |         |
| (06)                |    | Define the total power requirement as a sum of the above partial powers, and explain how it varies with the speed of the helicopter.   |           |     | X          | X    | X   |    |                  |         |
| (07)                |    | Explain the influence of helicopter mass, air density, and additional external equipment on the partial powers and the total power required.   |           |     | X          | X    | X   |    |                  |         |
| (08)                |    | Describe translational lift and show the decrease in required total power as the helicopter increases its speed from the hover.  |           |     | X          | X    | X   |    |                  |         |
| <b>082 04 04 00</b> |    | <b>Hover and forward flight in ground effect</b>   |           |     |            |      |     |    |                  |         |
| <b>082 04 04 01</b> |    | <b><i>Airflow in ground effect, downwash</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain how the vicinity of the ground changes the downward flow pattern and the consequences on lift (thrust) at constant rotor power. Show that ground effect depends on the height of the rotor above the ground and the rotor diameter. Show the required rotor power at constant all-up mass (AUM) as a function of height above the ground. Describe the influence of forward speed. |           |     | X          | X    | X   |    |                  |         |
| <b>082 04 05 00</b> |    | <b>Vertical descent</b>  |           |     |            |      |     |    |                  |         |
| <b>082 04 05 01</b> |    | <b><i>Vertical descent, power on</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the airflow around the rotor disc in a trouble-free vertical descent, power on, the airflow opposing the helicopter's velocity, the relative airflow, and $\alpha$ .  |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain the vortex-ring state, also known as settling with power. State the approximate vertical descent speeds that allow the formation of vortex ring, related to the values of the induced velocities.  |           |     | X          | X    | X   |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |

| (03)                |    | Describe the airflow relative to the blades, the root stall, the loss of lift at the blade tip, and the turbulence. Show the effect of raising the lever and describe the effects on the controls.                 |           |     | X          | X    | X   |    |                  |         |
| <b>082 04 05 02</b> |    | <b>Autorotation</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | State the need for early recognition and for a quick initiation of recovery. Describe the recovery actions.  |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain that the collective lever must be lowered quickly enough to avoid a rapid decay of rotor rpm due to drag on the blades, and explain the influence of rotational inertia of the rotor on the rate of decay. |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Show the induced flow through the rotor disc, the rotational velocity and relative airflow, the inflow and inflow angles.  |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Show how the aerodynamic forces on the blade elements vary from root to tip and distinguish three zones: the inner stalled region, the middle driving region, and the driven region.                               |           |     | X          | X    | X   |    |                  |         |
| (05)                |    | Explain the control of the rotor rpm with collective pitch.  |           |     | X          | X    | X   |    |                  |         |
| (06)                |    | Show the need for negative tail-rotor thrust with yaw control.   |           |     | X          | X    | X   |    |                  |         |
| (07)                |    | Explain the final increase in rotor thrust caused by raising the collective pitch to decrease the vertical descent speed and the decay in rotor rpm.   |           |     | X          | X    | X   |    |                  |         |
| <b>082 04 06 00</b> |    | <b>Forward flight — autorotation</b>   |           |     |            |      |     |    |                  |         |
| <b>082 04 06 01</b> |    | <b>Airflow at the rotor disc</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the factors that affect inflow angle and $\alpha$ , the autorotative power distribution, and the dissymmetry over the rotor disc in forward flight.  |           |     | X          | X    | X   |    |                  |         |

| <b>082 04 06 02</b> |    | <b><i>Flight and landing</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Show the effect of forward speed on the vertical descent speed.  |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain the effects of gross weight, rotor rpm, and altitude (density) on endurance and range.   |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Explain the manoeuvres for turning and touchdown.  |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Explain the height–velocity curves.  |           |     | X          | X    | X   |    |                  |         |
| <b>082 05 00 00</b> |    | <b>MAIN-ROTOR MECHANICS</b>  |           |     |            |      |     |    |                  |         |
| <b>082 05 01 00</b> |    | <b>Flapping of the blade in hover</b>  |           |     |            |      |     |    |                  |         |
| <b>082 05 01 01</b> |    | <b><i>Intentionally left blank</i></b>   |           |     |            |      |     |    |                  |         |
| <b>082 05 01 02</b> |    | <b><i>Centrifugal turning moment (CTM)</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the centrifugal forces on the mass elements of a blade with pitch applied and the components of those forces. Show how the forces generate a moment that tries to reduce the blade pitch angle. |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain the methods of counteracting CTM with hydraulics, bias springs, and balance masses.  |           |     | X          | X    | X   |    |                  |         |
| <b>082 05 01 03</b> |    | <b><i>Coning angle in the hover</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Define the tip path plane and the coning angle.  |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Show how the equilibrium of the moments about the flapping hinge of lift (thrust) and of the centrifugal force determine the coning angle of the blade (the blade mass being negligible).                |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Justify the lower limit of rotor rpm.  |           |     | X          | X    | X   |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |

|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (04)                |    | Explain the effect of the mass of a blade on the tip path and the tracking.   |           |     | X          | X    | X   |    |                  |         |
| <b>082 05 02 00</b> |    | <b>Flapping angles of the blade in forward flight</b>   |           |     |            |      |     |    |                  |         |
| <b>082 05 02 01</b> |    | <b><i>Forces on the blade in forward flight without cyclic feathering</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Assume rigid attachments of the blade to the hub and show the periodic lift, moment and stresses on the attachment, the ensuing metal fatigue, the roll moment on the helicopter, and justify the necessity for a flapping hinge. |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Assume no cyclic pitch and describe the lift on the advancing and retreating blades.  |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | State the azimuthal phase lag (90° or less) between the input (applied pitch) and the output (flapping angle). Explain flapback (the rearward tilting of the tip path plane and total rotor thrust).                              |           |     | X          | X    | X   |    |                  |         |
| <b>082 05 02 02</b> |    | <b><i>Cyclic pitch (feathering) in forward flight</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Show that in order to assume and maintain forward flight, the total rotor thrust vector must obtain a forward component by tilting the tip path plane.  |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Show how the applied cyclic pitch modifies the lift on the advancing and retreating blades and produces the required forward tilting of the tip path plane and the total rotor thrust.  |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Show the cone described by the blades and define the virtual axis of rotation. Define the plane of rotation.  |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Define the reference system in which the movements are defined: the shaft axis and the hub plane.   |           |     | X          | X    | X   |    |                  |         |
| (05)                |    | Describe the swash plates, the pitch links and horns. Explain how the collective lever moves the non-rotating swash plate up or   |           |     | X          | X    | X   |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | down the shaft axis.   |           |     |            |      |     |    |                  |         |
| (06)                |    | Describe the mechanism by which the desired cyclic blade pitch can be produced by tilting the swash plate with the cyclic stick.   |           |     | X          | X    | X   |    |                  |         |
| (07)                |    | Explain the translational lift effect when the speed increases.  |           |     | X          | X    | X   |    |                  |         |
| (08)                | X  | Justify the increase of the tilt angle of the thrust vector and of the disc in order to increase the speed.  |           |     | X          | X    | X   |    |                  |         |
| <b>082 05 03 00</b> |    | <b>Blade-lag motion in forward flight</b>  |           |     |            |      |     |    |                  |         |
| <b>082 05 03 01</b> |    | <b><i>Forces on the blade in the disc plane (tip path plane) in forward flight</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the Coriolis force due to flapping, the resulting periodic moments in the hub plane, and the resulting periodic stresses which make lead-lag hinges necessary to avoid material fatigue. |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Describe the profile drag forces on the blade elements and the periodic variation of these forces.   |           |     | X          | X    | X   |    |                  |         |
| <b>082 05 03 02</b> |    | <b><i>Intentionally left blank</i></b>   |           |     |            |      |     |    |                  |         |
| <b>082 05 03 03</b> |    | <b><i>Ground resonance</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the movement of the CG of the blades due to lead-lag movements in the multibladed rotor.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Show the effect on the fuselage and the danger of resonance between this force and the fuselage and undercarriage when the gear touches the ground.  |           |     | X          | X    | X   |    |                  |         |
| <b>082 05 04 00</b> |    | <b>Rotor systems</b>   |           |     |            |      |     |    |                  |         |
| <b>082 05 04 01</b> |    | <b><i>See-saw or teetering rotor</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain that a teetering rotor is prone to mast bumping in low-G   |           |     | X          | X    | X   |    |                  |         |

|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
|                     |    | steady hover.   |           |     |            |      |     |    |                  |         |
| (03)                |    | Indicate the forces and the moments about the longitudinal axis in a steady hover.  |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Deduce how the roll angle in a steady hover without wind results from the moments about the longitudinal axis.                        |           |     | X          | X    | X   |    |                  |         |
| (05)                |    | Explain how the cyclic is used to equalise moments about the lateral axis in a steady hover.  |           |     | X          | X    | X   |    |                  |         |
| (06)                |    | Explain the consequence of the cyclic stick reaching its forward or aft limit during an attempt to take off to the hover.             |           |     | X          | X    | X   |    |                  |         |
| (07)                |    | Explain the influence of density altitude on the equilibrium of forces and moments in a steady hover.                                 |           |     | X          | X    | X   |    |                  |         |
| <b>082 07 01 02</b> |    | <b>Forward flight</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain why the vector sum of forces and of moments must be zero in unaccelerated flight.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Indicate the forces and the moments about the lateral axis in steady straight and level flight.                                       |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Explain the influence of AUM on the forces and moments about the lateral axis in forward flight.                                      |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Explain the influence of the CG position on the forces and moments about the lateral axis in forward flight.                          |           |     | X          | X    | X   |    |                  |         |
| (05)                |    | Explain the role of the cyclic stick position in creating equilibrium of forces and moments about the lateral axis in forward flight. |           |     | X          | X    | X   |    |                  |         |
| (06)                |    | Explain how forward speed influences the fuselage attitude.   |           |     | X          | X    | X   |    |                  |         |
| (07)                |    | Describe and explain the inflow roll effect.  |           |     | X          | X    | X   |    |                  |         |
| <b>082 07 02 00</b> |    | <b>Stability</b>  |           |     |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives  | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|--|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |  | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| <b>082 07 02 01</b> |    | <b>Static longitudinal, roll and directional stability</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Define static stability; give an example of static stability and of static instability.            |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain the contribution of the main rotor to speed stability.                                     |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Describe the influence of the horizontal stabiliser on static longitudinal stability.              |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Explain the effect of hinge offset on static stability.  |           |     | X          | X    | X   |    |                  |         |
| (05)                |    | Describe the influence of the tail rotor on static directional stability.                          |           |     | X          | X    | X   |    |                  |         |
| (06)                |    | Describe the influence of the vertical stabiliser on static directional stability.                 |           |     | X          | X    | X   |    |                  |         |
| (07)                |    | Explain the influence of the main rotor on static roll stability.                                  |           |     | X          | X    | X   |    |                  |         |
| (08)                |    | Describe the influence of the longitudinal position of the CG on static longitudinal stability.    |           |     | X          | X    | X   |    |                  |         |
| <b>082 07 02 02</b> |    | <b>Static stability in the hover</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Describe the initial movements of a hovering helicopter after the occurrence of a horizontal gust. |           |     | X          | X    | X   |    |                  |         |
| <b>082 07 02 03</b> |    | <b>Dynamic stability</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Define dynamic stability; give an example of dynamic stability and of dynamic instability.         |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain why static stability is a precondition for dynamic stability.                              |           |     | X          | X    | X   |    |                  |         |

|                     |    | together with the stabiliser and fuselage to dynamic longitudinal stability.                                  |           |     |            |      |     |    |                  |         |
| <b>082 07 02 05</b> |    | <b><i>Roll stability and directional stability</i></b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Know that a large static roll stability together with a small directional stability may lead to a Dutch roll. |           |     | X          | X    | X   |    |                  |         |
| <b>082 07 03 00</b> |    | <b>Control</b>  |           |     |            |      |     |    |                  |         |
| <b>082 07 03 01</b> |    | <b><i>Manoeuvre stability</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain how helicopter control can be limited because of available stick travel.                              |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain how the CG position influences the remaining stick travel.  |           |     | X          | X    | X   |    |                  |         |
| <b>082 07 03 02</b> |    | <b><i>Control power</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the meaning of the control moment.  |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain the importance of the CG position on the control moment.  |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Explain the influence of hinge offset on controllability.   |           |     | X          | X    | X   |    |                  |         |
| <b>082 07 03 03</b> |    | <b><i>Static and dynamic rollover</i></b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Explain the mechanism which causes dynamic rollover.  |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain the required pilot action when dynamic rollover is starting to develop.                               |           |     | X          | X    | X   |    |                  |         |
| <b>082 08 00 00</b> |    | <b>HELICOPTER FLIGHT MECHANICS</b>  |           |     |            |      |     |    |                  |         |
| <b>082 08 01 00</b> |    | <b>Flight limits</b>  |           |     |            |      |     |    |                  |         |
| <b>082 08 01 01</b> |    | <b><i>Hover and vertical flight</i></b>   |           |     |            |      |     |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |
|---------------------|----|---|-----------|-----|------------|------|-----|----|------------------|---------|
|                     |    |   | ATPL      | CPL | ATPL/IR    | ATPL | CPL |    |                  |         |
| (01)                |    | Show the power required for HOGE and HIGE, and the power available.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain the effects of AUM, ambient temperature and pressure, density altitude, and moisture.   |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Describe the rate of climb in a vertical flight.  |           |     | X          | X    | X   |    |                  |         |
| <b>082 08 01 02</b> |    | <b>Forward flight</b>   |           |     |            |      |     |    |                  |         |
| (01)                |    | Compare the power required and the power available as a function of speed in straight and level flight.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Define the maximum speed limited by power and the value relative to $V_{NE}$ and $V_{NO}$ .   |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Use the power graph to determine the speeds of maximum rate of climb and the maximum angle of climb.  |           |     | X          | X    | X   |    |                  |         |
| (04)                |    | Use the power graph to define true airspeed (TAS) for maximum range and maximum endurance, and consider the case of piston engine and turbine engine. Explain the effects of tailwind or headwind on the speed for maximum range. |           |     | X          | X    | X   |    |                  |         |
| (05)                |    | Explain the effects of AUM, pressure and temperature, density altitude, and humidity.   |           |     | X          | X    | X   |    |                  |         |
| <b>082 08 01 03</b> |    | <b>Manoeuvring</b>  |           |     |            |      |     |    |                  |         |
| (01)                |    | Define the load factor, the radius, and the rate of turn.   |           |     | X          | X    | X   |    |                  |         |
| (02)                |    | Explain the relationship between the angle of bank, the airspeed and the radius of turn, and between the angle of bank and the load factor.   |           |     | X          | X    | X   |    |                  |         |
| (03)                |    | Explain the influence of AUM, pressure and temperature, density altitude, and humidity.   |           |     | X          | X    | X   |    |                  |         |

| Syllabus reference  | BK | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     | IR | CB-IR(A) and EIR | Remarks |

## SUBJECT AREA 100 — KNOWLEDGE, SKILLS AND ATTITUDES (KSA)

| Syllabus reference  | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     |
|---------------------|---|-----------|-----|------------|------|-----|
|                     |   | ATPL      | CPL | ATPL /IR   | ATPL | CPL |
| <b>100 00 00 00</b> | <b>KNOWLEDGE, SKILLS AND ATTITUDES (KSA)</b>  |           |     |            |      |     |
| <b>100 01 00 00</b> | <b>ICAO CORE COMPETENCIES</b>   |           |     |            |      |     |
| (01)                | Recognise the ICAO Core Competencies listed below and the associated competency descriptions (ICAO Doc 9995 'Manual of Evidence-based Training'):<br>— Application of Procedures;<br>— Communication;<br>— Aircraft Flight Path Management, automation;<br>— Aircraft Flight Path Management, manual control;<br>— Leadership and Teamwork;<br>— Problem Solving and Decision Making;<br>— Situation Awareness;<br>— Workload Management. | X         | X   | X          | X    | X   |
| <b>100 02 00 00</b> | <b>CORE COMPETENCIES LEARNING OBJECTIVES</b>  |           |     |            |      |     |
| <b>100 02 01 00</b> | <b>Communication</b>  |           |     |            |      |     |
| (01)                | Show the ability to identify whether the recipient is ready and able to receive the information.  | X         | X   | X          | X    | X   |
| (02)                | Show the ability to appropriately select what, when, how and with whom to communicate.  | X         | X   | X          | X    | X   |
| (03)                | Show the ability to communicate clearly, accurately and concisely.  | X         | X   | X          | X    | X   |
| (04)                | Show the ability to confirm whether the recipient correctly understands important information.  | X         | X   | X          | X    | X   |
| (05)                | Show the ability to listen actively and show you understand the information you receive.  | X         | X   | X          | X    | X   |
| (06)                | Show the ability to ask relevant and effective questions.   | X         | X   | X          | X    | X   |

| Syllabus reference  | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     |
|---------------------|---|-----------|-----|------------|------|-----|
|                     |   | ATPL      | CPL | ATPL /IR   | ATPL | CPL |
| (07)                | Show the ability to adhere to standard radio-telephony phraseology.   | X         | X   | X          | X    | X   |
| (08)                | Show the ability to accurately read, interpret, construct and respond to given documentation in English.                          | X         | X   | X          | X    | X   |
| (09)                | Show the ability to correctly interpret non-verbal communication.   | X         | X   | X          | X    | X   |
| (10)                | Show the ability to use appropriate eye contact, body movement and gestures that are consistent with and support verbal messages. | X         | X   | X          | X    | X   |
| <b>100 02 02 00</b> | <b>Leadership and teamwork</b>  |           |     |            |      |     |
| (01)                | Show the ability to create an atmosphere of open communication that encourages participation.                                     | X         | X   | X          | X    | X   |
| (02)                | Show the initiative and the ability to give directions when required.   | X         | X   | X          | X    | X   |
| (03)                | Show the ability to admit mistakes and take responsibility.   | X         | X   | X          | X    | X   |
| (04)                | Show the ability to anticipate and respond appropriately to others' needs.  | X         | X   | X          | X    | X   |
| (05)                | Show the ability to carry out instructions when directed.   | X         | X   | X          | X    | X   |
| (06)                | Show the ability to communicate relevant concerns and intentions.   | X         | X   | X          | X    | X   |
| (07)                | Show the ability to give and receive feedback constructively.   | X         | X   | X          | X    | X   |
| (08)                | Show empathy, respect and tolerance for others.   | X         | X   | X          | X    | X   |
| (09)                | Show the ability to engage others in planning and to allocate activities fairly and appropriately according to others' abilities. | X         | X   | X          | X    | X   |
| (10)                | Show the ability to address and resolve conflicts and disagreement in a constructive manner.                                      | X         | X   | X          | X    | X   |
| (11)                | Show the ability to project self-control.   | X         | X   | X          | X    | X   |
| <b>100 02 03 00</b> | <b>Problem-solving and decision-making</b>  |           |     |            |      |     |

| Syllabus reference  | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     |
|---------------------|---|-----------|-----|------------|------|-----|
|                     |   | ATPL      | CPL | ATPL /IR   | ATPL | CPL |
| (01)                | Show the ability to seek accurate and adequate information from appropriate sources.                              | X         | X   | X          | X    | X   |
| (02)                | Show the ability to identify and verify what and why things have gone wrong.                                      | X         | X   | X          | X    | X   |
| (03)                | Show the ability to employ proper problem-solving strategies.   | X         | X   | X          | X    | X   |
| (04)                | Show the ability to persevere in working through problems.  | X         | X   | X          | X    | X   |
| (05)                | Show the ability to use appropriate and timely decision-making processes.   | X         | X   | X          | X    | X   |
| (06)                | Show the ability to set priorities appropriately.   | X         | X   | X          | X    | X   |
| (07)                | Show the ability to identify and consider options effectively.  | X         | X   | X          | X    | X   |
| (08)                | Show the ability to monitor, review and adapt decisions as required.  | X         | X   | X          | X    | X   |
| (09)                | Show the ability to identify and manage risks.  | X         | X   | X          | X    | X   |
| <b>100 02 04 00</b> | <b>Situation awareness</b>  |           |     |            |      |     |
| (01)                | Demonstrate the ability to identify and assess accurately the general environment as it may affect the operation. | X         | X   | X          | X    | X   |
| (02)                | Demonstrate the ability to identify threats, errors and undesirable aircraft states.                              | X         | X   | X          | X    | X   |
| (03)                | Demonstrate the ability to manage threats, errors and undesirable aircraft states.                                | X         | X   | X          | X    | X   |
| <b>100 02 05 00</b> | <b>Workload management</b>  |           |     |            |      |     |
| (01)                | Show the ability to maintain self-control.  | X         | X   | X          | X    | X   |
| (02)                | Show the ability to plan, prioritise and schedule tasks effectively.  | X         | X   | X          | X    | X   |
| (03)                | Show the ability to manage time effectively when carrying out tasks.  | X         | X   | X          | X    | X   |
| (04)                | Show the ability to offer and accept assistance, delegate when necessary and ask for help early.                  | X         | X   | X          | X    | X   |

| (05)                | Show the ability to manage interruptions, distractions, variations and failures effectively.   | X         | X   | X          | X    | X   |
| <b>100 03 00 00</b> | <b>ADDITIONAL THREAT AND ERROR MANAGEMENT (TEM) RELATED LEARNING OBJECTIVES</b>  |           |     |            |      |     |
| <b>100 03 01 00</b> | <b>Application of knowledge</b>  |           |     |            |      |     |
| (01)                | Demonstrate the ability to complete pre-flight planning in practical exercises.  | X         | X   | X          | X    | X   |
| (02)                | Demonstrate the KSA and TEM relating to phases of flight in the ground training environment.   | X         | X   | X          | X    | X   |
| <b>100 03 02 00</b> | <b>Upset prevention and recovery training (UPRT) and resilience</b>  |           |     |            |      |     |
|                     | <i>Note: Resilience is defined as ‘the ability to recognise, absorb and adapt to disruptions’. It is supported by the pilot’s core competencies and improved by experience, which can be gained by training for unexpected events or situations.</i> |           |     |            |      |     |
| (01)                | Recognise potential upset ‘threats’ and suggest effective ‘threat management’ in scenario situations.  | X         | X   |            |      |     |
| (02)                | Recognise potential upset ‘errors’ and suggest effective ‘error management’ in scenario situations.  | X         | X   |            |      |     |
| (03)                | Explain the causes of and contributing factors to upsets.  | X         | X   |            |      |     |
| (04)                | Demonstrate resilience during scenario and/or other exercises.   | X         | X   | X          | X    | X   |
| (05)                | Show the ability to identify the signs and discuss the effects of stress, fatigue and aviation lifestyle on situation awareness, and how to cope with them in order to maintain situation awareness.   | X         | X   | X          | X    | X   |
| <b>100 04 00 00</b> | <b>MENTAL MATHS</b>  |           |     |            |      |     |
|                     | <i>Note: Demonstrate, in non-calculator test scenarios or scenario exercises, the ability in a time-efficient manner to make correct mental calculation approximations for the following.</i>  |           |     |            |      |     |
| (01)                | Convert between volumes and masses of fuel using range of units.   | X         | X   | X          | X    | X   |
| (02)                | Estimate time, distance and speed.   | X         | X   | X          | X    | X   |

| Syllabus reference | Syllabus details and associated Learning Objectives   | Aeroplane |     | Helicopter |      |     |
|--------------------|---|-----------|-----|------------|------|-----|
|                    |   | ATPL      | CPL | ATPL /IR   | ATPL | CPL |
| (03)               | Estimate the rate of climb or rate of descent, distance and time.   | X         | X   |            |      |     |
| (04)               | Add or subtract time, distance, and fuel mass.  | X         | X   | X          | X    | X   |
| (05)               | Calculate fuel burn given time and fuel flow.   | X         | X   | X          | X    | X   |
| (06)               | Calculate the time available (for decision-making) given relevant fuel information.                               | X         | X   | X          | X    | X   |
| (07)               | Determine the top of descent using a simple method that is described by the approved training organisation (ATO). | X         | X   |            |      |     |
| (08)               | Determine the values that vary by a percentage, e.g. dry-to-wet landing distance and fuel burn.                   | X         | X   | X          | X    | X   |
| (09)               | Estimate heights at distances on a 3-degree glideslope.   | X         | X   | X          | X    | X   |
| (10)               | Estimate headings using the 1-in-60 rule.   | X         | X   | X          | X    | X   |
| (11)               | Estimate headwind and crosswind components given wind speed and direction and runway in use.                      | X         | X   | X          | X    | X   |
